January 31, 2026

Program Summary

This report presents the results from groundwater monitoring and corrective action events that occurred at Great River Energy's Stanton Station in 2025 to meet the requirements of the United States Environmental Protection Agency's Coal Combustion Residuals rule (40 Code of Federal Regulations 257.90 through 257.98) and the North Dakota Department of Environmental Quality's Coal Combustion Residuals rule (North Dakota Administrative Code 33.1-20-08).

The Bottom Ash Landfill entered 2025 in assessment monitoring under a corrective measures program. Samples were collected in the first quarter (Q1), second quarter (Q2), and fourth quarter (Q4) of 2025. The Bottom Ash Landfill remains in assessment monitoring at the end of 2025. An evaluation of corrective measures is ongoing.

The Bottom Ash Impoundment entered 2025 in assessment monitoring. Samples were collected in Q1, Q2, and Q4 of 2025. An assessment of corrective measures report was completed in September 2025 for the Bottom Ash Impoundment. The Bottom Ash Impoundment remains in assessment monitoring at the end of 2025. An evaluation of corrective measures is ongoing.

Detection Monitoring Summary

Comparative statistics for detection monitoring samples collected in Q4 2024 and Q2 2025 were completed in 2025. Identified statistically significant increases (SSIs) are summarized in the table below. Comparative statistics for the Q4 2024 detection monitoring sampling event will be completed within 90 days of receipt of the final analytical results in Q1 2025.

Table PS-1: Summarized Statistically Significant Increases

Unit	Well	Location	Parameter	Q4 2024 Statistical Event	Q2 2025 Statistical Event
Background	MW-6B	Side-gradient	Chloride	Ongoing Verified SSI	No Sample – Assumed Ongoing Verified SSI
	MW-7A	Upgradient	Field-Measured pH	Within compliance	Potential Exceedance – False Positive
			Total Dissolved Solids	Potential Exceedance – New SSI	Ongoing Verified SSI
	MW-7B	Upgradient	Chloride	Ongoing Verified SSI	No Sample – Assumed Ongoing Verified SSI
Bottom Ash Landfill	MW-9N	Downgradient	Calcium	Ongoing Verified SSI	Ongoing Verified SSI
			Chloride	Ongoing Verified SSI	No Sample – Assumed Ongoing Verified SSI
			Fluoride	Ongoing Verified SSI	Ongoing Verified SSI
			Field-Measured pH	Ongoing Verified SSI	Ongoing Verified SSI

Unit	Well	Location	Parameter	Q4 2024 Statistical Event	Q2 2025 Statistical Event
			Total Dissolved Solids	Ongoing Verified SSI	Ongoing Verified SSI
	MW-102	Downgradient	Field-Measured pH	Ongoing Verified SSI	Ongoing Verified SSI
	MW-103	Downgradient	Boron	Ongoing Verified SSI	Ongoing Verified SSI
			Calcium	Ongoing Verified SSI	Ongoing Verified SSI
			Chloride	Ongoing Verified SSI	No Sample – Assumed Ongoing Verified SSI
			Fluoride	Ongoing Verified SSI	Ongoing Verified SSI
			Field-Measured pH	Ongoing Verified SSI	Ongoing Verified SSI
			Sulfate	Ongoing Verified SSI	Ongoing Verified SSI
			Total Dissolved Solids	Ongoing Verified SSI	Ongoing Verified SSI
Bottom Ash Impoundment	MW-202	Downgradient	Boron	Potential Exceedance – False Positive	Within compliance
			Sulfate	Potential Exceedance – False Positive	Within compliance
	MW-203	Downgradient	Boron	Ongoing Verified SSI	Ongoing Verified SSI
			Sulfate	Ongoing Verified SSI	Ongoing Verified SSI
			Total Dissolved Solids	Ongoing Verified SSI	Ongoing Verified SSI

Assessment Monitoring Summary

Comparative statistics following the Q4 2024, Q1 2025, and Q2 2025 assessment monitoring sampling events for the Bottom Ash Landfill were completed in 2025. No new statistically significant levels (SSLs) were detected in 2025. Arsenic was detected at an SSL above the groundwater protection standard (GWPS) at MW-103 for the Q4 2024, Q1 2025, and Q2 2025 assessment monitoring comparative statistical events. Comparative statistics following the Q4 2025 assessment monitoring sampling event will be completed within 90 days of receipt of the final analytical results (Q1 2026).

Comparative statistics following the Q4 2024, Q1 2025, and Q2 2025 assessment monitoring sampling events for the Bottom Ash Impoundment were completed in 2025. Molybdenum was detected at an SSL above the GWPS at MW-201 for the Q4 2024, Q1 2025, and Q2 2025 assessment monitoring comparative statistical events. An arsenic SSL above the GWPS was detected at MW-203 for the Q1 2025 and Q2 2025 assessment monitoring comparative statistical events. Comparative statistics following the Q4 2025 assessment monitoring sampling event will be completed within 90 days of receipt of the final analytical results (Q1 2026).

Assessment of Corrective Measures – Bottom Ash Landfill

An assessment of corrective measures in response to the arsenic SSL at the Bottom Ash Landfill was initiated in June 2022 and completed in November 2022. The evaluation of corrective measures continued throughout 2025 with a public meeting and remedy selection not yet completed, and remedial actions not yet initiated. The following key efforts were completed in 2025:

- A sampling and analysis plan was prepared for collecting groundwater and soil samples for a bench-scale study for chemical injection (WSP 2025b).
- Samples were collected for a second phase bench-scale study for chemical injection downgradient of the Bottom Ash Landfill in June 2025.
- A semi-annual report describing progress in remedy selection was completed in July 2024 (WSP 2025c).
- Preliminary results of the Phase 2 bench-scale study for chemical injection were received.
- Progress was discussed with the NDDEQ during a meeting in October 2025.

Evaluation of corrective measures will continue in 2026. The following activities are planned for the next 6 months:

- A public meeting is scheduled in February 2026 to discuss the results of the assessment of corrective measures.
- After considering feedback from the NDDEQ and received during the public meeting, a remedy selection report will be submitted to the NDDEQ for review and approval.
- Continue to evaluate the extent of the arsenic plume downgradient of the Bottom Ash Landfill and evaluation of options addressing turbidity issues in the nature and extent wells.

Assessment of Corrective Measures – Bottom Ash Impoundment

An assessment of corrective measures to address the molybdenum and arsenic SSLs at the Bottom Ash Impoundment was initiated in June 2025 and completed in September 2025. The evaluation of corrective measures continued throughout 2025 with a public meeting and remedy selection not yet completed, and remedial actions not yet initiated.

Evaluation of corrective measures will continue in 2026 with the following activities planned in the next 6 months prior to the next semi-annual report.

- Additional delineation of the molybdenum and arsenic plumes at the Bottom Ash Impoundment.
- Planning for additional nature and extent wells as needed.
- Review of ongoing soils analysis.
- A Tier I MNA evaluation will be completed.

1.0 INTRODUCTION

WSP USA Inc. (WSP) has prepared this report of the 2025 groundwater sampling and comparative statistical analysis and corrective actions for Great River Energy's (GRE) Stanton Station to meet the requirements of:

- The United States Environmental Protection Agency's (USEPA) Coal Combustion Residuals (CCR) rule (40 Code of Federal Regulations [CFR] 257.90 through 257.98), hereafter referred to as the Federal CCR rule
- The North Dakota Department of Environmental Quality's (NDDEQ) CCR rule (North Dakota Administrative Code [NDAC] 33.1-20-08), hereafter referred to as the State CCR rule
- NDDEQ Permit Number 0043 in accordance with NDAC Article 33.1-20, Solid Waste Management and Land Protection
- The current site *Groundwater Monitoring Plan* (GMP; GAI 2019a)
- The current *Coal Combustion Residuals Groundwater Monitoring System Certification* (GAI 2020)
- The current *Coal Combustion Residuals Groundwater Statistical Method Certification* (GAUSA 2021a)

1.1 Purpose

The Federal CCR rule established specific requirements for reporting groundwater monitoring and corrective actions in 40 CFR 257.90 to 40 CFR 257.98. In accordance with Part (e) of 40 CFR 257.90, owners and operators of CCR landfills and surface impoundments that received CCR waste on or after October 17, 2015, must prepare a groundwater monitoring and corrective action report annually.

NDAC Chapter 33.1-20-08-06 established North Dakota-specific requirements for groundwater monitoring and corrective action reporting, which mirror the reporting requirements of the Federal CCR rule (Part (e) of NDAC 33.1-20-08-06.1).

1.2 Site Background

Stanton Station was a coal-fired electric generation facility located along the Missouri River in Mercer County, approximately 3 miles southeast of Stanton, North Dakota. Stanton Station began generating power in 1966 and CCRs were managed in composite-lined surface water impoundment cells and dry waste units regulated and permitted by the NDDEQ. Stanton Station ceased power production in February 2017, demolition of the industrial site was finished in 2019, and site restoration completed in 2020.

Stanton Station has two CCR units covered by the Federal and State CCR rules:

- Bottom Ash CCR Landfill (Bottom Ash Landfill)
- Bottom Ash CCR Surface Impoundment (Bottom Ash Impoundment)

Locations of the CCR units and groundwater monitoring wells are shown in Figure 1 through Figure 3.

1.3 Site Closure and Restoration

CCR unit closure and site restoration activities began in 2019 and were completed in the summer of 2020. Activities included closure of the Bottom Ash Landfill and Bottom Ash Impoundment and regrading the former industrial site to promote stormwater drainage and vegetative growth.

The north and center cells of the Bottom Ash Impoundment were closed by removal of CCR and liner systems in the fall of 2019. Bottom ash in the north and center cells along with the geomembrane liner and clayey soils underlying the geomembrane liner were excavated and placed either in the south cell of the Bottom Ash Impoundment or the Bottom Ash Landfill. The south cell of the Bottom Ash Impoundment was closed with permitted wastes remaining in place and in accordance with the final cover design outlined in the *Closure and Post-closure Plan* (GAI 2019b).

The Bottom Ash Landfill was closed by consolidating the landfill footprint, then closing with permitted wastes remaining in place and in accordance with the final cover design outlined in the *Closure and Post-closure Plan* (GAI 2019c). This included removing CCR and soil from the west end of the permitted footprint and placing the removed materials on the east end where disposal had historically occurred. A new soil berm was also constructed along the new west edge of CCR placement.

As part of the power plant demolition, bottom ash and economizer ash from the plant and construction and demolition material from plant demolition activities, as well as coal and coal yard soil, were placed in the Bottom Ash Landfill or the south cell of the Bottom Ash Impoundment, as approved through the NDDEQ state permit program.

2.0 GROUNDWATER MONITORING NETWORK PROGRAM STATUS

Prior to second quarter (Q2) 2019, the CCR groundwater monitoring system at Stanton Station consisted of a total of 12 monitoring locations (five background and seven downgradient wells). During site restoration, two monitoring wells were abandoned downgradient of the Bottom Ash Landfill as part of construction, leading to an interim period in 2019 and 2020 where the network consisted of five background and five downgradient wells. Following completion of site restoration in 2020, three additional downgradient monitoring wells were installed. The current monitoring locations are shown in Figure 1 through Figure 3 and listed in Table 1. Additional information on the groundwater monitoring system can be found in the *Coal Combustion Residuals Groundwater System Certification* (Rev. 1, GAI 2020). Each CCR unit is currently part of a monitoring network with at least one upgradient and three downgradient wells.

The groundwater monitoring system at Stanton Station is currently divided as follows:

- The background monitoring wells are located south and west of the CCR units. Based on groundwater elevations, groundwater flow directions, and the distance from the CCR units (see Figure 1 through Figure 3), the background wells are not expected to have been influenced by past or current CCR deposition. There are four upgradient monitoring wells (MW-7A, MW-7B, MW-8B, and MW-105) and one side-gradient monitoring well (MW-6B) shared between the CCR units.
- The Bottom Ash Landfill has three downgradient monitoring wells (MW-102, MW-9N, and MW-103).
- The Bottom Ash Impoundment has three downgradient monitoring wells (MW-201, MW-202, and MW-203).
    - MW-1R and MW-104 were removed from the monitoring network for the Bottom Ash Impoundment in June 2023 with the approval of NDDEQ (NDDEQ 2023a), due to the distance of the wells from the current unit boundary. While the wells have been removed from the monitoring network, they have been retained to provide additional downgradient information. MW-1R and MW-104 were sampled throughout 2025.

In addition to the monitoring networks, additional wells have previously been installed in support of the nature and extent investigation both upgradient and downgradient of the Bottom Ash Landfill, as well as at the downgradient property boundary (WSP 2023a, WSP 2024a). Additional locations have also been installed in 2025 in support of the nature and extent investigation downgradient of the Bottom Ash Impoundment (see Section 2.2). These wells were installed to meet the requirements of 40 CFR 257.95(g)(1)(i) and (g)(1)(iii) and NDAC 33.1-20-08-06(5)(g)(1)(a) and (5)(g)(1)(c). Names and locations of the additional wells are shown in Figure 1 through Figure 3 and listed in Table 1. These additional wells have not been included in the monitoring network for detection and assessment statistical monitoring. Samples from the additional wells are primarily intended for plume delineation associated with the assessment monitoring program at the Bottom Ash Landfill but may also be used in evaluating corrective measures. Statistical analysis is not performed for these wells.

2.1 Completed Key Actions in 2025

The following key actions were completed in 2025:

- The 2024 annual CCR groundwater monitoring and corrective action report was completed and placed in the operating record and on the publicly accessible CCR website (WSP 2025a).
- Comparative statistical analysis was completed for the November (fourth quarter [Q4]) 2024 detection monitoring samples for the network wells within 90 days of receipt of the final analytical results.
    - Resamples were collected in March 2025 for the parameters identified as potential exceedances for the Q4 detection monitoring statistics during a monitoring event separate from the regularly scheduled detection monitoring samples.
- Comparative statistical analysis was completed for the November (Q4) 2024 assessment monitoring samples for the Bottom Ash Landfill downgradient network wells within 90 days of receipt of final analytical results.
- Comparative statistical analysis was completed for the Q4 2024 assessment monitoring samples for the Bottom Ash Impoundment downgradient network wells within 90 days of receipt of final analytical results. Molybdenum at monitoring well MW-201 was identified at a statistically significant level (SSL) above the site GWPS following the Q4 2024 event.
- Following the molybdenum SSL identification at MW-201, GRE initiated an assessment of corrective measures at the Bottom Ash Impoundment. GRE posted a notification regarding the initiation of an assessment of corrective measures for the Bottom Ash Impoundment on the publicly accessible website and provided a copy to the NDDEQ.
- Assessment monitoring samples were collected in March (first quarter [Q1]) 2025, June (Q2) 2025, and November (Q4) 2025 for the background locations, the Bottom Ash Landfill downgradient wells, the Bottom Ash Landfill nature and extent wells, the property boundary locations, and the Bottom Ash Impoundment downgradient wells. Samples collected for assessment monitoring were analyzed for the assessment monitoring constituent list in the Federal and State CCR rules.
- Comparative statistical analysis was completed for the Q1 2025 and Q2 2025 assessment monitoring samples from the Bottom Ash Landfill and the Bottom Ash Impoundment downgradient network wells within 90 days of receipt of the final analytical results. Arsenic at monitoring well MW-203 was identified at an SSL above the site GWPS following the Q1 2025 event.

- Detection monitoring samples were collected in June (Q2) 2025 and November (Q4) 2025 for the background locations, the Bottom Ash Landfill downgradient wells, the Bottom Ash Landfill nature and extent wells, the property boundary locations, and the Bottom Ash Impoundment downgradient wells. Samples collected for detection monitoring were analyzed for the detection monitoring constituent list associated with the Federal and State CCR rules.
- Comparative statistical analysis was completed for the June (Q2) 2025 detection monitoring samples from the network wells within 90 days of receipt of the final analytical results.
    - Resamples were collected for the parameters identified as potential exceedances for the Q2 detection monitoring statistics during a monitoring event separate from the regularly scheduled detection monitoring samples in October 2025.
- An investigation to mitigate excess turbidity identified in samples collected from the Bottom Ash Landfill nature and extent wells and the property boundary locations was conducted throughout 2025.
- A sampling and analysis plan was prepared for collecting groundwater and soil samples for a bench-scale study for chemical injection as a possible corrective measure for the Bottom Ash Landfill (WSP 2025b).
- Samples were collected for additional bench-scale testing for chemical injection downgradient of the Bottom Ash Landfill as a potential corrective measure in June 2025.
- Following identification of the SSLs at MW-201 and MW-203, monitoring wells were drilled and installed downgradient of the Bottom Ash Impoundment to meet the requirements of 40 CFR 257.95(g)(1)(i) and NDAC 33.1-20-08-06(5)(g)(1)(a). Section 2.2 includes a discussion of the installed wells.
- Geochemical and mineralogical testing was performed on samples collected from the nature and extents wells installed downgradient of the Bottom Ash Impoundment.
- A semi-annual corrective measures report was completed in July 2025 for the Bottom Ash Landfill (WSP 2025c).
- Additional geochemical modeling was completed to support evaluation of chemical injection as a possible corrective measure for the Bottom Ash Landfill.
- The second phase of the bench-scale study for chemical injection as a potential corrective measure for the Bottom Ash Landfill was completed using samples collected in June 2025.
- A meeting was held with the NDDEQ to discuss the assessment of corrective measures for the Bottom Ash Landfill.
- An assessment of corrective measures was completed for the Bottom Ash Impoundment in September 2025 (WSP 2025d) and provided to the NDDEQ for review.
- Samples were collected in September (third quarter [Q3]) and November (Q4) 2025 from the wells installed in 2025 and analyzed for the detection monitoring and assessment monitoring parameter lists.

2.2 Installation and Decommissioning of Wells

Eight monitoring wells were installed at Stanton Station in June 2025 to characterize the nature and extent of arsenic and molybdenum downgradient of the Bottom Ash Impoundment, per the requirements of 40 CFR 257.93(g)(1)(i) and NDAC 33.1-20-08-06(5)(g)(1)a). The nature and extent wells are divided as follows:

- Four monitoring wells (MW-223, MW-224, MW-225, and MW-226) to the north and northeast of the Bottom Ash Impoundment near MW-201, to characterize molybdenum downgradient of the Bottom Ash Impoundment.
- One deeper well for characterization of the site bedrock (MW-230) adjacent to MW-201.
- Three monitoring wells (MW-227, MW-228, and MW-229) to the east of the Bottom Ash Impoundment near MW-203, to characterize arsenic downgradient of the Bottom Ash Impoundment.

Additionally, a monitoring well was installed at the downgradient property boundary adjacent to the Missouri River in the direction of groundwater flow to meet the requirements of 40 CFR 257.95(g)(1)(iii) and NDAC 33.1-20-08-06(5)(g)(1)(iii). MW-PB1R was installed adjacent to existing well MW-PB1 at a deeper depth, based on observed low water levels within MW-PB1.

Information regarding the wells installed in 2025 is included in Appendix A.

No wells were decommissioned from the Stanton Station CCR monitoring well networks in 2025.

2.3 Problems and Resolutions

There were no significant issues during the sampling and analysis conducted in 2025. The minor problems identified throughout 2025 and the associated resolutions are discussed in the following subsections.

2.3.1 Q4 2024 Resampling Event

During collection of the resamples required for completion of the Q4 2024 statistical analysis, samples were collected from MW-201 on two separate dates (March 19 and March 21, 2025), due to an oversight during sampling on March 19 that resulted in the required sample bottles for the resample parameters not being filled. Results are considered acceptable.

No further issues were encountered with the sampling or analysis of the Q4 2024 resampling event.

2.3.2 Q1 2025 Sampling Event

Samples for the Q1 2025 monitoring event were collected by field staff from Minnesota Valley Testing Laboratories (MVTL). No issues were encountered during the sampling of the background and downgradient network wells associated with the Bottom Ash Landfill and Bottom Ash Impoundment.

Chemical analysis was conducted at the MVTL location in Bismarck, North Dakota, with radiochemical analysis subcontracted to Energy Laboratories, Inc. (ELI) in Casper, Wyoming. Metals on the assessment monitoring parameter list were analyzed as total metals for CCR reporting purposes.

Q1 2025 results for MW-7A (upgradient) for the following parameters were noted in the laboratory analytical narrative as having recovery of the internal standard outside of acceptance limits, resulting in the associated sample results being reported as non-detects with elevated reporting limits:

- Antimony, elevated reporting limit equals 0.002 milligrams per liter (mg/L), typical reporting limit equals 0.001 mg/L
- Arsenic, elevated reporting limit equals 0.008 mg/L, typical reporting limit equals 0.002 mg/L
- Cadmium, elevated reporting limit equals 0.001 mg/L, typical reporting limit equals 0.0005 mg/L
- Chromium, elevated reporting limit equals 0.008 mg/L, typical reporting limit equals 0.002 mg/L
- Cobalt, elevated reporting limit equals 0.008 mg/L, typical reporting limit equals 0.002 mg/L
- Selenium, elevated reporting limit equals 0.02 mg/L, typical reporting limit equals 0.005 mg/L

Additionally, molybdenum was reported with the same note within the laboratory narrative, with an accompanying elevated reporting limit, but with a detected result. While not reflective of the typical reporting limits, the elevated reporting limits for the Q1 2025 event are similar to other previously reported results with elevated reporting limits for MW-7A. Further, the results are considered appropriate for reporting of the Q1 2025 results based on the associated quality control information provided by the laboratory.

No further issues were encountered with the analysis of the Q1 2025 sampling event.

2.3.3 Q2 2025 Sampling Event

Samples for the Q2 2025 monitoring event were collected by field staff from MVTL. No issues were encountered during the sampling of the background and downgradient network wells associated with the Bottom Ash Landfill and Bottom Ash Impoundment.

Chemical analysis was conducted at the MVTL location in Bismarck, North Dakota, with radiochemical analysis subcontracted to ELI in Casper, Wyoming. Metals on the assessment monitoring parameter list were analyzed as total metals for CCR reporting purposes.

During the Q2 2025 detection monitoring sampling event, chloride was mistakenly not included in the analysis of the collected samples for the CCR facilities (background and downgradient network wells associated with the Bottom Ash Landfill and Bottom Ash Impoundment, along with accompanying non-program locations). Although chloride was included in the required parameter list provided to the sampler and analytical laboratory (MVTL), an oversight during check-in of the samples at the analytical laboratory resulted in the parameter not being analyzed. This oversight was not initially identified during data review following receipt of the analytical results, preventing analysis of the missing parameter prior to disposal of the remaining sample volume.

Great River Energy did not pursue collection of new samples for chloride for the Q2 2025 event for two reasons. First, based on the timing of the identification of the issue, collection of make-up samples for chloride would not provide additional information regarding the Q2 2025 groundwater conditions. Second, based on the status of the monitoring program (in assessment of corrective measures for both the Bottom Ash Landfill and Bottom Ash Impoundment), the results of the chloride analysis will not change the current program status for the impacted units. To prevent similar issues in the future, MVTL has made an adjustment to the site-specific check-in list for future samples.

Q2 2025 results for MW-7A (upgradient) for the following parameters were noted in the laboratory analytical narrative as having recovery of the internal standard outside of acceptance limits, resulting in the associated sample results being reported as non-detects with elevated limits:

- Antimony, elevated reporting limit equals 0.004 mg/L, typical reporting limit equals 0.001 mg/L
- Arsenic, elevated reporting limit equals 0.004 mg/L, typical reporting limit equals 0.002 mg/L
- Cadmium, elevated reporting limit equals 0.002 mg/L, typical reporting limit equals 0.0005 mg/L
- Chromium, elevated reporting limit equals 0.004 mg/L, typical reporting limit equals 0.002 mg/L
- Cobalt, elevated reporting limit equals 0.004 mg/L, typical reporting limit equals 0.002 mg/L
- Lead, elevated reporting limit equals 0.001 mg/L, typical reporting limit equals 0.0005 mg/L
- Selenium, elevated reporting limit equals 0.01 mg/L, typical reporting limit equals 0.005 mg/L
- Thallium, elevated reporting limit equals 0.001 mg/L, typical reporting limit equals 0.0005 mg/L

While not reflective of the typical reporting limits, the elevated reporting limits for the Q2 2025 event are similar to other previously reported results with elevated reporting limits for MW-7A for most parameters. The Q2 2025 elevated reporting limits for antimony and cadmium at MW-7A are higher than previously reported reporting limits but remain well below the established groundwater protection standards for the site. Further the results are considered appropriate for reporting of the current results based on the associated quality control information provided by the laboratory.

No further issues were encountered with the analysis during the Q2 2025 sampling event.

2.3.4 Q3 2025 Sampling Event

During the initial sampling in Q3 2025 of the Bottom Ash Impoundment nature and extent wells that were installed in June 2025, wells MW-224, MW-227, and MW-229 had insufficient recharge during sampling to allow for collection of a complete set of sample bottles for the detection monitoring and assessment monitoring sampling lists. Samples were not collected for radiochemical analysis from each of the three monitoring locations. Water levels will continue to be monitored at the wells and complete samples collected when sufficient recharge is available.

Additionally, the laboratory noted that one of the collected bottles for the MW-227 sample varied in color from the remainder of the sample set. The laboratory narrative indicates that this change may have been a result of a change within the well during sampling. Changes within the water quality are likely to have been a result of the significant drawdown and minimal recharge at the well over the course of sampling. Results were discussed with the laboratory prior to receipt. As the first set of samples from the well with no other points of comparison, the results are considered acceptable but may be flagged as outliers following additional sample collection.

Due to a misunderstanding with the analytical laboratory, additional samples were collected in Q3 2025 for MW-8B (U) and MW-201 for field parameters and total dissolved solids. These samples have been reported but have not been analyzed statistically as they were not required by any program.

No further issues were encountered with either the sample collection or analysis during the Q3 2025 sampling event that required resolution.

2.3.5 Q2 2025 Resampling Event

No issues were encountered with the sampling or analysis of the Q2 2025 resampling event that required resolution.

2.3.6 Q4 2025 Sampling Event

During the Q4 2025 sampling event, the dedicated pump at well MW-1R was removed and re-installed due to the check valve ball becoming stuck.

During the Q4 2025 sampling of the Bottom Ash Impoundment nature and extent wells that were installed in June 2025, wells MW-224, MW-225, MW-227, MW-228, and MW-229 had insufficient recharge during sampling to allow for collection of a complete set of sample bottles for the detection monitoring and assessment monitoring sampling lists. Based on the available recharge, samples were not collected for radiochemical analysis from MW-224, MW-225, MW-228, and MW-229. At MW-227, a partial sample (less than the required 1-gallons sample volume) was collected for analysis. Water levels will continue to be monitored at the wells and complete samples collected when sufficient recharge is available.

No further issues were encountered with either the sample collection or analysis during the Q4 2025 sampling event that required resolution.

2.4 Key Activities for 2026

The following key groundwater monitoring activities are planned for 2026:

- The 2025 annual CCR groundwater monitoring and corrective action report (i.e., this report) will be completed and placed in the operating record and on the publicly accessible CCR website. This report will also be provided to the NDDEQ for review and approval.
- Comparative statistical analysis for the Q4 2025 detection monitoring samples from network wells will be completed within 90 days of receipt of the final analytical results.
- Comparative statistical analysis for the Q4 2025 assessment monitoring samples from network wells will be completed within 90 days of receipt of the final analytical results.
- Detection monitoring sampling events consisting of the detection monitoring parameters will occur semi-annually in 2026 in Q2 and Q4, Comparative statistical analysis for the collected detection monitoring samples from network wells will be completed within 90 days of receipt of the final analytical results.
- Assessment monitoring sampling events, consisting of a minimum of three events (one annual sampling event during Q1 2026 for the complete assessment monitoring sampling list and at least two additional sampling events [Q2 and Q4 2026] consisting of the detected assessment monitoring parameters), will occur for the background wells (upgradient and side-gradient), downgradient Bottom Ash Landfill wells, nature and extent wells associated with the Bottom Ash Landfill, the downgradient Bottom Ash Impoundment wells, and the nature and extent wells associated with the Bottom Ash Impoundment. Comparative statistical analysis for the downgradient network wells will be completed within 90 days of receipt of the final analytical results.
- Semi-annual reports detailing progress towards remedy selection under the assessment of corrective measures for the Bottom Ash Landfill and the Bottom Ash Impoundment will be completed by January 31, 2026 (this report) and July 31, 2026.

3.0 GROUNDWATER MONITORING ANALYTICAL PROGRAM STATUS

Analytical activities associated with the groundwater monitoring program are described in the following sections.

3.1 Collected Samples

Throughout 2025, samples were collected by field staff from MVTL. Precise dates for the collection of each sample can be found in the tables included in Appendix B.

- Confirmatory resamples associated with the Q4 2024 detection monitoring statistical analysis were collected in March 2025 during a monitoring event separate from the regularly scheduled detection monitoring samples.
- Detection monitoring samples were collected from the background locations, the Bottom Ash Landfill downgradient wells, and the Bottom Ash Impoundment downgradient wells in June (Q2) and November (Q4) 2025.
- Confirmatory resamples associated with the Q2 2025 detection monitoring statistical analysis were collected in October 2025 during a monitoring event separate from the regularly scheduled detection monitoring samples.
- Assessment monitoring samples were collected from the background locations, the Bottom Ash Landfill downgradient wells, the Bottom Ash Landfill nature and extent wells, the property boundary locations, and the Bottom Ash Impoundment downgradient wells in March (Q1), June (Q2), and November (Q4) 2025.
- Following installation of the Bottom Ash Impoundment nature and extent wells, samples were collected in September (Q3) and November (Q4) 2025.

Samples were collected using low-flow methodology. The sampling procedures and field-testing methods are in accordance with USEPA-accepted procedures and the site groundwater monitoring plan (GAI 2019a).

3.1.1 Groundwater Elevation and Flow Rate

Depths to groundwater were measured at sampled wells during each sampling event prior to purging. Groundwater elevations can be found in Appendix B. Groundwater elevations from the Q1 2025, Q2 2025, and Q4 2025 monitoring events are shown in Figure 1 through Figure 3. The groundwater elevations in the uppermost groundwater at the Stanton Station CCR facilities are consistent with historical values and demonstrate that groundwater generally flows to the north and northeast towards the Missouri River.

The groundwater flow rate across each facility was estimated with the equation:

$$V_s = k \times {}^{i}/_{n_e}$$

where:

V_s = the groundwater flow rate in feet per day (ft/day)
k = the hydraulic conductivity in ft/day, estimated from slug testing results from system wells
i = the hydraulic gradient in feet per feet (ft/ft), calculated based on groundwater elevations for the presented monitoring events
n_e = the effective porosity, a unitless parameter, estimated to be 0.25 for a silt/sand (Duffield 2007), reflective of site soils

Hydraulic conductivity (k) values measured on site ranged from 0.023 ft/day to 21.9 ft/day based on site-specific testing conducted in 2023 and analyzed in 2024 (WSP 2024b). As the Bottom Ash Landfill and Bottom Ash Impoundment are adjacent to one another and intersect similar geologic formations within the uppermost water-

bearing zone, the groundwater flow rates are assumed to be approximately the same for the facilities during each sampling event and are presented below.

- Q1 2025
  - Average gradient (i) = 0.007 ft/ft
  - Range of groundwater flow velocities (V_s): 0.0006 ft/day to 0.62 ft/day
- Q2 2025:
  - Average gradient (i) = 0.006 ft/ft
  - Range of groundwater flow velocities (V_s): 0.0006 ft/day to 0.56 ft/day
- Q4 2025:
  - Average gradient (i) = 0.007 ft/ft
  - Range of groundwater flow velocities (V_s): 0.0006 ft/day to 0.60 ft/day

3.2 Monitoring Data (Analytical Results)

Analytical results for samples collected in 2025 for monitoring wells within the networks are shown in Appendix B. Collected results for total metals are presented.

3.3 Comparative Statistical Analysis for Detection Monitoring Parameters

Comparative statistical analysis is conducted following each detection monitoring event. For both Shewhart-CUSUM (cumulative summation) limits and non-parametric prediction limit (NP-PL), the comparative statistical analysis consists of a comparison of detection monitoring results collected during the period of interest to the statistical limit calculated from the baseline data. At present, no parameters are currently analyzed using alternative comparative methods for trending datasets. However, if well-constituent pairs with increasing trends were identified during the baseline period, those well-constituent pairs would be evaluated with an alternative trend test, such as that described by the electric Power Research Institute (EPRI 2015) or a Sen's slope trend test, to determine compliance. For well-constituent pairs with decreasing trends during the baseline period, a Sen's slope test would be used to assess the compliance results. A full description of the steps taken for comparative statistical analysis is provided in the Coal Combustion Residuals Groundwater Statistical Method Certification (GAUSA 2021a), available on GRE's publicly accessible CCR website.

Comparative statistical analysis for detection monitoring events occurs within 90 days of receipt of the final analytical data. Based on the timing of the detection monitoring sampling event in Q4 2025 and the date of receipt of the final analytical data, comparative statistical analysis for the Q4 2025 event will be completed in Q1 2026.

For reporting purposes, non-detect results for compliance samples are shown at the primary quantitation limit (PQL) in the tables included as Appendix C.

3.3.1 Definitions

The following definitions will be used in discussion of the comparative statistical analysis for detection monitoring parameters:

- Elevated CUSUM: occurs when the calculated CUSUM value is greater than the Shewhart-CUSUM limit established by the baseline statistical analysis, but the analytical result does not exceed the Shewhart-CUSUM limit. An elevated CUSUM is an indication that concentrations are gradually increasing and that analytical results may exceed the Shewhart-CUSUM limit in the future. For elevated CUSUM values in the case of two-tailed analysis for field-measured pH, the calculated CUSUM value may also be below the lower Shewhart-CUSUM limit established by the baseline statistical analysis.
- Potential exceedance: an initial analytical result that exceeds the parametric prediction limit (PL), the Shewhart-CUSUM limit, or the NP-PL established by the baseline statistical analysis, or an initial elevated calculated CUSUM value that exceeds the Shewhart-CUSUM limit. Confirmatory resampling will determine if the potential exceedance is a false positive or a verified statistically significant increase (SSI). Non-detect results that exceed the statistical limit are not considered potential exceedances.
- False positive: an analytical result that exceeds the statistical limit that can clearly be attributed to laboratory error, changes in analytical precision, or is invalidated through confirmatory resampling. False positives are not used in calculation of any subsequent CUSUM values.
- Confirmatory re-sample: the next sample collected for statistical confirmation following identification of a potential exceedance.
- Verified SSI: two consecutive exceedances (the original sample and the confirmatory resample for analytical results, two consecutive elevated CUSUM values, or a combination of an analytical result above the statistical limit and an elevated CUSUM value in either event order) for the same constituent at the same well.

3.3.2 Q4 2024 Detection Monitoring Comparative Statistical Analysis

Results for the comparative statistical analysis for the Q4 2024 detection monitoring event are summarized as follows, with the results presented in Appendix C.

3.3.2.1 Background Water Quality Review

3.3.2.1.1 Potential Exceedances

The following potential exceedance was identified for the Q4 2024 detection monitoring samples:

- MW-7A (background, upgradient), total dissolved solids elevated CUSUM.

A confirmatory re-sample was collected in March 2025, with the result discussed below.

3.3.2.1.2 False Positives

No false positives were identified at the background wells during the Q4 2024 sampling event.

3.3.2.1.3 Verified SSIs

The following verified SSIs were reconfirmed during the comparative statistical analysis following the Q4 2024 sampling event:

- MW-6B (background, side-gradient), chloride (ongoing elevated CUSUM, initially verified Q3 2021)
- MW-7B (background, upgradient), chloride (ongoing elevated CUSUM, initially verified Q4 2020)

The following SSI at a background well was verified following confirmatory resampling for the Q4 2024 sampling event:

- MW-7A (background, upgradient), total dissolved solids elevated CUSUM

3.3.2.2 Downgradient Water Quality Review

The following items pertaining to the downgradient water quality were identified during the Q4 2024 sampling event.

3.3.2.2.1 Potential Exceedances

The following potential exceedances at the downgradient wells were identified for the Q4 2024 detection monitoring samples:

- MW-202 (downgradient, Bottom Ash Impoundment), boron elevated CUSUM
- MW-202 (downgradient, Bottom Ash Impoundment), sulfate elevated CUSUM

Confirmatory re-samples were collected in March 2025, with results discussed below.

3.3.2.2.2 False Positives

The following potential exceedances identified during the Q4 2024 sampling event at downgradient wells were determined to be false positives following collection of confirmatory re-samples:

- MW-202 (downgradient, Bottom Ash Impoundment), boron
- MW-202 (downgradient, Bottom Ash Impoundment), sulfate

3.3.2.2.3 Verified SSIs

The following verified SSIs at the downgradient wells were identified during the comparative statistical analysis following the Q4 2024 sampling event:

- MW-9N (downgradient, Bottom Ash Landfill), calcium (ongoing elevated CUSUM, initially verified Q4 2020)
- MW-9N (downgradient, Bottom Ash Landfill), chloride (ongoing, initially verified Q2 2019)
- MW-9N (downgradient, Bottom Ash Landfill), fluoride (ongoing, initially verified Q2 2021)
- MW-9N (downgradient, Bottom Ash Landfill), field-measured pH (ongoing elevated CUSUM, initially verified Q2 2023)
- MW-9N (downgradient, Bottom Ash Landfill), total dissolved solids (ongoing elevated CUSUM, initially verified Q2 2021)
- MW-102 (downgradient, Bottom Ash Landfill), field-measured pH (ongoing elevated CUSUM, initially verified Q2 2023)
- MW-103 (downgradient, Bottom Ash Landfill), boron (ongoing, initially verified Q2 2020)
- MW-103 (downgradient, Bottom Ash Landfill), calcium (ongoing elevated CUSUM, initially verified Q1 2023)
- MW-103 (downgradient, Bottom Ash Landfill), chloride (ongoing elevated CUSUM, initially verified Q2 2019)
- MW-103 (downgradient, Bottom Ash Landfill), fluoride (ongoing, initially verified Q2 2019)
- MW-103 (downgradient, Bottom Ash Landfill), field-measured pH (ongoing, initially verified Q4 2023)

- MW-103 (downgradient, Bottom Ash Landfill), sulfate (ongoing, initially verified Q1 2021)
- MW-103 (downgradient, Bottom Ash Landfill), total dissolved solids (ongoing, initially verified Q2 2020)
- MW-203 (downgradient, Bottom Ash Impoundment), boron (ongoing, initially verified following confirmatory resampling for the Q2 2023 event)
- MW-203 (downgradient, Bottom Ash Impoundment), sulfate (ongoing, initially verified following confirmatory resampling for the Q2 2023 event)
- MW-203 (downgradient, Bottom Ash Impoundment), total dissolved solids (ongoing, initially verified following confirmatory resampling for the Q2 2023 event)

3.3.3 Q2 2025 Detection Monitoring Comparative Statistical Analysis

Results for the comparative statistical analysis for the Q2 2025 detection monitoring event are summarized as follows, with the results presented in Appendix C.

3.3.3.1 Background Water Quality Review

The following items pertaining to the background (upgradient and side-gradient) water quality were identified during the Q2 2025 sampling event.

3.3.3.1.1 Potential Exceedances

The following potential exceedance was identified for the Q2 2025 detection monitoring samples:

- MW-7A (background, upgradient), field-measured pH elevated CUSUM

A confirmatory re-sample was collected in October 2025, with the result discussed below.

3.3.3.1.2 False Positives

The potential exceedance identified for field-measured pH during the Q2 2025 sampling event at MW-7A was determined to be a false positive following collection of a confirmatory re-sample.

3.3.3.1.3 Verified SSIs

The following verified SSIs were reconfirmed during the comparative statistical analysis following Q2 2025 sampling event:

- MW-7A (background, upgradient), total dissolved solids (ongoing elevated CUSUM, initially verified following confirmatory resampling for Q4 2024)

Chloride was not analyzed for the Q2 2025 samples (see discussion in Section 2.3.3). Therefore, the following previously identified SSIs for chloride are assumed to be reconfirmed:

- MW-6B (background, side-gradient), chloride (ongoing elevated CUSUM, initially verified Q3 2021)
- MW-7B (background, upgradient), chloride (ongoing elevated CUSUM, initially verified Q4 2020)

3.3.3.2 Downgradient Water Quality Review

The following items pertaining to the downgradient water quality were identified during the Q2 2025 sampling event.

3.3.3.2.1 Potential Exceedances

No potential exceedances were identified during the Q2 2025 sampling event for the downgradient wells.

3.3.3.2.2 False Positives

No false positives were identified following confirmatory resampling for the Q2 2025 sampling event for the downgradient wells.

3.3.3.2.3 Verified SSIs

The following verified SSIs at the downgradient wells were identified during the comparative statistical analysis following the Q2 2025 sampling event:

- MW-9N (downgradient, Bottom Ash Landfill), calcium (ongoing elevated CUSUM, initially verified Q4 2020)
- MW-9N (downgradient, Bottom Ash Landfill), fluoride (ongoing, initially verified Q2 2021)
- MW-9N (downgradient, Bottom Ash Landfill), field-measured pH (ongoing elevated CUSUM, initially verified Q2 2023)
- MW-9N (downgradient, Bottom Ash Landfill), total dissolved solids (ongoing elevated CUSUM, initially verified Q2 2021)
- MW-102 (downgradient, Bottom Ash Landfill), field-measured pH (ongoing elevated CUSUM, initially verified Q2 2023)
- MW-103 (downgradient, Bottom Ash Landfill), boron (ongoing, initially verified Q2 2020)
- MW-103 (downgradient, Bottom Ash Landfill), calcium (ongoing elevated CUSUM, initially verified Q1 2023)
- MW-103 (downgradient, Bottom Ash Landfill), fluoride (ongoing, initially verified Q2 2019)
- MW-103 (downgradient, Bottom Ash Landfill), field-measured pH (ongoing, initially verified Q4 2023)
- MW-103 (downgradient, Bottom Ash Landfill), sulfate (ongoing, initially verified Q1 2021)
- MW-103 (downgradient, Bottom Ash Landfill), total dissolved solids (ongoing, initially verified Q2 2020)
- MW-203 (downgradient, Bottom Ash Impoundment), boron (ongoing, initially verified following confirmatory resampling for the Q2 2023 event)
- MW-203 (downgradient, Bottom Ash Impoundment), sulfate (ongoing, initially verified following confirmatory resampling for the Q2 2023 event)
- MW-203 (downgradient, Bottom Ash Impoundment), total dissolved solids (ongoing, initially verified following confirmatory resampling for the Q2 2023 event)

Chloride was not analyzed for the Q2 2025 samples (see discussion in Section 2.3.3). Therefore, the following previously identified SSIs for chloride are assumed to be reconfirmed:

- MW-9N (downgradient, Bottom Ash Landfill), chloride (ongoing, initially verified Q2 2019)
- MW-103 (downgradient, Bottom Ash Landfill), chloride (ongoing elevated CUSUM, initially verified Q2 2019)

3.4 Groundwater Protection Standards

No changes are proposed for the site GWPS, based on the results collected from the background locations from 2022 through Q2 2025. Changes in the background water quality will continue to be monitored during each sampling event.

The current GWPS used at the site were originally presented in the 2022 annual CCR groundwater monitoring and corrective action report (WSP 2023a) and were developed using groundwater data collected between 2016 and 2021 from the background (both upgradient and side-gradient) monitoring wells. As additional data is collected from the background monitoring wells (MW-6B, MW-7A, MW-7B, MW-8B, and MW-105), the suitability of these GWPS is reviewed following each monitoring event.

During the Q1 2025 monitoring event, the result for cobalt at MW-7A (upgradient) was reported as a non-detect with dilution that exceeds the site GWPS value. The result is considered acceptable from a quality control perspective but will not be used for comparative purposes that would result in changes to the GWPS.

3.5 Comparative Statistical Analysis for Assessment Monitoring Parameters

3.5.1 Statistical Approach

To determine if detected assessment monitoring constituents have statistically exceeded the associated GWPS, a confidence interval approach was used for determining compliance. Per recommendations in the Unified Guidance (USEPA 2009) and detailed by EPRI (2015), a confidence interval statistically defines the upper and lower bound (the upper and lower confidence limit) of the true mean associated with a groundwater population. The Unified Guidance recommends confidence intervals for assessment monitoring. A confidence interval statistically defines the confidence range and the upper and lower bound of a true mean, median, or other statistical measure of a compliance monitoring dataset. Confidence intervals identify SSLs through comparison against a fixed standard, namely the GWPS for each parameter.

The specific type of confidence interval for each well-constituent pair is based on three factors:

1) The detection frequency of the compliance data

2) The distribution of the compliance data

3) The presence of statistically significant trends within the compliance data

Prior to constructing the confidence intervals for each monitoring event, an initial data review was conducted on the compliance data for determining the detection frequency and data distribution, as described in the Coal Combustion Residuals Groundwater Statistical Methods Certification (GAUSA 2021a). Additionally, compliance data was tested for trends using Sen's slope methodology prior to constructing confidence intervals.

A parametric confidence interval around the mean was used if the compliance dataset had less than 50% non-detects (ND) and was either normally distributed or transform-normally distributed. A confidence (α) of 95% was used for calculating the parametric upper confidence limit (UCL) and lower confidence limit (LCL) of the compliance data. Parametric confidence intervals (CI) were calculated using the following equation:

$$CI = \bar{x} \pm t_{(1-\alpha,n-1)} \frac{s}{\sqrt{n}}$$

Where:

$\bar{x}$ = the mean of the comparative sample population

s = the standard deviation of the comparative sample population

n = the number of samples in the comparative sample population

t = a value from a student's t-test derived from the desired level of confidence $(1-\alpha)$ and the degrees of freedom $(n-1)$

Summarized values for t are compiled in the Unified Guidance in Table 16-1, Appendix D (USEPA 2009).

A non-parametric confidence interval around the median was used for datasets that did not show normal or transform-normal distributions and for compliance populations with greater than 50% ND. For non-parametric confidence intervals, the UCL and LCL are generally chosen as order statistics of the sample data dependent on the sample size of the compliance dataset (n), the desired confidence level $(1-\alpha)$, and the median of the compliance dataset.

For the determination of SSLs, the LCL is of primary interest. A confidence interval is only considered statistically above the associated GWPS if both the UCL and LCL exceed the GWPS. If only the UCL exceeds the GWPS while the LCL remains below the GWPS, the results of the test are considered inconclusive. The Unified Guidance (USEPA 2009) recommends results of this category be interpreted as "in compliance" and not consider the result to represent an SSL. If both the UCL and CLC are below the GWPS, the data are considered not statistically significant.

Confidence intervals are only constructed on data that do not display statistically significant trends. If the compliance dataset was found to display a statistically significant trend, a confidence band would be constructed around the estimated trend line. Per the Unified Guidance, a confidence band is "essentially a continuous series of confidence intervals estimated along every point of the trend" (USEPA 2009). For determination of an SSL using a confidence band approach, both the upper and lower confidence band must exceed the GWPS to be considered an SSL. If only the upper confidence band exceeds the GWPS while the lower confidence band remains below the GWPS, the results of the test are considered inconclusive. If both the upper and lower confidence band are below the GWPS, the data are considered not statistically significant.

3.5.2 Bottom Ash Landfill Q4 2024, Q1 2025, and Q2 2025 Findings

Arsenic at MW-103 remains identified at an SSL above the GWPS based on the comparative statistical analysis following the Q4 2024, Q1 2025, and Q2 2025 assessment monitoring events for the Bottom Ash Landfill. The remainder of parameters at MW-103 have been determined to not be statistically significant during each monitoring event. No statistically significant items have been identified for MW-9N and MW-102.

Data collected at the Bottom Ash Landfill downgradient wells between the start of assessment monitoring and Q1 2024 did not display any statistically significant trends using the Sen's slope test.

A statistically significant decreasing trend was identified for lithium at MW-102 during the Q4 2024, Q1 2025, and Q2 2025 monitoring events. A confidence band around the trend line was developed for comparative purposes for this well-constituent pair during each listed monitoring event. Both the lower and upper confidence bands around the trend line are below the GWPS; therefore, the Q4 2024, Q1 2025, and Q2 2025 lithium data for MW-102 are not statistically significant.

For lithium at MW-9N, while a statistically significant decreasing trend was identified for the Q2 2024 monitoring event, the trend was not statistically significant with inclusion of the Q4 2024 point. Lithium at MW-9N was analyzed with a parametric confidence interval for the Q4 2024 event.

A statistically significant decreasing trend was identified for lithium at MW-9N during the Q1 2025 and Q2 2025 monitoring events. A confidence band around the trend line was developed for comparative purposes for this well-constituent pair during each listed monitoring event. Both the lower and upper confidence bands around the trend line are below the GWPS; therefore, the Q1 2025 and Q2 2025 lithium data for MW-9N are not statistically significant.

Results of the comparative statistical analysis for the downgradient wells at the Bottom Ash Landfill are shown in the tables of Appendix D.

Based on the timing of the assessment monitoring sampling event in Q4 2025 and the date of receipt of the final analytical data, comparative statistical analysis for the Q4 2025 event will be completed in Q1 2026 within 90 days of receipt of the final analytical data.

3.5.3 Bottom Ash Impoundment Q4 2024, Q1 2025, and Q2 2025 Findings

With inclusion of the Q4 2024 comparative results, the minimum number of assessment monitoring samples collected following the beginning of assessment monitoring were available for each of the downgradient network wells of the Bottom Ash Impoundment. Comparative statistical analysis was conducted using each of the quarterly samples collected in 2024.

Confidence intervals are only constructed on data that does not display statistically significant trends. With the four comparative points collected through Q4 2024 for the Bottom Ash Impoundment, no data set will result in a statistically significant trend based on the associated calculation for the Sen's Slope test.

No statistically significant items were identified for MW-202 or MW-203 based on the Q4 2024 comparative statistical analysis. Molybdenum was identified at an SSL above the site GWPS at MW-201. The remainder of parameters at MW-201 were determined not to be statistically significant.

Molybdenum remains identified at an SSL above the GWPS at MW-201 based on the Q1 2025 and Q2 2025 comparative statistical analysis., Arsenic was identified at an SSL above the GWPS at MW-203 beginning with the Q1 2025 comparative statistical analysis and continuing in Q2 2025. The remainder of parameters at MW-201 and MW-203 have been determined to not be statistically significant during either the Q1 2025 or Q2 2025 monitoring events. No statistically significant items have been identified for MW-202.

4.0 PROGRAM TRANSITIONS

4.1 Detection Monitoring

Detection monitoring samples are collected on at least a semi-annual basis for each program well. This monitoring began with the samples collected in Q4 2017. GRE plans to collect semi-annual samples for the detection monitoring program in Q2 2026 and Q4 2026. A transition to assessment monitoring does not preclude the continued collection of detection monitoring parameters on at least a semi-annual basis.

4.2 Assessment Monitoring

4.2.1 Assessment Monitoring Trigger

40 CFR 257.94(e) states the conditions under which a CCR unit must transition to assessment monitoring or complete an alternative source demonstration (ASD):

> "If the owner or operator of a CCR unit determines, pursuant to 40 CFR 257.93(h) that there is an SSI over background levels for one or more of the constituents listed in Appendix III to this part at any monitoring well at the waste boundary specified under 40 CFR 257.91(a)(2), the owner or operator must: (1) Except as provided for in paragraph (e)(2) of this section, within 90 days of detecting a SSI over background levels for any constituent, establish an assessment monitoring program meeting the requirements of 40 CFR 257.95. (2) The owner or operator may demonstrate that a source other than the CCR unit caused the statistically significant levels of a constituent or that the SSI resulted from error in sampling, analysis, statistical evaluation, or natural variation in groundwater quality." (USEPA 2015a)

NDAC 33.1-20-08-6(4)(3) describes similar conditions for transitioning to assessment monitoring or completing an ASD with the additional requirement of NDDEQ review and approval for ASDs and the determination for remaining in detection monitoring.

4.2.1.1 Alternative Source Demonstrations

No new ASDs were developed in 2025. ASDs have not been pursued for either newly verified or ongoing detection monitoring parameter verified SSIs at the Bottom Ash Landfill downgradient wells since the beginning of assessment monitoring in Q1 2021 or from the Bottom Ash Impoundment downgradient wells since the beginning of assessment monitoring in Q1 2024.

ASDs are not planned for the verified SSIs for chloride at background wells MW-6B and MW-7B, as the CCR units have been determined to not be the cause of the verified SSIs based on groundwater flow and direction. Per the Coal Combustion Groundwater Statistical Method Certification (GAUSA 2021a), an ASD will only be completed for verified SSIs identified in downgradient wells.

4.2.2 Assessment Monitoring Program

Assessment monitoring was initiated for the Bottom Ash Landfill in Q1 2021 consistent with 40 CFR 257.95 and NDAC 33.1-20-08-06(5). Assessment monitoring samples have been collected at the background locations and the Bottom Ash Landfill downgradient wells since Q1 2021 to meet the assessment monitoring sampling frequency requirements detailed in 40 CFR 257.95(b) and (d) and NDAC 33.1-20-08-06(5)(b) and (d).

The Federal and State CCR rules require that the concentrations of assessment monitoring constituents detected in downgradient wells during assessment monitoring be statistically compared to site-specific GWPS. If an SSL above the GWPS is identified at one or more downgradient wells, both the Federal and State CCR rules require additional groundwater characterization and an Assessment of Corrective Measures, unless the SSL can be attributed to a source other than the CCR unit, an error in sampling, an error in statistical analysis, or natural variation in groundwater quality.

Arsenic was identified at an SSL above the GWPS for Bottom Ash Landfill monitoring well MW-103 following the Q4 2021 assessment monitoring sampling. GRE pursued an ASD following identification of the SSL for arsenic at MW-103, which was included in the 2022 annual report (WSP 2023a). The ASD evaluation determined that insufficient evidence was available to make conclusive statements about an alternative source for arsenic at MW-

103. Discussion of the corrective measures assessment for the Bottom Ash Landfill is included in subsequent sections.

Assessment monitoring was initiated for the Bottom Ash Impoundment in Q1 2024 consistent with 40 CFR 257.95 and NDAC 33.1-20-08-06(5) following identification of detection monitoring SSIs at Bottom Ash Impoundment well MW-203 in 2023 (WSP 2024a). Assessment monitoring samples were collected from the Bottom Ash Impoundment downgradient wells since Q1 2025 to meet the assessment monitoring sampling frequency requirements detailed in 40 CFR 257.95(b) and (d) and NDAC 33.1-20-08-06(5)(b) and (d).

Molybdenum was identified at an SSL above the GWPS for Bottom Ash Impoundment monitoring well MW-201 following the Q4 2024 assessment monitoring sampling. Further, arsenic was identified at an SSL above the GWPS for Bottom Ash Impoundment monitoring well MW-203 following the Q1 2025 assessment monitoring sampling. An Assessment of Corrective Measures was pursued for the Bottom Ash Impoundment, with discussion included in subsequent sections.

4.3 Evaluation of Corrective Measures – Bottom Ash Landfill

Pursuant to 40 CFR 257.97 and NDAC 33.1-20-08-06(6), WSP, on behalf of GRE, is further evaluating the potential corrective measures identified in the Bottom Ash Landfill ACM Report (GAUSA 2022), to identify a remedy or combination of remedies as soon as feasible. In 2025, significant progress was made on the evaluation of corrective measures in response to the SSL for arsenic downgradient of the Bottom Ash Landfill. This includes completion of monitored natural attenuation (MNA) evaluation, geochemical modeling, and progress evaluating geochemical injection.

Progress related to the selection and design of a remedy is reported semi-annually. Each of the prior reports is available via GRE's publicly accessible CCR website.

- The 2022 annual report (WSP 2023a) includes progress between the completion of the ACM in November 2022 and January 2023.
- A semi-annual progress report was prepared for selecting and designing a remedy in 2023 (WSP 2023b), covering activities conducted between January 2023 and July 2023.
- The 2023 annual report (WSP 2024a) covered activities related to remedy selection conducted between August 2023 and January 2024.
- In 2024, a semi-annual progress report was completed covering the activities conducted between February 2024 and July 2024 (WSP 2024d).
- The 2024 annual report (WSP 2025a) covered activities related to remedy selection conducted between August 2023 and January 2025.
- In 2025, a semi-annual progress report was completed covering the activities conducted between February 2025 and July 2025 (WSP 2025c).

As outlined in the following sections, a significant number of actions have occurred to reduce the potential source of the SSL, document the extent of the plume, and evaluate measures to reduce concentrations to below groundwater protection standards.

4.3.1 Assessment of Corrective Measures

Following identification of the SSL for arsenic at MW-103 and the inconclusive ASD evaluation, GRE initiated an assessment of corrective measures (ACM) for the Bottom Ash Landfill in June 2022 consistent with the requirements of 40 CFR 257.96 and NDAC 33.1-20-08-06(6). An extension was requested in September 2022 prior to completion of the ACM, consistent with 40 CFR 257.96(a) and NDAC 33.1-20-08-06(6)(a),. The extension request was approved by the NDDEQ (NDDEQ 2022), and a copy of the extension approval was included in the 2022 annual report (WSP 2023a). The ACM was completed and submitted to the NDDEQ for approval on November 21, 2022. The ACM was included as an attachment in the 2022 annual report (WSP 2023a). The NDDEQ approved the ACM on February 21, 2023 (NDDEQ 2023b).

The purpose of the ACM was to identify potential corrective measures to prevent further releases and to remediate any identified releases to groundwater at the Bottom Ash Landfill. In particular, the ACM evaluated source control corrective measures, and corrective measure alternatives for groundwater corrective action at the site given the specific site conditions and constituent(s) of concern.

4.3.1.1 Source Control Corrective Measures

The previously completed closure in place of the Bottom Ash Landfill and installation of the final cover system reduces the potential for migration of CCR constituents to groundwater. Prior to the initiation of assessment monitoring and the ACM, the Bottom Ash Landfill was closed with an engineered final cover placed over CCR left in place. Closure in place was completed in accordance with the closure plan (GAI 2019c) and was documented in the Construction Quality Assurance (CQA) Report provided to the NDDEQ (GAUSA 2021b). The cover system was designed to minimize infiltration and erosion and to meet or exceed the requirements of 40 CFR 257.102(d)(3) and NDAC 33.1-20-08-07(3)(d)(3). Due to the reduced infiltration through the final cover and the lack of contact between CCR and groundwater, the closure of the Bottom Ash Landfill is anticipated to perform effectively as a source control.

4.3.1.2 Groundwater Remediation Corrective Measures

In addition to the closure and final cover source control corrective measures, the following groundwater remediation corrective measures were identified in the ACM as potentially feasible and effective for use at the Bottom Ash Landfill:

- Monitored Natural Attenuation (MNA) and Enhanced Monitored Natural Attenuation (Enhanced MNA)
- Hydraulic Containment (Groundwater Pump and Treat)
- Geochemical Approaches (In Situ Injection)
- Permeable Reactive Barriers
- Phytoremediation

As outlined below, certain options are no longer being evaluated for a number of reasons. At present, the following groundwater remediation corrective measures are still being evaluated for implementation at the Bottom Ash Landfill:

- MNA and Enhanced MNA)
- Geochemical Approaches (In Situ Injection)

MNA and in situ injection are continuing to be evaluated based on the findings from the Tier I MNA report (WSP 2023c) and the Tier II and III MNA report (WSP 2024c). The findings from these efforts indicate that MNA is occurring and effective at the site, and preliminary findings that in situ injection may be able to further attenuate arsenic and reduce the time to attain the GWPS.

The other options originally identified in the ACM report are not currently being evaluated for several reasons. Phytoremediation is not currently being evaluated as a corrective measure for the site due to the groundwater depth in the area of concern being deeper than can typically be affected by phytoremediation. Depending on plant type, many root systems for plants used in traditional phytoremediation approaches focus on the upper 1 to 2 feet from the ground surface (ITRC 2009), while groundwater downgradient of the Bottom Ash Landfill is approximately 20 feet below the ground surface.

Permeable reactive barriers are not currently being evaluated due to the depth between bedrock versus the uppermost encountered groundwater. Critically, for a permeable reactive barrier to be effective, the barrier should ideally “extend to and be keyed into a competent bedrock layer or aquitard” to prevent circumvention of groundwater around/under the installed barrier (ITRC 2011). Downgradient of the Bottom Ash Landfill, materials have been mixed through both natural deposition and alteration to the conditions through closure and removal of the industrial site, making identification of a continuous material suitable for keying a barrier difficult.

Hydraulic containment (groundwater pump and treat) is not currently being evaluated as a stand-alone remedy. Pump and treat extraction technologies tend to be more efficient for constituents that are not readily attenuated by mechanisms such as adsorption. Additional chemical testing, similar to that for in situ injection, is necessary to determine the extraction potential for arsenic with different treatment technologies and can be executed concurrently with testing for other alternatives.

If the currently pursued corrective measures prove not to be adequate, these or other potential corrective measures may be considered in the future.

4.3.2 Summary of Work Completed – August 2025 to January 2026

The following subsections summarize field activities, desktop analyses, and supplemental data collected between August 2025 and January 2026, following completion of the most recent semi-annual report (WSP 2025c). This work further delineates the nature and extent of the SSL and continues the evaluation of the potential groundwater remediation corrective measures presented in the ACM Report (GAUSA 2022) and subsequent reporting.

The collected data continue to be used to evaluate the feasibility, mechanisms, rates, and stability of identified potential corrective measure alternatives to address the SSL for arsenic in groundwater downgradient of the Bottom Ash Landfill. Evaluations of the data as they relate to remedy selection alternatives are ongoing and will be presented in future report(s).

4.3.2.1 Groundwater Monitoring Activities

As discussed in Section 3.1, samples were collected for the assessment monitoring program from the Bottom Ash Landfill network wells during three monitoring events in 2025. Samples have also been collected and analyzed from additional wells installed for the nature and extent investigation during the three monitoring events in 2025.

4.3.2.2 Efforts to Address Well Turbidity and Plume Delineation

As discussed in prior reporting (WSP 2024d, WSP 2025a, WSP 2025c), high turbidity in several of the nature and extent wells downgradient of the Bottom Ash Landfill has made plume delineation challenging. To aid in plume delineation, both dissolved and total analysis was conducted for a subset of parameters throughout 2025. Total analysis captures both the dissolved aqueous concentrations present in samples, as well as the insoluble particulate concentrations. Dissolved concentrations are determined by filtering samples prior to analysis, to remove insoluble particulates greater than 0.45 microns in diameter. During the 2025 sampling events, the parameters that were tested with both dissolved and total analysis included the Appendix IV metals, and aluminum, iron, and manganese (primary components of most soils).

Comparison of dissolved results to total results for aluminum, iron, and manganese, when made in the context of samples with high turbidity, can help to determine if the associated total results are representative of site groundwater, or the results indicate the presence of excessive artificially mobilized particles (i.e., site soil particles that have entered the water column as a result of the sampling methods). Analysis of the aluminum, iron, and manganese total and dissolved data for samples with excess turbidity over the course of 2025 suggest that total results that have occurred concurrently with high turbidity measurements reflect artificially suspended soil particles and are not representative samples of the groundwater, based on the reported concentrations and the magnitude of the difference between total and dissolved concentrations.

Review of the total and dissolved arsenic concentrations continue to suggest that the total concentrations from the Q2 2025 and Q4 2025 monitoring events may not be representative of the site groundwater based on the presence of excess turbidity at specific wells. Appendix E includes figures presenting the total arsenic concentrations measured during the Q2 2025 and Q4 2025 events, along with corresponding figures presenting the dissolved arsenic concentrations measured during the same events. In each of the figures, locations that are color-coded orange or red had concentrations that are greater than the GWPS (0.01 mg/L). Color-coding of the figures has been used as part of the plume delineation effort to bound the highest site concentrations associated with the Bottom Ash Landfill.

As detailed in past reporting (WSP 2025a), locations with consistently low turbidity have continued to have total and dissolved arsenic concentrations that are similar in magnitude to one another. Locations with consistent low turbidity have included MW-103 as the well of interest for the Bottom Ash Landfill, MW-9N and MW-102 as the other Bottom Ash Landfill dedicated downgradient network monitoring wells, and the background locations. While naturally suspended particles are likely present in the total analysis, the comparison of the total and dissolved concentrations from event to event suggest that the results of the total analysis are consistently representative of the groundwater within each of these monitoring wells.

For other wells installed to determine the nature and extent of the arsenic plume, measured turbidity and the associated total and dissolved arsenic concentrations have varied significantly from event to event. Efforts were undertaken in 2025 to address identified turbidity issues at a subset of monitoring wells as discussed in the semi-annual report (WSP 2025c). However, in reviewing data collected in Q2 2025 and Q4 2025, similar issues are identified at wells MW-215 (during the Q4 2025 event) and MW-217 (during the Q2 2025 event). Based on the identified differences, at present, the extent of the delineated plume will continue to be reviewed in context of the comparison between the total and dissolved analysis until remaining turbidity issues are resolved.

4.3.2.3 Further Evaluation of Geochemical Injection

A second round of bench scale testing (following the first round discussed in the 2024 annual report, WSP 2025a) was conducted to evaluate the effectiveness of four reactants on reducing arsenic in soil and groundwater collected from wells MW-103 and MW-211. The tested reactants included:

- Sodium bicarbonate
- Iron sulfate (ferrous sulfate heptahydrate)
- Iron sulfate (ferrous sulfate heptahydrate) with sodium bicarbonate
- Iron sulfide (ferrous sulfide)

Results and analysis are included as Appendix F. Each of the tested reactants were found to reduce arsenic concentrations from the groundwater for both MW-103 and MW-211 to below the GWPS. However, testing indicated that other metals of interest (in particular, cobalt) may leach from the reactants at concentrations greater than the associated GWPS values. Identifying alternatives for chemical injection that reduce arsenic below the GWPS while minimizing the release of other constituents requires additional research.

4.3.2.4 Meeting with NDDEQ

On October 2, Great River Energy and WSP met with the NDDEQ to discuss progress to date on the remedy selection process for the Bottom Ash Landfill. The potential remedies and activities that have been conducted in support of remedy selection were discussed, as well as guidance for the required public meeting.

4.3.3 Summary of Remedy Selection Process Activities

4.3.3.1 Work Completed to Date

The following steps have been taken to delineate the plume and progress towards final remedy selection since the identification of an SSL for arsenic at MW-103:

- Completion of the Assessment of Corrective Measures report in 2022.
- Installation, development, and sampling of 15 nature and extent wells and 2 property boundary wells in 2022 and 2023.
- Geochemical and geotechnical testing of aquifer solids collected during drilling in 2022 and 2023.
- In situ hydraulic conductivity testing and analysis in 2023 and 2024.
- Installation of dedicated low-flow pumps in the new wells in 2024.
- Geochemical modeling and evaluation of MNA per the EPA's guidance including Tiers I, II, and III in 2023 and 2024.
- Additional geochemical modeling to supplement chemical injection testing based on site hydrogeological conditions.
- Groundwater sampling and analysis for bench-scale chemical injection testing.
- Initial characterization and bench-scale testing of the effects of chemical injection additives to site groundwaters.

- Groundwater sampling and analysis from the Bottom Ash Landfill network wells and nature and extent wells to further understand the extent and magnitude of arsenic above the GWPS downgradient of the Bottom Ash Landfill.
- Development of a Leapfrog geologic model to better visualize site hydrogeological information in support of the site conceptual model.
- Soil and groundwater sampling for the second phase of laboratory analysis to evaluate the suitability of chemical injection at the site.
- Initial characterization and bench-scale testing of the effects of chemical injection additives to site groundwaters and soils as part of the second phase of chemical injection analysis.
- Meeting with the NDDEQ to discuss remedy selection activities.

Figure 4 presents a simplified Gantt chart of the work conducted to date and planned activities over the next 6 months (until the next semi-annual report), with the intent of holding the public meeting and selecting a remedy as soon as feasible.

4.3.3.2 Remedy Selection

At present, selection of a final remedy is expected to be based on the following information:

- Plume Delineation
  - The arsenic plume downgradient of the Bottom Ash Landfill appears to be small (based on dissolved arsenic, the plume is less than 400 feet wide and not extending downgradient beyond the CCR unit boundary by more than 100 feet).
  - However, due to issues with turbidity at certain nature and extent wells, delineation of the plume has not been finalized.
- GWPS Attainment
  - Downgradient of the Bottom Ash Landfill, MNA is expected to reduce arsenic sufficiently to attain the GWPS. Expansion of the plume and re-mobilization of arsenic are not expected based on modeling, aquifer solids testing, and monitoring data collected to date. This is supported by the conclusions of the MNA Tier I, II, and III reports (WSP 2023c; WSP 2024c) developed in alignment with the USEPA guidance for MNA (USEPA 2015b).
  - The modeled amount of time needed to attain the GWPS at MW-103 at the unit boundary of the Bottom Ash Landfill is significant (WSP 2024c). Conditions not reflected in the modeling may decrease the time to attain the GWPS.
  - Initial modeling suggests chemical injection with iron will speed up attainment of the GWPS at MW-103.
  - Initial bench-scale testing for chemical injection with groundwater indicates that chemical injection with iron will reduce arsenic levels to below the GWPS.
  - Additional modeling was completed in 2025 using the results of bench scale testing and updated groundwater sampling data (WSP 2025c). These updates to the modeling confirmed previous model

results and further support the applicability of chemical injections as a viable remedy in the area of MW-103 for arsenic.

- A second round of bench-scale testing for chemical injection with groundwater and aquifer soils further indicated that chemical injection with iron will reduce arsenic levels to below the GWPS but could result in mobilization of other assessment monitoring constituents from the chemical additives. Additional research is needed to identify alternative materials for chemical injection to meet both objectives.

4.3.4 Planned Activities

On behalf of GRE, WSP is implementing activities to support the corrective action remedy selection process. Selection and implementation of corrective measures can be iterative, and GRE and WSP will continue data collection efforts, as necessary, to further refine the site conceptual model and evaluate the feasibility of remedies identified in the ACM Report (GAUSA 2022) in order to select a final remedy.

Supplementary data collection and evaluation activities proposed to be completed in the next 6 months include:

- Arsenic Delineation
  - Continue to evaluate wells with high turbidity and significant differences between total and dissolved arsenic concentrations following redevelopment efforts conducted in Q2 2025. Determine whether well redevelopment has improved sample quality or if abandonment and replacement of the associated wells is necessary.
- Groundwater Monitoring
  - Collect Q1 2026 annual assessment monitoring samples and Q2 2026 semi-annual detection monitoring and assessment monitoring samples.
- Public Meeting
  - In conformance with the requirements of 40 CFR 257.96(e) and NDAC 33.1-20-08-06(6)(e), Great River Energy will hold a public meeting to discuss the results of the corrective measures assessment with interested parties. The public meeting will be held on Thursday, February 5, 2026.
- Complete and Submit Remedy Selection Report to the NDDEQ
  - Pending public comments received during and after the public meeting and NDDEQ feedback, a remedy selection report will be completed and submitted to the NDDEQ for review and approval.

On behalf of GRE, WSP will continue to prepare semi-annual progress reports to document the progress in selecting and designing a groundwater remedy in accordance with 40 CFR 257.97 and -98 and NDAC 33.1-20-08-06(6) and (7) until a final remedy is selected. The next semi-annual report will be submitted July 31, 2026, if a final remedy has not been selected. On behalf of GRE, WSP will continue to include future semi-annual progress reports with the routine groundwater monitoring and corrective action reports to meet the requirements of 40 CFR 257.105(h)(12), 40 CFR 257.106(h)(9), and 40 CFR 257.107(h)(9) and NDAC 33.1-20-08-08(1)(h)(12), 33.1-20-08-08(2), and 33.1-20-08-08(3).

Upon selection of a remedy, a final report will be prepared describing the selected remedy and how the remedy meets the standards in 40 CFR 257.97 and -98 and NDAC 33.1-208-08-06(6) and (7). The final remedy selection report must be certified by a qualified professional engineer licensed in the state of North Dakota per 40 CFR

257.97(a) and approved by the NDDEQ per NDAC 331.20-08-06(7)(a). Once the remedy has been selected and approved by the NDDEQ, the implementation of the remedy will be initiated in accordance with 40 CFR 257.98 and NDAC 33.1-20-08-06(8).

4.4 Evaluation of Corrective Measures – Bottom Ash Impoundment

Pursuant to 40 CFR 257.97 and NDAC 33.1-20-08-06(6), WSP, on behalf of GRE, is further evaluating the potential corrective measures identified in the Bottom Ash Impoundment ACM Report (WSP 2025d), to identify a remedy or combination of remedies as soon as feasible.

Progress related to the selection and design of a remedy is reported semi-annually. This document (the current annual report for 2025) presents progress related to the selection and design of a remedy for the Bottom Ash Impoundment conducted between September 2025 and January 2026.

4.4.1 Assessment of Corrective Measures

GRE initiated an ACM for the Bottom Ash Impoundment on June 26, 2025, within 90 days of identifying the SSL for molybdenum at MW-201, consistent with the requirements of 40 CFR 257.96 and NDAC 33.1-20-08-06(6).

The SSL for arsenic at MW-203 was identified July 22, 2025, following completion of assessment monitoring statistics associated with the Q1 2025 annual sampling event and the initiation of the ACM at the Bottom Ash Impoundment. The ACM for the arsenic SSL at MW-203 was initiated July 22, 2025, by incorporation into the ongoing ACM for the Bottom Ash Impoundment, within 90 days of identification of the SSL.

The ACM was completed and submitted to the NDDEQ for approval on September 24, 2025. The ACM is included as an appendix to this annual report (Appendix G).

The purpose of the ACM is to identify potential corrective measures to prevent further releases and to remediate any identified releases to groundwater at the Bottom Ash Impoundment. The Bottom Ash Impoundment ACM evaluated source control corrective measures and corrective measure alternatives for groundwater corrective action at the site given the specific site conditions and constituent(s) of concern.

4.4.1.1 Source Control Corrective Measures

The previously completed closure in place of the Bottom Ash Impoundment and installation of the final cover system provides a source control measure that reduces the potential for migration of CCR constituents to groundwater. The Bottom Ash Impoundment was closed with an engineered final cover placed over CCR left in place prior to the initiation of assessment monitoring and the ACM. Closure in place was completed in accordance with the closure plan (GAI 2019b). The cover system was designed to minimize infiltration and erosion and to meet or exceed the requirements of 40 CFR 257.102(d)(3) and NDAC 33.1-20-08-07(3)(d)(3). Due to the reduced infiltration through the final cover and the lack of contact between CCR and groundwater, the closure of the Bottom Ash Impoundment is anticipated to perform effectively as a source control.

Following closure of the Bottom Ash Impoundment, an updated post-closure plan was prepared for the site in 2022 (GAUSA 2022). Maintenance will be provided on the final cover system for the required post-closure care period so that the integrity and effectiveness of the final cover system is maintained. Maintenance activities will include, as needed, repairs to the final cover to correct any effects related to settlement, subsidence, erosion, or other events, and will be performed to prevent run-on or run-off from eroding or otherwise damaging the final cover.

The bottom ash within the Bottom Ash Impoundment south cell was originally hydraulically sluiced into the cell, and precipitation falling on the footprint during operation and closure construction accumulated within the bottom ash. During closure construction, free water was pumped from the south cell and additional waste material from the closure of the north and center cells was added to achieve final waste grades. In addition to removal of free water within the south cell, the constructed sump was pumped during closure construction to remove any leachate that accumulated during closure. Construction of the engineered composite cover significantly reduced the infiltration of precipitation into the waste, but residual water remains within the bottom ash.

The removal of leachate will reduce leakage through potential defects in the composite liner by reducing the driving head. To remove this residual water, leachate accumulating in the sump has been regularly pumped out and disposed offsite. Up until early 2025, this was accomplished with a vacuum truck pumping the sump dry as often as every few days. In 2025, GRE installed a dedicated pump and holding tank along with power and other controls. This new system pumps leachate from the sump as the leachate accumulates, maintaining the depth of leachate in the sump between approximately 1 and 1.5 feet. This system is planned to operate through the post-closure period until leachate recharge drops below the level that the installed pumps can operate or until the recharge rate is low enough that an alternative leachate management method becomes preferable.

4.4.1.2 Groundwater Remediation Corrective Measures

In addition to the closure and final cover source control corrective measures, the following groundwater remediation corrective measures were identified in the ACM as potentially feasible for use at the Bottom Ash Impoundment:

- Monitored Natural Attenuation (MNA) and Enhanced Monitored Natural Attenuation (Enhanced MNA)
- Hydraulic Containment (Groundwater Pump and Treat)
- Geochemical Approaches (In Situ Injection)
- Permeable Reactive Barriers
- Phytoremediation

As described above in Section 4.3.1.2 for the Bottom Ash Landfill, certain options are no longer being evaluated at Stanton Station for a number of reasons. At present, the following groundwater remediation corrective measures are still being evaluated for implementation at the Bottom Ash Impoundment:

- MNA and Enhanced MNA
- Geochemical Approaches (In Situ Injection)

4.4.2 Summary of Work Completed – September 2025 to January 2026

The following subsections summarize field activities, desktop analyses, and supplemental data collected between September 2025 and January 2026, following completion of the ACM for the Bottom Ash Impoundment (WSP 2025d). This work further delineates the nature and extent of the SSL and continues the evaluation of the potential groundwater remediation corrective measures presented in the ACM Report (WSP 2025d).

The collected data continue to be used to evaluate the feasibility, mechanisms, rates, and stability of identified potential corrective measure alternatives to address the SSLs for arsenic and molybdenum in groundwater

downgradient of the Bottom Ash Impoundment. Evaluations of the data as they relate to remedy selection alternatives are ongoing and will be presented in future report(s).

4.4.2.1 Groundwater Monitoring Activities

As discussed in Section 3.1, samples were collected for the assessment monitoring program from the Bottom Ash Impoundment network wells during three monitoring events in 2025. Samples have also been collected and analyzed from additional wells installed for the nature and extent investigation during two monitoring events in 2025.

4.4.2.2 Installation of Dedicated Pumps

Dedicated low-flow pumps were installed at the Bottom Ash Impoundment nature and extent wells in September 2025 prior to the initial sampling event.

4.4.2.3 Solids Analysis

Solids samples were collected at the installed well locations during drilling in June 2025 and sent for analysis by SGS Canada Inc., as discussed in the Bottom Ash Impoundment ACM (WSP 2025d). Samples were analyzed using the sequential extraction procedure (SEP; Tessier et al. 1979) and X-ray diffraction (XRD) including clay speciation. Results of the SEP and XRD analysis are included in Appendix H and will be used in support of remedy selection.

4.4.2.4 Site Conceptual Model Update

The site hydrogeological model was updated to incorporate the newly collected information from the installation of the nature and extent wells. Seequent Limited's Leapfrog Geosoftware has been used to compile and analyze site monitoring well and borehole information collected across the site. The intention of the updated hydrogeological model is to provide a three-dimensional visualization of the available site information within a format that will allow further updates with time.

4.4.3 Summary of Remedy Selection Process Activities

4.4.3.1 Work Completed to Date

The following steps have been taken to delineate the plumes and progress towards final remedy selection since the identification of SSLs for molybdenum at MW-201 and arsenic at MW-203:

- Completion of the Assessment of Corrective Measures report in 2025.
- Installation, development, and sampling of 4 nature and extent wells surrounding MW-201, 3 nature and extent wells surrounding MW-203, and an additional property boundary well in 2025.
- Geochemical testing of aquifer solids collected during drilling in 2025.
- Installation of dedicated low-flow pumps in the new wells in 2025.
- Groundwater sampling and analysis from the Bottom Ash Landfill network wells and nature and extent wells to further understand the extent and magnitude of arsenic above the GWPS downgradient of the Bottom Ash Landfill.

Figure 5 presents a simplified Gantt chart of the work conducted to date and planned activities over the next 6 months (until the next semi-annual report). GRE intends to hold the public meeting and select a remedy as soon as feasible.

4.4.4 Planned Activities

GRE and WSP will continue data collection efforts, as necessary, to further refine the site conceptual model and evaluate the feasibility of remedies identified in the ACM Report (WSP 2025d) in order to select a final remedy.

Supplementary data collection and evaluation activities proposed to be completed in the next 6 months include:

- Plume Delineation
  - Ongoing analysis for determination of the extent of the plumes near MW-201 and MW-203 will continue. Analysis will include creation of preliminary plume maps based on results collected in Q4 2025 and results to be collected in Q1 2026.
  - Review of the results from ongoing monitoring will be used to determine the need for additional nature and extent wells. If necessary, plans will be made for installation of additional locations.
- Additional Soil Analysis
  - Samples collected during the drilling investigation in 2025 are undergoing additional mineralogical analysis of the clay portion by SGS Canada Inc. Results of the additional analysis will be included in future reporting.
- Tier I MNA
  - Following receipt of the aquifer solids analysis discussed above, a Tier I MNA evaluation will be completed.

On behalf of GRE, WSP will continue to prepare semi-annual progress reports to document the progress in selecting and designing a groundwater remedy in accordance with 40 CFR 257.97 and -98 and NDAC 33.1-20-08-06(6) and (7) until a final remedy is selected. Prior to the final selection of a corrective measure, a public meeting will be scheduled a minimum of 30 days before the selection of the remedy to present the results of the corrective measures assessment. The next semi-annual report will be submitted July 31, 2026. On behalf of GRE, WSP will continue to include future semi-annual progress reports with the routine groundwater monitoring and corrective action reports to meet the requirements of 40 CFR 257.105(h)(12), 40 CFR 257.106(h)(9), and 40 CFR 257.107(h)(9) and NDAC 33.1-20-08-08(1)(h)(12), 33.1-20-08-08(2), and 33.1-20-08-08(3).

Upon selection of a remedy, a final report will be prepared describing the selected remedy and how the remedy meets the standards in 40 CFR 257.97 and -98 and NDAC 33.1-208-08-06(6) and (7). The final remedy selection report must be certified by a qualified professional engineer licensed in the state of North Dakota per 40 CFR 257.97(a) and approved by the NDDEQ per NDAC 331.20-08-06(7)(a). Once the remedy has been selected and approved by the NDDEQ, the implementation of the remedy will be initiated in accordance with 40 CFR 257.98 and NDAC 33.1-20-08-06(8).

5.0 CLOSING

This report presents the analytical results for the 2025 monitoring events for the CCR groundwater monitoring programs at Great River Energy's Stanton Station, progress on the evaluation of corrective measures to address the arsenic SSL at MW-103 downgradient of the Bottom Ash Landfill, and progress on the evaluation of corrective measures to address the molybdenum SSL at MW-201 and the arsenic SSL at MW-203 downgradient of the Bottom Ash Impoundment. Comparative statistics for samples collected between Q4 2024 and Q2 2025 at both the Bottom Ash Impoundment and Bottom Ash Landfill are included in the report. Comparative statistics for the Q4 2025 monitoring events conducted in November 2025 will occur within 90 days of final receipt of the data, in Q1 2026.

The Bottom Ash Landfill remains in assessment monitoring under a corrective measures program at the close of 2025. Significant progress on the evaluation of corrective measures was made in 2025. This includes the completion of the evaluation of MNA, improved delineation of the plume, and bench testing of the effectiveness of geochemical injection. Remedy selection for the chosen corrective measures is ongoing, with a public meeting scheduled for February 2026.

The Bottom Ash Impoundment entered 2025 under an assessment monitoring program. An assessment of corrective measures for the Bottom Ash Impoundment was completed in 2025. At the end of 2025, the Bottom Ash Impoundment remains in assessment monitoring under a corrective measures program.

The next semi-annual report detailing the remedy selection process will be completed by July 31, 2026.

a. TOC (top of casing) and ground surface elevations surveyed by Interstate Engineering, Inc. in September 2020, October 2022, April 2023, and July 2025.

Notes:

Well construction measurements are from the original bore log, well data sheet, or well construction form.

Well construction information for MW-9N and MW-1R shown in italics are estimates based on the original well logs, accounting for the casing reductions completed in June 2020.

ft AMSL: feet above mean sea level; ft bgs = feet below ground surface; GW = groundwater

Metal concentrations represent the total fraction (i.e., samples have not been filtered).

Laboratory Provided Qualifiers:
U (Radiochem) = Not detected above the minimum detectable concentration (varies by sample).
* = Recovery of internal standard out of acceptance limits; sample required dilution. Reporting limit has been elevated to account for this dilution,

Workorder Comments

All analytes with dilution factors greater than 1 (displayed in DF column) required dilution due to matrix or high concentration of target analyte unless otherwise noted and reporting limits (RDL column) have been adjusted accordingly.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. *All samples requiring analyses performed outside of the Bismarck laboratory (New Ulm and Sub-Contract) are not documented on this form.
*All samples requiring microbiological tests are not documented on this form.

Form #80-910025-2 M:\Documents\FORMS\Approved Templates\Bismarck\Waters\80-910025-2 Sample Condition Checklist Page 1 of 1 Effective Date : 1 July 2024

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Notes:
Suggested locations for collection of QA/QC samples in 2025 are listed in Table 2.
App III - Appendix III Detection Monitoring List, Table 5
App IV - Appendix IV Assessment Monitoring List, Table 6
Additional List - Table 7
Required field parameters are listed in Table 5 and Table 6
1. The piezometers do not have dedicated pumps and will need to be sampled by other methods.
2. The sump should be sampled using surface water collection methods via the sump riser.
3. Surface water samples to be collected only if safely accessible and free water is present.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. Total # of Sample Locations		2	40	53	15	53
Total # of QC Samples		0	9	11	4	11

Notes:
Locations to collect samples are **suggestions only** to help with the distribution of QA/QC samples across the site and between facilities while meeting QA/QC objectives for the sampling programs.
Notes for QA/QC
Duplicates = 10-15% of primary collected sample
Field Blanks = approximately 1 per sampling day.
Equipment Blanks - only needed for non-dedicated equipement.
MS/MSD = 1 per approximately 20 primary collected samples.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. Table 6. Parameter and Analysis Summary - Appendix IV Assessment Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit [3]	Container [4]	Preservation [5]	Max. Holding Time from Sampling [6]
Field Parameters					
pH	EPA 9040C	0.1 units	–	–	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	–	–	Immediately or within 15 minutes
Temperature*	SM 2550 B	--	–	–	Immediately or within 15 minutes
Turbidity*	SM 2130 B	–	–	–	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	--	–	--	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	--	–	–	Immediately or within 15 minutes
General Chemistry					
Fluoride	SM 4500 F E/11	TBD	Plastic	4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Metals (total and dissolved)					
Antimony	EPA 6010 / 6020 as applicable	0.001 mg/L	Plastic	HNO_3 to pH<2	6 months
Arsenic		0.002			
Barium		0.002			
Beryllium		0.0005			
Cadmium		0.0005			
Chromium		0.002			
Cobalt		0.002			
Lead		0.0005			
Lithium		0.02			
Molybdenum		0.002			
Selenium		0.002			
Thallium		0.0005			
Mercury	EPA 245.1	0.0002	Plastic	HNO_3 to pH<2	28 days
Radium-226 and 228 combined	EPA 9315 and EPA 9320	1.0 and 2.0 pCi/L	Plastic	HNO_3	6 months

Notes:
1. Fluoride and all metals are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent method.
3. Listed reporting limits are the maximum allowable reporting limits.
4. Containers and volumes will be specified by the lab.
5. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
6. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix IV Assessment Monitoring list and are collected for informational purposes only.

+ Iron, Aluminum, Manganese,
- Total only for Mercury & Radiochem
- Dissolved & Total for remainder of Metals

MSP

C25030481-006	80794006, MW-8B	03/17/25 12:39	03/20/25	Aqueous	Same As Above
C25030481-007	80794007, MW-105	03/17/25 11:35	03/20/25	Aqueous	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 2393 Salt Creek Hwy, Casper, WY 82601-9601, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

Energy Laboratories, Inc. verifies the reported results for the analysis has been technically reviewed and approved for release.

If you have any questions regarding these test results, please contact your Project Manager.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Chain of custody agrees with sample labels?	Yes ☑	No ☐	
Samples in proper container/bottle?	Yes ☑	No ☐	
Sample containers intact?	Yes ☑	No ☐	
Sufficient sample volume for indicated test?	Yes ☑	No ☐	
All samples received within holding time? (Exclude analyses that are considered field parameters such as pH, DO, Res Cl, Sulfite, Ferrous Iron, etc.)	Yes ☑	No ☐	
Temp Blank received in all shipping container(s)/cooler(s)?	Yes ☑	No ☐	Not Applicable ☐
Container/Temp Blank temperature:	9.7°C No Ice		
Containers requiring zero headspace have no headspace or bubble that is <6mm (1/4").	Yes ☐	No ☐	No VOA vials submitted ☑
Water - pH acceptable upon receipt?	Yes ☑	No ☐	Not Applicable ☐

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

Trip Blanks and/or Blind Duplicate samples are assigned the earliest collection time for the associated requested analysis in order to evaluate the holding time unless specifically indicated.

Contact and Corrective Action Comments:

The temperature blank temperature in shipping container 1 was 9.7°C and shipping container 2 was 9.0°C. DRS 03/20/25

Notes:
Suggested locations for collection of QA/QC samples in 2025 are listed in Table 2.
App III - Appendix III Detection Monitoring List, Table 5
App IV - Appendix IV Assessment Monitoring List, Table 6
Additional List - Table 7
Required field parameters are listed in Table 5 and Table 6
1. The piezometers do not have dedicated pumps and will need to be sampled by other methods.
2. The sump should be sampled using surface water collection methods via the sump riser.
3. Surface water samples to be collected only if safely accessible and free water is present.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. Total # of QC Samples		0	9	11	4	11

Notes:
Locations to collect samples are **suggestions only** to help with the distribution of QA/QC samples across the site and between facilities while meeting QA/QC objectives for the sampling programs.
Notes for QA/QC
Duplicates = 10-15% of primary collected sample
Field Blanks = approximately 1 per sampling day.
Equipment Blanks - only needed for non-dedicated equipement.
MS/MSD = 1 per approximately 20 primary collected samples.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. Table 6. Parameter and Analysis Summary - Appendix IV Assessment Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit [3]	Container [4]	Preservation [5]	Max. Holding Time from Sampling [6]
Field Parameters					
pH	EPA 9040C	0.1 units	--	--	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	--	--	Immediately or within 15 minutes
Temperature*	SM 2550 B	--	--	--	Immediately or within 15 minutes
Turbidity*	SM 2130 B	--	--	--	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	--	--	--	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	--	--	--	Immediately or within 15 minutes
General Chemistry					
Fluoride	SM 4500 F E/11	TBD	Plastic	4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Metals (total and dissolved)					
Antimony	EPA 6010 / 6020 as applicable	0.001 mg/L	Plastic	HNO_3 to pH<2	6 months
Arsenic		0.002			
Barium		0.002			
Beryllium		0.0005			
Cadmium		0.0005			
Chromium		0.002			
Cobalt		0.002			
Lead		0.0005			
Lithium		0.02			
Molybdenum		0.002			
Selenium		0.002			
Thallium		0.0005			
Mercury	EPA 245.1	0.0002	Plastic	HNO_3 to pH<2	28 days
Radium-226 and 228 combined	EPA 9315 and EPA 9320	1.0 and 2.0 pCi/L	Plastic	HNO_3	6 months

Notes:
1. Fluoride and all metals are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent method.
3. Listed reporting limits are the maximum allowable reporting limits.
4. Containers and volumes will be specified by the lab.
5. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
6. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix IV Assessment Monitoring list and are collected for informational purposes only.

+ Iron, Aluminum, Manganese,
- Total only for Mercury & Radiochem
- Dissolved & Total for remainder of Metals

MSP

ANALYTICAL SUMMARY REPORT

April 24, 2025

Minnesota Valley Testing Laboratories
1126 N Front St
New Ulm, MN 56073-1176

Work Order: C25030619 Quote ID: C15480
Project Name: 81252

Energy Laboratories, Inc. Casper WY received the following 4 samples for Minnesota Valley Testing Laboratories on 3/26/2025 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
C25030619-001	81252001, MW-9N	03/20/25 10:40	03/26/25	Groundwater	Radium 226 + Radium 228, Total Radium 226, Total Radium 228, Total
C25030619-002	81252002, MW-102	03/20/25 11:40	03/26/25	Groundwater	Same As Above
C25030619-003	81252003, MW-103	03/20/25 9:05	03/26/25	Groundwater	Same As Above
C25030619-004	81252004, DUP BAL	03/20/25 9:05	03/26/25	Groundwater	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 2393 Salt Creek Hwy, Casper, WY 82601-9601, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

Energy Laboratories, Inc. verifies the reported results for the analysis has been technically reviewed and approved for release.

If you have any questions regarding these test results, please contact your Project Manager.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Container/Temp Blank temperature:	16.6°C No Ice		
Containers requiring zero headspace have no headspace or bubble that is <6mm (1/4").	Yes ☐	No ☐	No VOA vials submitted ☑
Water - pH acceptable upon receipt?	Yes ☑	No ☐	Not Applicable ☐

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

Trip Blanks and/or Blind Duplicate samples are assigned the earliest collection time for the associated requested analysis in order to evaluate the holding time unless specifically indicated.

Contact and Corrective Action Comments:

The temperature blank temperature in shipping container 1 was 16.6°C and shipping container 2 was 14.2°C. SLR 03/26/25

Notes:
Suggested locations for collection of QA/QC samples in 2025 are listed in Table 2.
App III - Appendix III Detection Monitoring List, Table 5
App IV - Appendix IV Assessment Monitoring List, Table 6
Additional List - Table 7
Required field parameters are listed in Table 5 and Table 6
1. The piezometers do not have dedicated pumps and will need to be sampled by other methods.
2. The sump should be sampled using surface water collection methods via the sump riser.
3. Surface water samples to be collected only if safely accessible and free water is present.

wsp DRAFT - SUBJECT TO CHANGE

Total # of Sample Locations		2	40	53	15	53
Total # of QC Samples		0	9	11	4	11

Notes:
Locations to collect samples are **suggestions only** to help with the distribution of QA/QC samples across the site and between facilities while meeting QA/QC objectives for the sampling programs.
Notes for QA/QC
Duplicates = 10-15% of primary collected sample
Field Blanks = approximately 1 per sampling day.
Equipment Blanks - only needed for non-dedicated equipment.
MS/MSD = 1 per approximately 20 primary collected samples.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. Dissolved Oxygen (DO)*	LSASDPROC-106-R4	–	–	–	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	–	–	–	Immediately or within 15 minutes
General Chemistry					
Fluoride	SM 4500 F E/11	TBD	Plastic	4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Metals (total and dissolved)					
Antimony	EPA 6010 / 6020 as applicable	0.001 mg/L	Plastic	HNO_3 to pH<2	6 months
Arsenic		0.002			
Barium		0.002			
Beryllium		0.0005			
Cadmium		0.0005			
Chromium		0.002			
Cobalt		0.002			
Lead		0.0005			
Lithium		0.02			
Molybdenum		0.002			
Selenium		0.002			
Thallium		0.0005			
Mercury	EPA 245.1	0.0002	Plastic	HNO_3 to pH<2	28 days
Radium-226 and 228 combined	EPA 9315 and EPA 9320	1.0 and 2.0 pCi/L	Plastic	HNO_3	6 months

Notes:
1. Fluoride and all metals are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent method.
3. Listed reporting limits are the maximum allowable reporting limits.
4. Containers and volumes will be specified by the lab.
5. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
6. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.
* Additional parameters that are not part of the Appendix IV Assessment Monitoring list and are collected for informational purposes only.

+ Iron, Aluminum, Manganese,
- Total Only for Mercury & Radiochem
- Dissolved & Total for remainder of Metals

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

ANALYTICAL SUMMARY REPORT

April 18, 2025

Minnesota Valley Testing Laboratories
1126 N Front St
New Ulm, MN 56073-1176

Work Order: C25030524 Quote ID: C15480
Project Name: 81134

Energy Laboratories, Inc. Casper WY received the following 3 samples for Minnesota Valley Testing Laboratories on 3/24/2025 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
C25030524-001	81134001, MW-201	03/19/25 12:02	03/24/25	Aqueous	Radium 226 + Radium 228, Total Radium 226, Total Radium 228, Total
C25030524-002	81134002, MW-202	03/19/25 12:55	03/24/25	Aqueous	Same As Above
C25030524-003	81134003, MW-203	03/19/25 13:52	03/24/25	Aqueous	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 2393 Salt Creek Hwy, Casper, WY 82601-9601, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

Energy Laboratories, Inc. verifies the reported results for the analysis has been technically reviewed and approved for release.

If you have any questions regarding these test results, please contact your Project Manager.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Water - pH acceptable upon receipt?	Yes ☑	No ☐	Not Applicable ☐

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

Trip Blanks and/or Blind Duplicate samples are assigned the earliest collection time for the associated requested analysis in order to evaluate the holding time unless specifically indicated.

Contact and Corrective Action Comments:

The temperature of the sample(s) in shipping container 1 was 8.0°C, shipping container 2 was 8.9°C, shipping container 4 was 7.3°C, shipping container 5 was 8.1°C, and shipping container 6 was 9.0°C. The temperature blank temperature

Notes:
Suggested locations for collection of QA/QC samples in 2025 are listed in Table 2.
App III - Appendix III Detection Monitoring List, Table 5
App IV - Appendix IV Assessment Monitoring List, Table 6
Additional List - Table 7
Required field parameters are listed in Table 5 and Table 6
1. The piezometers do not have dedicated pumps and will need to be sampled by other methods.
2. The sump should be sampled using surface water collection methods via the sump riser.
3. Surface water samples to be collected only if safely accessible and free water is present.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. Total # of Sample Locations		2	40	53	15	53
Total # of QC Samples		0	9	11	4	11

Notes:
Locations to collect samples are **suggestions only** to help with the distribution of QA/QC samples across the site and between facilities while meeting QA/QC objectives for the sampling programs.
Notes for QA/QC
Duplicates = 10-15% of primary collected sample
Field Blanks = approximately 1 per sampling day.
Equipment Blanks - only needed for non-dedicated equipement.
MS/MSD = 1 per approximately 20 primary collected samples.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. Table 6. Parameter and Analysis Summary - Appendix IV Assessment Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit [3]	Container [4]	Preservation [5]	Max. Holding Time from Sampling [6]
Field Parameters					
pH	EPA 9040C	0.1 units	--	--	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	--	--	Immediately or within 15 minutes
Temperature*	SM 2550 B	--	--	--	Immediately or within 15 minutes
Turbidity*	SM 2130 B	--	--	--	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	--	--	--	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	--	--	--	Immediately or within 15 minutes
General Chemistry					
Fluoride	SM 4500 F E/11	TBD	Plastic	4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Metals (total and dissolved)					
Antimony	EPA 6010 / 6020 as applicable	0.001 mg/L	Plastic	HNO_3 to pH<2	6 months
Arsenic		0.002			
Barium		0.002			
Beryllium		0.0005			
Cadmium		0.0005			
Chromium		0.002			
Cobalt		0.002			
Lead		0.0005			
Lithium		0.02			
Molybdenum		0.002			
Selenium		0.002			
Thallium		0.0005			
Mercury	EPA 245.1	0.0002	Plastic	HNO_3 to pH<2	28 days
Radium-226 and 228 combined	EPA 9315 and EPA 9320	1.0 and 2.0 pCi/L	Plastic	HNO_3	6 months

Notes:
1. Fluoride and all metals are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent method.
3. Listed reporting limits are the maximum allowable reporting limits.
4. Containers and volumes will be specified by the lab.
5. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
6. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix IV Assessment Monitoring list and are collected for informational purposes only.

+ Iron, Aluminum, Manganese,
- Total only for Mercury & Radiochem
- Dissolved & Total for remainder of Metals

MSP

Workorder Comments

All analytes with dilution factors greater than 1 (displayed in DF column) required dilution due to matrix or high concentration of target analyte unless otherwise noted and reporting limits (RDL column) have been adjusted accordingly.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

ANALYTICAL SUMMARY REPORT

April 17, 2025

Minnesota Valley Testing Laboratories
1126 N Front St
New Ulm, MN 56073-1176

Work Order: C25030482 Quote ID: C15480
Project Name: 80793

Energy Laboratories, Inc. Casper WY received the following 2 samples for Minnesota Valley Testing Laboratories on 3/20/2025 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
C25030482-001	80793001, MW-1R	03/17/25 16:10	03/20/25	Aqueous	Radium 226 + Radium 228, Total Radium 226, Total Radium 228, Total
C25030482-002	80793002, MW-104	03/17/25 15:13	03/20/25	Aqueous	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 2393 Salt Creek Hwy, Casper, WY 82601-9601, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

Energy Laboratories, Inc. verifies the reported results for the analysis has been technically reviewed and approved for release.

If you have any questions regarding these test results, please contact your Project Manager.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Water - pH acceptable upon receipt?	Yes ☑	No ☐	Not Applicable ☐

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

Trip Blanks and/or Blind Duplicate samples are assigned the earliest collection time for the associated requested analysis in order to evaluate the holding time unless specifically indicated.

Contact and Corrective Action Comments:

The temperature of the sample(s) in shipping container 1 was 9.7°C and shipping container 2 was 9.0°C. DRS 03/20/25

Notes:
Suggested locations for collection of QA/QC samples in 2025 are listed in Table 2.
App III - Appendix III Detection Monitoring List, Table 5
App IV - Appendix IV Assessment Monitoring List, Table 6
Additional List - Table 7
Required field parameters are listed in Table 5 and Table 6
1. The piezometers do not have dedicated pumps and will need to be sampled by other methods.
2. The sump should be sampled using surface water collection methods via the sump riser.
3. Surface water samples to be collected only if safely accessible and free water is present.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. Total # of Sample Locations		2	40	53	15	53
Total # of QC Samples		0	9	11	4	11

Notes:
Locations to collect samples are **suggestions only** to help with the distribution of QA/QC samples across the site and between facilities while meeting QA/QC objectives for the sampling programs.
Notes for QA/QC
Duplicates = 10-15% of primary collected sample
Field Blanks = approximately 1 per sampling day.
Equipment Blanks - only needed for non-dedicated equipement.
MS/MSD = 1 per approximately 20 primary collected samples.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. Table 6. Parameter and Analysis Summary - Appendix IV Assessment Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit [3]	Container [4]	Preservation [5]	Max. Holding Time from Sampling [6]
Field Parameters					
pH	EPA 9040C	0.1 units	--	--	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	--	--	Immediately or within 15 minutes
Temperature*	SM 2550 B	--	--	--	Immediately or within 15 minutes
Turbidity*	SM 2130 B	--	--	--	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	--	--	--	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	--	--	--	Immediately or within 15 minutes
General Chemistry					
Fluoride	SM 4500 F E/11	TBD	Plastic	4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Metals (total and dissolved)					
Antimony	EPA 6010 / 6020 as applicable	0.001 mg/L	Plastic	HNO_3 to pH<2	6 months
Arsenic		0.002			
Barium		0.002			
Beryllium		0.0005			
Cadmium		0.0005			
Chromium		0.002			
Cobalt		0.002			
Lead		0.0005			
Lithium		0.02			
Molybdenum		0.002			
Selenium		0.002			
Thallium		0.0005			
Mercury	EPA 245.1	0.0002	Plastic	HNO_3 to pH<2	28 days
Radium-226 and 228 combined	EPA 9315 and EPA 9320	1.0 and 2.0 pCi/L	Plastic	HNO_3	6 months

Notes:
1. Fluoride and all metals are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent method.
3. Listed reporting limits are the maximum allowable reporting limits.
4. Containers and volumes will be specified by the lab.
5. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
6. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.
* Additional parameters that are not part of the Appendix IV Assessment Monitoring list and are collected for informational purposes only.

+ Iron, Aluminum, Manganese,
- Total Only for Mercury & Radiochem
- Dissolved & Total for remainder of Metals

Event:	March 2025
Sample ID:	213
Sampling Personal:	Ethan Grigg

Weather Conditions: Temp: 25 °F Wind: W @ 10-15 Precip: Sunny / Partly Cloudy / Cloudy

WELL INFORMATION

Well Locked?	YES	NO
Well Labeled?	YES	NO
Repairs Necessary?		
Casing Diameter:	2"	
Water Level Before Purge:	17.19	ft
Depth to Top of Pump:	—	ft
Water Level After Sample:	17.20	ft
Measurement Method:	Electric Water Level Indicator	

SAMPLING INFORMATION

Purging Method:	Bladder	
Sampling Method:	Bladder	
Dedicated Equipment?	YES	NO

Control Settings:		
Purge:	23	Sec.
Recover:	28 27	Sec.
PSI:	—	

Bottle List:	
1 Liter Raw	1 Gal Nitric
500mL Nitric	
500mL Nitric (filtered)	

Duplicate Sample?
YES / NO
Duplicate Sample ID:

C25030529-006	81123006, MW-214	03/19/25 9:40	03/24/25	Aqueous	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 2393 Salt Creek Hwy, Casper, WY 82601-9601, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

Energy Laboratories, Inc. verifies the reported results for the analysis has been technically reviewed and approved for release.

If you have any questions regarding these test results, please contact your Project Manager.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

Trip Blanks and/or Blind Duplicate samples are assigned the earliest collection time for the associated requested analysis in order to evaluate the holding time unless specifically indicated.

Contact and Corrective Action Comments:

The temperature of the sample(s) in shipping container 1 was 8.0°C, shipping container 2 was 8.9°C, shipping container 4 was 7.3°C, shipping container 5 was 8.1°C, and shipping container 6 was 9.0°C. The temperature blank temperature

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Field Datasheet

Groundwater Assessment

Company:	GRE Stanton Station
Event:	March 2025
Sample ID:	214/MS/MSD
Sampling Personal:	Ellen Gress

Weather Conditions: Temp: 25 °F Wind: NW @ 5-10 Precip: (Sunny / Partly Cloudy / Cloudy)

WELL INFORMATION

Well Locked?	(YES)	NO
Well Labeled?	(YES)	NO
Repairs Necessary?		
Casing Diameter:	2"	
Water Level Before Purge:	7.9	ft
Depth to Top of Pump:	—	ft
Water Level After Sample:	8.75	ft
Measurement Method:	Electric Water Level Indicator	

SAMPLING INFORMATION

Purging Method:	Bladder	
Sampling Method:	Bladder	
Dedicated Equipment?	(YES)	NO

Control Settings:	
Purge: 2	Sec.
Recover: 28	Sec.
PSI: —	

Bottle List:	
1 Liter Raw	1 Gal Nitric
500mL Nitric	
500mL Nitric (filtered)	

Duplicate Sample?
(YES) / NO
Duplicate Sample ID:
MS/MSD

Notes:
Suggested locations for collection of QA/QC samples in 2025 are listed in Table 2.
App III - Appendix III Detection Monitoring List, Table 5
App IV - Appendix IV Assessment Monitoring List, Table 6
Additional List - Table 7
Required field parameters are listed in Table 5 and Table 6
1. The piezometers do not have dedicated pumps and will need to be sampled by other methods.
2. The sump should be sampled using surface water collection methods via the sump riser.
3. Surface water samples to be collected only if safely accessible and free water is present.

DRAFT - SUBJECT TO CHANGE

Total # of QC Samples		0	9	11	4	11

Notes:
Locations to collect samples are **suggestions only** to help with the distribution of QA/QC samples across the site and between facilities while meeting QA/QC objectives for the sampling programs.
Notes for QA/QC
Duplicates = 10-15% of primary collected sample
Field Blanks = approximately 1 per sampling day.
Equipment Blanks - only needed for non-dedicated equipement.
MS/MSD = 1 per approximately 20 primary collected samples.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. Table 6. Parameter and Analysis Summary - Appendix IV Assessment Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit [3]	Container [4]	Preservation [5]	Max. Holding Time from Sampling [6]
Field Parameters					
pH	EPA 9040C	0.1 units	–	–	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	–	–	Immediately or within 15 minutes
Temperature*	SM 2550 B	–	–	–	Immediately or within 15 minutes
Turbidity*	SM 2130 B	–	–	–	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	–	–	–	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	–	–	–	Immediately or within 15 minutes
General Chemistry					
Fluoride	SM 4500 F E/11	TBD	Plastic	4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Metals (total and dissolved)					
Antimony	EPA 6010 / 6020 as applicable	0.001 mg/L	Plastic	HNO_3 to pH<2	6 months
Arsenic		0.002			
Barium		0.002			
Beryllium		0.0005			
Cadmium		0.0005			
Chromium		0.002			
Cobalt		0.002			
Lead		0.0005			
Lithium		0.02			
Molybdenum		0.002			
Selenium		0.002			
Thallium		0.0005			
Mercury	EPA 245.1	0.0002	Plastic	HNO_3 to pH<2	28 days
Radium-226 and 228 combined	EPA 9315 and EPA 9320	1.0 and 2.0 pCi/L	Plastic	HNO_3	6 months

Notes:
1. Fluoride and all metals are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent method.
3. Listed reporting limits are the maximum allowable reporting limits.
4. Containers and volumes will be specified by the lab.
5. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
6. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix IV Assessment Monitoring list and are collected for informational purposes only.

+ Iron, Aluminum, Manganese,
- Total only for Mercury & Radiochem
- Dissolved & Total for remainder of Metals

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. Workorder Comments

All analytes with dilution factors greater than 1 (displayed in DF column) required dilution due to matrix or high concentration of target analyte unless otherwise noted and reporting limits (RDL column) have been adjusted accordingly.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

C25030530-010	80949010, MW-222	03/18/25 8:50	03/24/25	Aqueous	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 2393 Salt Creek Hwy, Casper, WY 82601-9601, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

Energy Laboratories, Inc. verifies the reported results for the analysis has been technically reviewed and approved for release.

If you have any questions regarding these test results, please contact your Project Manager.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Container/Temp Blank temperature:	9.4°C No Ice		
Containers requiring zero headspace have no headspace or bubble that is <6mm (1/4").	Yes ☐	No ☐	No VOA vials submitted ☑
Water - pH acceptable upon receipt?	Yes ☑	No ☐	Not Applicable ☐

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

Trip Blanks and/or Blind Duplicate samples are assigned the earliest collection time for the associated requested analysis in order to evaluate the holding time unless specifically indicated.

Contact and Corrective Action Comments:

The temperature of the sample(s) in shipping container 1 was 8.0°C, shipping container 2 was 8.9°C, shipping container 4 was 7.3°C, shipping container 5 was 8.1°C, and shipping container 6 was 9.0°C. The temperature blank temperature

Notes:
Suggested locations for collection of QA/QC samples in 2025 are listed in Table 2.
App III - Appendix III Detection Monitoring List, Table 5
App IV - Appendix IV Assessment Monitoring List, Table 6
Additional List - Table 7
Required field parameters are listed in Table 5 and Table 6
1. The piezometers do not have dedicated pumps and will need to be sampled by other methods.
2. The sump should be sampled using surface water collection methods via the sump riser.
3. Surface water samples to be collected only if safely accessible and free water is present.

Total # of Sample Locations		2	40	53	15	53
Total # of QC Samples		0	9	11	4	11

Notes:
Locations to collect samples are **suggestions only** to help with the distribution of QA/QC samples across the site and between facilities while meeting QA/QC objectives for the sampling programs.
Notes for QA/QC
Duplicates = 10-15% of primary collected sample
Field Blanks = approximately 1 per sampling day.
Equipment Blanks - only needed for non-dedicated equipement.
MS/MSD = 1 per approximately 20 primary collected samples.

Table 6. Parameter and Analysis Summary - Appendix IV Assessment Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit [3]	Container [4]	Preservation [5]	Max. Holding Time from Sampling [6]
Field Parameters					
pH	EPA 9040C	0.1 units	--	--	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	--	--	Immediately or within 15 minutes
Temperature*	SM 2550 B	--	--	--	Immediately or within 15 minutes
Turbidity*	SM 2130 B	--	--	--	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	--	--	--	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	--	--	--	Immediately or within 15 minutes
General Chemistry					
Fluoride	SM 4500 F E/11	TBD	Plastic	4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Metals (total and dissolved)					
Antimony	EPA 6010 / 6020 as applicable	0.001 mg/L	Plastic	HNO_3 to pH<2	6 months
Arsenic		0.002			
Barium		0.002			
Beryllium		0.0005			
Cadmium		0.0005			
Chromium		0.002			
Cobalt		0.002			
Lead		0.0005			
Lithium		0.02			
Molybdenum		0.002			
Selenium		0.002			
Thallium		0.0005			
Mercury	EPA 245.1	0.0002	Plastic	HNO_3 to pH<2	28 days
Radium-226 and 228 combined	EPA 9315 and EPA 9320	1.0 and 2.0 pCi/L	Plastic	HNO_3	6 months

Notes:
1. Fluoride and all metals are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent method.
3. Listed reporting limits are the maximum allowable reporting limits.
4. Containers and volumes will be specified by the lab.
5. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
6. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.
* Additional parameters that are not part of the Appendix IV Assessment Monitoring list and are collected for informational purposes only.

+ Iron, Aluminum, Manganese
- Total only for Mercury & Radiochem
- Dissolved & Total for remainder of Metals

ANALYTICAL SUMMARY REPORT

April 22, 2025

Minnesota Valley Testing Laboratories
1126 N Front St
New Ulm, MN 56073-1176

Work Order: C25030527 Quote ID: C15480
Project Name: 80950

Energy Laboratories, Inc. Casper WY received the following 3 samples for Minnesota Valley Testing Laboratories on 3/24/2025 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
C25030527-001	80950001, MW-300/MS/MSD	03/18/25 13:34	03/24/25	Aqueous	Radium 226 + Radium 228, Total Radium 226, Total Radium 228, Total
C25030527-002	80950002, MW-301	03/18/25 11:25	03/24/25	Aqueous	Same As Above
C25030527-003	80950003, MW-PB3	03/18/25 12:27	03/24/25	Aqueous	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 2393 Salt Creek Hwy, Casper, WY 82601-9601, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

Energy Laboratories, Inc. verifies the reported results for the analysis has been technically reviewed and approved for release.

If you have any questions regarding these test results, please contact your Project Manager.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. Water - pH acceptable upon receipt?	Yes ☑	No ☐	Not Applicable ☐

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

Trip Blanks and/or Blind Duplicate samples are assigned the earliest collection time for the associated requested analysis in order to evaluate the holding time unless specifically indicated.

Contact and Corrective Action Comments:

The temperature of the sample(s) in shipping container 1 was 8.0°C, shipping container 2 was 8.9°C, shipping container 4 was 7.3°C, shipping container 5 was 8.1°C, and shipping container 6 was 9.0°C. The temperature blank temperature

Field Datasheet

Groundwater Assessment

2616 E. Broadway Ave, Bismarck, ND
Phone: (701) 258-9720

Company: GRE Stanton Station
Event: March 2025
Sample ID: PB3
Sampling Personal: Jeremy Meyer

Weather Conditions: Temp: 25°F Wind: N @ 5-10 Precip: Sunny / Partly Cloudy / Cloudy

WELL INFORMATION

Well Locked?	YES	NO
Well Labeled?	YES	NO
Repairs Necessary?		
Casing Diameter:	2"	
Water Level Before Purge:	29.37	ft
Depth to Top of Pump:	—	ft
Water Level After Sample:	30.10	ft
Measurement Method:	Electric Water Level Indicator	

SAMPLING INFORMATION

Purging Method:	Bladder	
Sampling Method:	Bladder	
Dedicated Equipment?	YES	NO

Control Settings:	
Purge: 3	Sec.
Recover: 57	Sec.
PSI: —	

Bottle List:
1 Liter Raw
1 Gal Nitric
500mL Nitric
500mL Nitric (filtered)

Duplicate Sample? YES / NO
Duplicate Sample ID: —

Certificate of Analysis

Approval

All data reported has been reviewed and approved by:

Claudette Carroll, Lab Manager Bismarck, ND

Analyses performed under Minnesota Department of Health Accreditation conforms to the current TNI standards.

NEW ULM LAB CERTIFICATIONS:
MN LAB # 027-015-125 ND WW/DW # R-040

BISMARCK LAB CERTIFICATIONS:
MN LAB # 038-999-267 ND W/DW # ND-016

Workorder Comments

All analytes with dilution factors greater than 1 (displayed in DF column) required dilution due to matrix or high concentration of target analyte unless otherwise noted and reporting limits (RDL column) have been adjusted accordingly.

Table 7: Additional List Parameter and Analysis Summary

Parameter [1]	Method Reference [2]	Reporting Limit	Preparation Method Reference [2]	Sample Container [3]	Required Preservation [4]	Maximum Holding Time from Sampling [5]
General Chemistry						
Total Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Bicarbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Carbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Metals (Total and Dissolved)						
Iron	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Magnesium	EPA 6010D	0.2 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Potassium	EPA 6010D	3.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Sodium	EPA 6010D	1.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Aluminum	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Manganese	EPA 6010D	0.05 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months

Notes:

1. All listed parameters are tested in the laboratory. Listed parameters are to be collected in conjunction with other CCR parameter lists (Table 2 and Table 3).

2. Or equivalent method.
3. Containers and volumes will be specified by the analytical laboratory.
4. In addition to the required preservation for each sample container, sufficient ice should be placed with the sample containers in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when samples arrive, measurement of the temperature of samples immediately upon receipt is necessary to confirm that the 4° C temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible following collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid, without the use of qualifiers.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

ANALYTICAL SUMMARY REPORT

July 30, 2025

Minnesota Valley Testing Laboratories
1126 N Front St
New Ulm, MN 56073-1176

Work Order: C25060962 Quote ID: C15480
Project Name: 90424

Energy Laboratories, Inc. Casper WY received the following 6 samples for Minnesota Valley Testing Laboratories on 6/27/2025 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
C25060962-001	90424001, MW-6B	06/23/25 15:03	06/27/25	Groundwater	Radium 226 + Radium 228, Total Radium 226, Total Radium 228, Total
C25060962-002	90424002, MW-7A	06/23/25 09:47	06/27/25	Groundwater	Same As Above
C25060962-003	90424003, MW-7B	06/23/25 08:18	06/27/25	Groundwater	Same As Above
C25060962-004	90424004, MW-8B	06/23/25 12:43	06/27/25	Groundwater	Same As Above
C25060962-005	90424005, DUP UP	06/23/25 12:43	06/27/25	Groundwater	Same As Above
C25060962-006	90424006, MW-105	06/23/25 11:18	06/27/25	Groundwater	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 2393 Salt Creek Hwy, Casper, WY 82601-9601, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

Energy Laboratories, Inc. verifies the reported results for the analysis has been technically reviewed and approved for release.

If you have any questions regarding these test results, please contact your Project Manager.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Water - pH acceptable upon receipt?	Yes ☑	No ☐	Not Applicable ☐

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

Trip Blanks and/or Blind Duplicate samples are assigned the earliest collection time for the associated requested analysis in order to evaluate the holding time unless specifically indicated.

Contact and Corrective Action Comments:

The temperature blank temperature in shipping container 1 was 21.7°C, shipping container 2 was 22.2°C, shipping container 3 was 21.9°C, shipping container 4 was 22.0°C, shipping container 5 was 22.0°C. shipping container 6 was

Table 7: Additional List Parameter and Analysis Summary

Parameter [1]	Method Reference [2]	Reporting Limit	Preparation Method Reference [2]	Sample Container [3]	Required Preservation [4]	Maximum Holding Time from Sampling [5]
General Chemistry						
Total Alkalinity	SM 2320B	10 mg/L	–	Plastic	≤ 4° C	14 days
Bicarbonate Alkalinity	SM 2320B	10 mg/L	–	Plastic	≤ 4° C	14 days
Carbonate Alkalinity	SM 2320B	10 mg/L	–	Plastic	≤ 4° C	14 days
Metals (Total and Dissolved)						
Iron	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Magnesium	EPA 6010D	0.2 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Potassium	EPA 6010D	3.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Sodium	EPA 6010D	1.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Aluminum	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Manganese	EPA 6010D	0.05 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months

Notes:

1. All listed parameters are tested in the laboratory. Listed parameters are to be collected in conjunction with other CCR parameter lists (Table 2 and Table 3).

2. Or equivalent method.
3. Containers and volumes will be specified by the analytical laboratory.
4. In addition to the required preservation for each sample container, sufficient ice should be placed with the sample containers in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when samples arrive, measurement of the temperature of samples immediately upon receipt is necessary to confirm that the 4° C temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible following collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid, without the use of qualifiers.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Table 5. Parameter and Analysis Summary - Appendix III Detection Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit	Container [3]	Preservation [4]	Max. Holding Time from Sampling [5]
Field Parameters					
pH	EPA 9040C	0.1 units	–	–	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	–	–	Immediately or within 15 minutes
Temperature*	SM 2550 B	–	–	–	Immediately or within 15 minutes
Turbidity*	SM 2130 B	–	–	–	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	–	–	–	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	–	–	–	Immediately or within 15 minutes
General Chemistry					
Chloride	SM 4500 Cl E/11	1.0 mg/L	Plastic	4° ± 2°C	28 days
Fluoride	SM 4500 F E/11	TBD		4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Sulfate	ASTM D516-16	5.0 mg/L		4° ± 2°C	28 days
Total Dissolved Solids	USGS I-1750-85	5.0 mg/L		4° ± 2°C	7 days
Metals (total and dissolved)					
Boron	EPA 6010	0.1	Plastic	HNO_3 to pH<2	6 months
Calcium		1.0			

Notes:
1. Boron, calcium, chloride, fluoride, sulfate, and total dissolved solids are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent methods.
3. Containers and volumes will be specified by the lab.
4. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix III Detection Monitoring list and are collected for informational purposes only.

Notes:
1. Fluoride and all metals are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent method.
3. Listed reporting limits are the maximum allowable reporting limits.
4. Containers and volumes will be specified by the lab.
5. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
6. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix IV Assessment Monitoring list and are collected for informational purposes only.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Workorder Comments

All analytes with dilution factors greater than 1 (displayed in DF column) required dilution due to matrix or high concentration of target analyte unless otherwise noted and reporting limits (RDL column) have been adjusted accordingly.

Table 7: Additional List Parameter and Analysis Summary

Parameter [1]	Method Reference [2]	Reporting Limit	Preparation Method Reference [2]	Sample Container [3]	Required Preservation [4]	Maximum Holding Time from Sampling [5]
General Chemistry						
Total Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Bicarbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Carbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Metals (Total and Dissolved)						
Iron	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Magnesium	EPA 6010D	0.2 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Potassium	EPA 6010D	3.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Sodium	EPA 6010D	1.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Aluminum	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Manganese	EPA 6010D	0.05 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months

Notes:

1. All listed parameters are tested in the laboratory. Listed parameters are to be collected in conjunction with other CCR parameter lists (Table 2 and Table 3).

2. Or equivalent method.
3. Containers and volumes will be specified by the analytical laboratory.
4. In addition to the required preservation for each sample container, sufficient ice should be placed with the sample containers in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when samples arrive, measurement of the temperature of samples immediately upon receipt is necessary to confirm that the 4° C temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible following collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid, without the use of qualifiers.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

ANALYTICAL SUMMARY REPORT

August 07, 2025

Minnesota Valley Testing Laboratories
1126 N Front St
New Ulm, MN 56073-1176

Work Order: C25070287 Quote ID: C15480
Project Name: 90421

Energy Laboratories, Inc. Casper WY received the following 4 samples for Minnesota Valley Testing Laboratories on 7/8/2025 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
C25070287-001	90421001, MW-9N	06/23/25 07:35	07/08/25	Aqueous	Radium 226 + Radium 228, Total Radium 226, Total Radium 228, Total
C25070287-002	90421002, MW-102	06/23/25 08:26	07/08/25	Aqueous	Same As Above
C25070287-003	90421003, MW-103	06/23/25 09:20	07/08/25	Aqueous	Same As Above
C25070287-004	90421004, DUP BAL	06/23/25 09:30	07/08/25	Aqueous	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 2393 Salt Creek Hwy, Casper, WY 82601-9601, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

Energy Laboratories, Inc. verifies the reported results for the analysis has been technically reviewed and approved for release.

If you have any questions regarding these test results, please contact your Project Manager.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Container/Temp Blank temperature:	25.0°C No Ice		
Containers requiring zero headspace have no headspace or bubble that is <6mm (1/4").	Yes ☐	No ☐	No VOA vials submitted ☑
Water - pH acceptable upon receipt?	Yes ☑	No ☐	Not Applicable ☐

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

Trip Blanks and/or Blind Duplicate samples are assigned the earliest collection time for the associated requested analysis in order to evaluate the holding time unless specifically indicated.

Contact and Corrective Action Comments:

Table 7: Additional List Parameter and Analysis Summary

Parameter [1]	Method Reference [2]	Reporting Limit	Preparation Method Reference [2]	Sample Container [3]	Required Preservation [4]	Maximum Holding Time from Sampling [5]
General Chemistry						
Total Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Bicarbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Carbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Metals (Total and Dissolved)						
Iron	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Magnesium	EPA 6010D	0.2 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Potassium	EPA 6010D	3.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Sodium	EPA 6010D	1.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Aluminum	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Manganese	EPA 6010D	0.05 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months

Notes:

1. All listed parameters are tested in the laboratory. Listed parameters are to be collected in conjunction with other CCR parameter lists (Table 2 and Table 3).

2. Or equivalent method.
3. Containers and volumes will be specified by the analytical laboratory.
4. In addition to the required preservation for each sample container, sufficient ice should be placed with the sample containers in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when samples arrive, measurement of the temperature of samples immediately upon receipt is necessary to confirm that the 4° C temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible following collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid, without the use of qualifiers.

Table 7: Additional List Parameter and Analysis Summary

Parameter [1]	Method Reference [2]	Reporting Limit	Preparation Method Reference [2]	Sample Container [3]	Required Preservation [4]	Maximum Holding Time from Sampling [5]
General Chemistry						
Total Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Bicarbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Carbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Metals (Total and Dissolved)						
Iron	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Magnesium	EPA 6010D	0.2 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Potassium	EPA 6010D	3.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Sodium	EPA 6010D	1.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Aluminum	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Manganese	EPA 6010D	0.05 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months

Notes:

1. All listed parameters are tested in the laboratory. Listed parameters are to be collected in conjunction with other CCR parameter lists (Table 2 and Table 3).

2. Or equivalent method.
3. Containers and volumes will be specified by the analytical laboratory.
4. In addition to the required preservation for each sample container, sufficient ice should be placed with the sample containers in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when samples arrive, measurement of the temperature of samples immediately upon receipt is necessary to confirm that the 4° C temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible following collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid, without the use of qualifiers.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

ANALYTICAL SUMMARY REPORT

July 30, 2025

Minnesota Valley Testing Laboratories
1126 N Front St
New Ulm, MN 56073-1176

Work Order: C25060965 Quote ID: C15480
Project Name: 90622

Energy Laboratories, Inc. Casper WY received the following 3 samples for Minnesota Valley Testing Laboratories on 6/27/2025 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
C25060965-001	90622001, MW-1R	06/24/25 08:18	06/27/25	Groundwater	Radium 226 + Radium 228, Total Radium 226, Total Radium 228, Total
C25060965-002	90622002, DUP Internal	06/24/25 08:18	06/27/25	Groundwater	
C25060965-003	90622003, MW-104	06/24/25 09:30	06/27/25	Groundwater	Radium 226 + Radium 228, Total Radium 226, Total Radium 228, Total

The analyses presented in this report were performed by Energy Laboratories, Inc., 2393 Salt Creek Hwy, Casper, WY 82601-9601, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

Energy Laboratories, Inc. verifies the reported results for the analysis has been technically reviewed and approved for release.

If you have any questions regarding these test results, please contact your Project Manager.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Water - pH acceptable upon receipt?	Yes ☑	No ☐	Not Applicable ☐

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

Trip Blanks and/or Blind Duplicate samples are assigned the earliest collection time for the associated requested analysis in order to evaluate the holding time unless specifically indicated.

Contact and Corrective Action Comments:

The temperature blank temperature in shipping container 1 was 21.7°C, shipping container 2 was 22.2°C, shipping container 3 was 21.9°C, shipping container 4 was 22.0°C, shipping container 5 was 22.0°C. shipping container 6 was

Field Datasheet

Groundwater Assessment

Company:	GRE Stanton Station
Event:	June 2025
Sample ID:	104
Sampling Personal:	Ethan Cress

Weather Conditions: Temp: 60 °F Wind: NW @ 5-10 Precip: Sunny / Partly Cloudy / Cloudy

WELL INFORMATION

Well Locked?	(YES)	NO
Well Labeled?	(YES)	NO
Repairs Necessary?		
Casing Diameter:	2"	
Water Level Before Purge:	21.19	ft
Depth to Top of Pump:	—	ft
Water Level After Sample:	21.27	ft
Measurement Method:	Electric Water Level Indicator	

SAMPLING INFORMATION

Purging Method:	Bladder	
Sampling Method:	Bladder	
Dedicated Equipment?	(YES)	NO

Control Settings:		
Purge:	3	Sec.
Recover:	27	Sec.
PSI:	—	

Bottle List:
1 Liter Raw
500mL Nitric
500mL Nitric (filtered)
1 Gal Nitric

Duplicate Sample? YES (NO)
Duplicate Sample ID: —

Table 7: Additional List Parameter and Analysis Summary

Parameter [1]	Method Reference [2]	Reporting Limit	Preparation Method Reference [2]	Sample Container [3]	Required Preservation [4]	Maximum Holding Time from Sampling [5]
General Chemistry						
Total Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Bicarbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Carbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Metals (Total and Dissolved)						
Iron	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Magnesium	EPA 6010D	0.2 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Potassium	EPA 6010D	3.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Sodium	EPA 6010D	1.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Aluminum	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Manganese	EPA 6010D	0.05 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months

Notes:

1. All listed parameters are tested in the laboratory. Listed parameters are to be collected in conjunction with other CCR parameter lists (Table 2 and Table 3).

2. Or equivalent method.
3. Containers and volumes will be specified by the analytical laboratory.
4. In addition to the required preservation for each sample container, sufficient ice should be placed with the sample containers in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when samples arrive, measurement of the temperature of samples immediately upon receipt is necessary to confirm that the 4° C temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible following collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid, without the use of qualifiers.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Table 5. Parameter and Analysis Summary - Appendix III Detection Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit	Container [3]	Preservation [4]	Max. Holding Time from Sampling [5]
Field Parameters					
pH	EPA 9040C	0.1 units	–	–	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	–	–	Immediately or within 15 minutes
Temperature*	SM 2550 B	–	–	–	Immediately or within 15 minutes
Turbidity*	SM 2130 B	–	–	–	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	–	–	–	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	–	–	–	Immediately or within 15 minutes
General Chemistry					
Chloride	SM 4500 Cl E/11	1.0 mg/L	Plastic	4° ± 2°C	28 days
Fluoride	SM 4500 F E/11	TBD		4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Sulfate	ASTM D516-16	5.0 mg/L		4° ± 2°C	28 days
Total Dissolved Solids	USGS I-1750-85	5.0 mg/L		4° ± 2°C	7 days
Metals (total and dissolved)					
Boron	EPA 6010	0.1	Plastic	HNO_3 to pH<2	6 months
Calcium		1.0			

Notes:
1. Boron, calcium, chloride, fluoride, sulfate, and total dissolved solids are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent methods.
3. Containers and volumes will be specified by the lab.
4. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix III Detection Monitoring list and are collected for informational purposes only.

Table 7: Additional List Parameter and Analysis Summary

Parameter [1]	Method Reference [2]	Reporting Limit	Preparation Method Reference [2]	Sample Container [3]	Required Preservation [4]	Maximum Holding Time from Sampling [5]
General Chemistry						
Total Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Bicarbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Carbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Metals (Total and Dissolved)						
Iron	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Magnesium	EPA 6010D	0.2 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Potassium	EPA 6010D	3.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Sodium	EPA 6010D	1.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Aluminum	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Manganese	EPA 6010D	0.05 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months

Notes:

1. All listed parameters are tested in the laboratory. Listed parameters are to be collected in conjunction with other CCR parameter lists (Table 2 and Table 3).

2. Or equivalent method.
3. Containers and volumes will be specified by the analytical laboratory.
4. In addition to the required preservation for each sample container, sufficient ice should be placed with the sample containers in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when samples arrive, measurement of the temperature of samples immediately upon receipt is necessary to confirm that the 4° C temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible following collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid, without the use of qualifiers.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

ANALYTICAL SUMMARY REPORT

July 30, 2025

Minnesota Valley Testing Laboratories
1126 N Front St
New Ulm, MN 56073-1176

Work Order: C25060967 Quote ID: C15480
Project Name: 90611

Energy Laboratories, Inc. Casper WY received the following 4 samples for Minnesota Valley Testing Laboratories on 6/27/2025 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
C25060967-001	90611001, MW-201	06/24/25 12:30	06/27/25	Groundwater	Radium 226 + Radium 228, Total Radium 226, Total Radium 228, Total
C25060967-002	90611002, MW-202	06/24/25 11:25	06/27/25	Groundwater	Same As Above
C25060967-003	90611003, MW-203	06/24/25 10:27	06/27/25	Groundwater	Same As Above
C25060967-004	90611004, FB BAI	06/24/25 12:09	06/27/25	Groundwater	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 2393 Salt Creek Hwy, Casper, WY 82601-9601, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

Energy Laboratories, Inc. verifies the reported results for the analysis has been technically reviewed and approved for release.

If you have any questions regarding these test results, please contact your Project Manager.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Water - pH acceptable upon receipt?	Yes ☑	No ☐	Not Applicable ☐

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

Trip Blanks and/or Blind Duplicate samples are assigned the earliest collection time for the associated requested analysis in order to evaluate the holding time unless specifically indicated.

Sodium	EPA 6010D	1.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Aluminum	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Manganese	EPA 6010D	0.05 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months

Notes:

1. All listed parameters are tested in the laboratory. Listed parameters are to be collected in conjunction with other CCR parameter lists (Table 2 and Table 3).

2. Or equivalent method.
3. Containers and volumes will be specified by the analytical laboratory.
4. In addition to the required preservation for each sample container, sufficient ice should be placed with the sample containers in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when samples arrive, measurement of the temperature of samples immediately upon receipt is necessary to confirm that the 4° C temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible following collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid, without the use of qualifiers.

Total Dissolved Solids	USGS I-1750-85	5.0 mg/L		4° ± 2°C	7 days
Metals (total and dissolved)					
Boron	EPA 6010	0.1	Plastic	HNO_3 to pH<2	6 months
Calcium		1.0			

Notes:
1. Boron, calcium, chloride, fluoride, sulfate, and total dissolved solids are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent methods.
3. Containers and volumes will be specified by the lab.
4. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix III Detection Monitoring list and are collected for informational purposes only.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Table 6. Parameter and Analysis Summary - Appendix IV Assessment Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit [3]	Container [4]	Preservation [5]	Max. Holding Time from Sampling [6]
Field Parameters					
pH	EPA 9040C	0.1 units	--	--	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	--	--	Immediately or within 15 minutes
Temperature*	SM 2550 B	--	--	--	Immediately or within 15 minutes
Turbidity*	SM 2130 B	--	--	--	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-108-R4	--	--	--	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	--	--	--	Immediately or within 15 minutes
General Chemistry					
Fluoride	SM 4500 F E/11	TBD	Plastic	4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Metals (total and dissolved)					
Antimony	EPA 6010 / 6020 as applicable	0.001 mg/L	Plastic	HNO_3 to pH<2	6 months
Arsenic		0.002			
Barium		0.002			
Beryllium		0.0005			
Cadmium		0.0005			
Chromium		0.002			
Cobalt		0.002			
Lead		0.0005			
Lithium		0.02			
Molybdenum		0.002			
Selenium		0.002			
Thallium		0.0005			
Mercury	EPA 245.1	0.0002	Plastic	HNO_3 to pH<2	28 days
Radium-226 and 228 combined	EPA 9315 and EPA 9320	1.0 and 2.0 pCi/L	Plastic	HNO_3	6 months

Notes:
1. Fluoride and all metals are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent method.
3. Listed reporting limits are the maximum allowable reporting limits.
4. Containers and volumes will be specified by the lab.
5. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
6. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix IV Assessment Monitoring list and are collected for informational purposes only.

Table 7: Additional List Parameter and Analysis Summary

Parameter [1]	Method Reference [2]	Reporting Limit	Preparation Method Reference [2]	Sample Container [3]	Required Preservation [4]	Maximum Holding Time from Sampling [5]
General Chemistry						
Total Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Bicarbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Carbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Metals (Total and Dissolved)						
Iron	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Magnesium	EPA 6010D	0.2 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Potassium	EPA 6010D	3.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Sodium	EPA 6010D	1.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Aluminum	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Manganese	EPA 6010D	0.05 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months

Notes:

1. All listed parameters are tested in the laboratory. Listed parameters are to be collected in conjunction with other CCR parameter lists (Table 2 and Table 3).

2. Or equivalent method.
3. Containers and volumes will be specified by the analytical laboratory.
4. In addition to the required preservation for each sample container, sufficient ice should be placed with the sample containers in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when samples arrive, measurement of the temperature of samples immediately upon receipt is necessary to confirm that the 4° C temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible following collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid, without the use of qualifiers.

Table 5. Parameter and Analysis Summary - Appendix III Detection Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit	Container [3]	Preservation [4]	Max. Holding Time from Sampling [5]
Field Parameters					
pH	EPA 9040C	0.1 units	–	–	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	–	–	Immediately or within 15 minutes
Temperature*	SM 2550 B	–	–	–	Immediately or within 15 minutes
Turbidity*	SM 2130 B	–	–	–	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	–	–	–	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	–	–	–	Immediately or within 15 minutes
General Chemistry					
Chloride	SM 4500 Cl E/11	1.0 mg/L	Plastic	4° ± 2°C	28 days
Fluoride	SM 4500 F E/11	TBD		4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Sulfate	ASTM D516-16	5.0 mg/L		4° ± 2°C	28 days
Total Dissolved Solids	USGS I-1750-85	5.0 mg/L		4° ± 2°C	7 days
Metals (total and dissolved)					
Boron	EPA 6010	0.1	Plastic	HNO_3 to pH<2	6 months
Calcium		1.0			

Notes:
1. Boron, calcium, chloride, fluoride, sulfate, and total dissolved solids are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent methods.
3. Containers and volumes will be specified by the lab.
4. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix III Detection Monitoring list and are collected for informational purposes only.

Cobalt		0.002			
Lead		0.0005			
Lithium		0.02			
Molybdenum		0.002			
Selenium		0.002			
Thallium		0.0005			
Mercury	EPA 245.1	0.0002	Plastic	HNO_3 to pH<2	28 days
Radium-226 and 228 combined	EPA 9315 and EPA 9320	1.0 and 2.0 pCi/L	Plastic	HNO_3	6 months

Notes:
1. Fluoride and all metals are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent method.
3. Listed reporting limits are the maximum allowable reporting limits.
4. Containers and volumes will be specified by the lab.
5. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
6. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix IV Assessment Monitoring list and are collected for informational purposes only.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

ANALYTICAL SUMMARY REPORT

July 30, 2025

Minnesota Valley Testing Laboratories
1126 N Front St
New Ulm, MN 56073-1176

Work Order: C25060960 Quote ID: C15480
Project Name: 90422

Energy Laboratories, Inc. Casper WY received the following 6 samples for Minnesota Valley Testing Laboratories on 6/27/2025 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
C25060960-001	90422001, MW-210	06/23/25 13:45	06/27/25	Groundwater	Radium 226 + Radium 228, Total Radium 226, Total Radium 228, Total
C25060960-002	90422002, MW-211	06/23/25 10:11	06/27/25	Groundwater	Same As Above
C25060960-003	90422003, MW-212	06/23/25 11:41	06/27/25	Groundwater	Same As Above
C25060960-004	90422004, MW-213	06/23/25 14:38	06/27/25	Groundwater	Same As Above
C25060960-005	90422005, DUP 2022	06/23/25 14:38	06/27/25	Groundwater	Same As Above
C25060960-006	90422006, MW-214	06/23/25 12:57	06/27/25	Groundwater	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 2393 Salt Creek Hwy, Casper, WY 82601-9601, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

Energy Laboratories, Inc. verifies the reported results for the analysis has been technically reviewed and approved for release.

If you have any questions regarding these test results, please contact your Project Manager.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

Trip Blanks and/or Blind Duplicate samples are assigned the earliest collection time for the associated requested analysis in order to evaluate the holding time unless specifically indicated.

Contact and Corrective Action Comments:

The temperature blank temperature in shipping container 1 was 21.7°C, shipping container 2 was 22.2°C, shipping container 3 was 21.9°C, shipping container 4 was 22.0°C, shipping container 5 was 22.0°C. shipping container 6 was

Table 7: Additional List Parameter and Analysis Summary

Parameter [1]	Method Reference [2]	Reporting Limit	Preparation Method Reference [2]	Sample Container [3]	Required Preservation [4]	Maximum Holding Time from Sampling [5]
General Chemistry						
Total Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Bicarbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Carbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Metals (Total and Dissolved)						
Iron	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Magnesium	EPA 6010D	0.2 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Potassium	EPA 6010D	3.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Sodium	EPA 6010D	1.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Aluminum	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Manganese	EPA 6010D	0.05 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months

Notes:

1. All listed parameters are tested in the laboratory. Listed parameters are to be collected in conjunction with other CCR parameter lists (Table 2 and Table 3).

2. Or equivalent method.
3. Containers and volumes will be specified by the analytical laboratory.
4. In addition to the required preservation for each sample container, sufficient ice should be placed with the sample containers in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when samples arrive, measurement of the temperature of samples immediately upon receipt is necessary to confirm that the 4° C temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible following collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid, without the use of qualifiers.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Table 5. Parameter and Analysis Summary - Appendix III Detection Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit	Container [3]	Preservation [4]	Max. Holding Time from Sampling [5]
Field Parameters					
pH	EPA 9040C	0.1 units	–	–	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	–	–	Immediately or within 15 minutes
Temperature*	SM 2550 B	–	–	–	Immediately or within 15 minutes
Turbidity*	SM 2130 B	–	–	–	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	–	–	–	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	–	–	–	Immediately or within 15 minutes
General Chemistry					
Chloride	SM 4500 Cl E/11	1.0 mg/L	Plastic	4° ± 2°C	28 days
Fluoride	SM 4500 F E/11	TBD		4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Sulfate	ASTM D516-16	5.0 mg/L		4° ± 2°C	28 days
Total Dissolved Solids	USGS I-1750-85	5.0 mg/L		4° ± 2°C	7 days
Metals (total and dissolved)					
Boron	EPA 6010	0.1	Plastic	HNO_3 to pH<2	6 months
Calcium		1.0			

Notes:
1. Boron, calcium, chloride, fluoride, sulfate, and total dissolved solids are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent methods.
3. Containers and volumes will be specified by the lab.
4. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix III Detection Monitoring list and are collected for informational purposes only.

Water Level After Sample:	15.90	ft
Measurement Method:	Electric Water Level Indicator	

SAMPLING INFORMATION

Purging Method:	Bladder	
Sampling Method:	Bladder	
Dedicated Equipment?	(YES)	NO

Control Settings:	
Purge: 2	Sec.
Recover: 2e	Sec.
PSI: —	

Bottle List:		
1 Liter Raw	1 Gal Nitric	x2
500mL Nitric		
500mL Nitric (filtered)		

Duplicate Sample?
(YES) / NO
Duplicate Sample ID:
Dup 2022

Task Comments

4422197 - METb/3741

Post digestion spike and post digestion spike duplicate recovery for sodium was low; the associated laboratory control sample recovery was acceptable.

Analysis Results Comments

Barium, Dissolved

Matrix spike and/or matrix spike duplicate recovery was high; the associated laboratory fortified blank recovery was acceptable.

Molybdenum, Dissolved

Matrix spike and/or matrix spike duplicate recovery was high; the associated laboratory fortified blank recovery was acceptable.

Sulfate

Matrix spike and/or matrix spike duplicate recovery was low; the associated laboratory control sample recovery was acceptable.

Table 7: Additional List Parameter and Analysis Summary

Parameter [1]	Method Reference [2]	Reporting Limit	Preparation Method Reference [2]	Sample Container [3]	Required Preservation [4]	Maximum Holding Time from Sampling [5]
General Chemistry						
Total Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Bicarbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Carbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Metals (Total and Dissolved)						
Iron	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Magnesium	EPA 6010D	0.2 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Potassium	EPA 6010D	3.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Sodium	EPA 6010D	1.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Aluminum	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Manganese	EPA 6010D	0.05 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months

Notes:

1. All listed parameters are tested in the laboratory. Listed parameters are to be collected in conjunction with other CCR parameter lists (Table 2 and Table 3).

2. Or equivalent method.
3. Containers and volumes will be specified by the analytical laboratory.
4. In addition to the required preservation for each sample container, sufficient ice should be placed with the sample containers in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when samples arrive, measurement of the temperature of samples immediately upon receipt is necessary to confirm that the 4° C temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible following collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid, without the use of qualifiers.

wsp

Table 5. Parameter and Analysis Summary - Appendix III Detection Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit	Container [3]	Preservation [4]	Max. Holding Time from Sampling [5]
Field Parameters					
pH	EPA 9040C	0.1 units	–	–	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	–	–	Immediately or within 15 minutes
Temperature*	SM 2550 B	–	–	–	Immediately or within 15 minutes
Turbidity*	SM 2130 B	–	–	–	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	–	–	–	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	–	–	–	Immediately or within 15 minutes
General Chemistry					
Chloride	SM 4500 Cl E/11	1.0 mg/L	Plastic	4° ± 2°C	28 days
Fluoride	SM 4500 F E/11	TBD		4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Sulfate	ASTM D516-16	5.0 mg/L		4° ± 2°C	28 days
Total Dissolved Solids	USGS I-1750-85	5.0 mg/L		4° ± 2°C	7 days
Metals (total and dissolved)					
Boron	EPA 6010	0.1	Plastic	HNO_3 to pH<2	6 months
Calcium		1.0			

Notes:
1. Boron, calcium, chloride, fluoride, sulfate, and total dissolved solids are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent methods.
3. Containers and volumes will be specified by the lab.
4. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix III Detection Monitoring list and are collected for informational purposes only.

General Chemistry					
Fluoride	SM 4500 F E/11	TBD	Plastic	4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Metals (total and dissolved)					
Antimony	EPA 6010 / 6020 as applicable	0.001 mg/L	Plastic	HNO_3 to pH<2	6 months
Arsenic		0.002			
Barium		0.002			
Beryllium		0.0005			
Cadmium		0.0005			
Chromium		0.002			
Cobalt		0.002			
Lead		0.0005			
Lithium		0.02			
Molybdenum		0.002			
Selenium		0.002			
Thallium		0.0005			
Mercury	EPA 245.1	0.0002	Plastic	HNO_3 to pH<2	28 days
Radium-226 and 228 combined	EPA 9315 and EPA 9320	1.0 and 2.0 pCi/L	Plastic	HNO_3	6 months

Notes:
1. Fluoride and all metals are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent method.
3. Listed reporting limits are the maximum allowable reporting limits.
4. Containers and volumes will be specified by the lab.
5. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
6. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix IV Assessment Monitoring list and are collected for informational purposes only.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Sampling Personal:	Ethan Gress

Weather Conditions: Temp: 60 °F Wind: NW @ 5-10 Precip: Sunny / Partly Cloudy / Cloudy

WELL INFORMATION

Well Locked?	YES	NO
Well Labeled?	YES	NO
Repairs Necessary?		
Casing Diameter:	2"	
Water Level Before Purge:	30.85	ft
Depth to Top of Pump:	—	ft
Water Level After Sample:	33.30	ft
Measurement Method:	Electric Water Level Indicator	

SAMPLING INFORMATION

Purging Method:	Bladder	
Sampling Method:	Bladder	
Dedicated Equipment?	YES	NO

Control Settings:	
Purge: 3	Sec.
Recover: 57	Sec.
PSI: —	

Bottle List:	
1 Liter Raw	1 Gal Nitric
500mL Nitric	
500mL Nitric (filtered)	

Duplicate Sample?
YES / NO

The analyses presented in this report were performed by Energy Laboratories, Inc., 2393 Salt Creek Hwy, Casper, WY 82601-9601, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

Energy Laboratories, Inc. verifies the reported results for the analysis has been technically reviewed and approved for release.

If you have any questions regarding these test results, please contact your Project Manager.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Container/Temp Blank temperature:	24.1°C No Ice		
Containers requiring zero headspace have no headspace or bubble that is <6mm (1/4").	Yes ☐	No ☐	No VOA vials submitted ☑
Water - pH acceptable upon receipt?	Yes ☑	No ☐	Not Applicable ☐

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

Trip Blanks and/or Blind Duplicate samples are assigned the earliest collection time for the associated requested analysis in order to evaluate the holding time unless specifically indicated.

Contact and Corrective Action Comments:

The temperature of the sample(s) in shipping container 1 was 23.2°C, shipping container 2 was 24.1°C, shipping container 3 was 23.7°C, shipping container 4 was 24.0°C. SLR 06/30/25

Table 7: Additional List Parameter and Analysis Summary

Parameter [1]	Method Reference [2]	Reporting Limit	Preparation Method Reference [2]	Sample Container [3]	Required Preservation [4]	Maximum Holding Time from Sampling [5]
General Chemistry						
Total Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Bicarbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Carbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Metals (Total and Dissolved)						
Iron	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Magnesium	EPA 6010D	0.2 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Potassium	EPA 6010D	3.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Sodium	EPA 6010D	1.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Aluminum	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Manganese	EPA 6010D	0.05 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months

Notes:

1. All listed parameters are tested in the laboratory. Listed parameters are to be collected in conjunction with other CCR parameter lists (Table 2 and Table 3).

2. Or equivalent method.
3. Containers and volumes will be specified by the analytical laboratory.
4. In addition to the required preservation for each sample container, sufficient ice should be placed with the sample containers in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when samples arrive, measurement of the temperature of samples immediately upon receipt is necessary to confirm that the 4° C temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible following collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid, without the use of qualifiers.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Table 5. Parameter and Analysis Summary - Appendix III Detection Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit	Container [3]	Preservation [4]	Max. Holding Time from Sampling [5]
Field Parameters					
pH	EPA 9040C	0.1 units	–	–	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	–	–	Immediately or within 15 minutes
Temperature*	SM 2550 B	–	–	–	Immediately or within 15 minutes
Turbidity*	SM 2130 B	–	–	–	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	–	–	–	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	–	–	–	Immediately or within 15 minutes
General Chemistry					
Chloride	SM 4500 Cl E/11	1.0 mg/L	Plastic	4° ± 2°C	28 days
Fluoride	SM 4500 F E/11	TBD		4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Sulfate	ASTM D516-16	5.0 mg/L		4° ± 2°C	28 days
Total Dissolved Solids	USGS I-1750-85	5.0 mg/L		4° ± 2°C	7 days
Metals (total and dissolved)					
Boron	EPA 6010	0.1	Plastic	HNO_3 to pH<2	6 months
Calcium		1.0			

Notes:
1. Boron, calcium, chloride, fluoride, sulfate, and total dissolved solids are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent methods.
3. Containers and volumes will be specified by the lab.
4. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix III Detection Monitoring list and are collected for informational purposes only.

Table 6. Parameter and Analysis Summary - Appendix IV Assessment Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit [3]	Container [4]	Preservation [5]	Max. Holding Time from Sampling [6]
Field Parameters					
pH	EPA 9040C	0.1 units	–	–	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	–	–	Immediately or within 15 minutes
Temperature*	SM 2550 B	–	–	–	Immediately or within 15 minutes
Turbidity*	SM 2130 B	–	–	–	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	–	–	–	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	–	–	–	Immediately or within 15 minutes
General Chemistry					
Fluoride	SM 4500 F E/11	TBD	Plastic	4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Metals (total and dissolved)					
Antimony	EPA 6010 / 6020 as applicable	0.001 mg/L	Plastic	HNO_3 to pH<2	6 months
Arsenic		0.002			
Barium		0.002			
Beryllium		0.0005			
Cadmium		0.0005			
Chromium		0.002			
Cobalt		0.002			
Lead		0.0005			
Lithium		0.02			
Molybdenum		0.002			
Selenium		0.002			
Thallium		0.0005			
Mercury	EPA 245.1	0.0002	Plastic	HNO_3 to pH<2	28 days
Radium-226 and 228 combined	EPA 9315 and EPA 9320	1.0 and 2.0 pCi/L	Plastic	HNO_3	6 months

Notes:
1. Fluoride and all metals are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent method.
3. Listed reporting limits are the maximum allowable reporting limits.
4. Containers and volumes will be specified by the lab.
5. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
6. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.
* Additional parameters that are not part of the Appendix IV Assessment Monitoring list and are collected for informational purposes only.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Field Datasheet

Groundwater Assessment

Company:	GRE Stanton Station
Event:	June 2025
Sample ID:	222
Sampling Personal:	Ethan Gress

Weather Conditions: Temp: 60 °F Wind: NW @ 5-10 Precip: Sunny / Partly Cloudy / Cloudy

WELL INFORMATION

Well Locked?	YES	NO
Well Labeled?	YES	NO
Repairs Necessary?		
Casing Diameter:	2"	
Water Level Before Purge:	30.85	ft
Depth to Top of Pump:	—	ft
Water Level After Sample:	33.30	ft
Measurement Method:	Electric Water Level Indicator	

SAMPLING INFORMATION

Purging Method:	Bladder	
Sampling Method:	Bladder	
Dedicated Equipment?	YES	NO

Control Settings:	
Purge: 3	Sec.
Recover: 57	Sec.
PSI: —	

Bottle List:	
1 Liter Raw	1 Gal Nitric
500mL Nitric	
500mL Nitric (filtered)	

Duplicate Sample?
YES / NO
Duplicate Sample ID:
—

Workorder Comments

All analytes with dilution factors greater than 1 (displayed in DF column) required dilution due to matrix or high concentration of target analyte unless otherwise noted and reporting limits (RDL column) have been adjusted accordingly.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

ANALYTICAL SUMMARY REPORT

July 29, 2025

Minnesota Valley Testing Laboratories
1126 N Front St
New Ulm, MN 56073-1176

Work Order: C25060963 Quote ID: C15480
Project Name: 90608

Energy Laboratories, Inc. Casper WY received the following 4 samples for Minnesota Valley Testing Laboratories on 6/27/2025 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
C25060963-001	90608001, MW-300	06/24/25 18:50	06/27/25	Groundwater	Radium 226 + Radium 228, Total Radium 226, Total Radium 228, Total
C25060963-002	90608002, MW-301	06/24/25 16:53	06/27/25	Groundwater	Same As Above
C25060963-003	90608003, DUP 2023	06/24/25 16:53	06/27/25	Groundwater	Same As Above
C25060963-004	90608004, MW-PB3	06/24/25 15:22	06/27/25	Groundwater	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 2393 Salt Creek Hwy, Casper, WY 82601-9601, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

Energy Laboratories, Inc. verifies the reported results for the analysis has been technically reviewed and approved for release.

If you have any questions regarding these test results, please contact your Project Manager.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.
