Water - pH acceptable upon receipt?	Yes ☑	No ☐	Not Applicable ☐

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

Trip Blanks and/or Blind Duplicate samples are assigned the earliest collection time for the associated requested analysis in order to evaluate the holding time unless specifically indicated.

Contact and Corrective Action Comments:

The temperature blank temperature in shipping container 1 was 21.7°C, shipping container 2 was 22.2°C, shipping container 3 was 21.9°C, shipping container 4 was 22.0°C, shipping container 5 was 22.0°C. shipping container 6 was

Field Datasheet

Groundwater Assessment

Company:	GRE Stanton Station
Event:	Sept 2025
Sample ID:	BB
Sampling Personal:	

Weather Conditions: Temp: 75 °F Wind: N @ 5-10 Precip: Sunny / Partly Cloudy / Cloudy

WELL INFORMATION

Well Locked?	YES	NO
Well Labeled?	YES	NO
Repairs Necessary?		
Casing Diameter:	2"	
Water Level Before Purge:	43.64	ft
Depth to Top of Pump:	—	ft
Water Level After Sample:	43.90	ft
Measurement Method:	Electric Water Level Indicator	

SAMPLING INFORMATION

Purging Method:	Bladder	1"
Sampling Method:	Bladder	1"
Dedicated Equipment?	YES	NO

Control Settings:
Purge: 6 Sec.
Recover: 9 Sec.
PSI: —

Bottle List:
1 Liter Raw ~~1 Gal Nitric~~
~~500mL Nitric~~
~~500mL Nitric (filtered)~~ TDS on 4

Duplicate Sample? YES / NO
Duplicate Sample ID:

Sample Comments

Dissolved metals results are higher than total metals results for several metals. It was determined that the dissolved metals bottle varies significantly in color from the remainder of bottles for MW-227 which may indicate that the well changed as sampling occured. Client was contacted prior to release of results. CC 29Oct25

Total Dissolved Solids	**1990**	mg/L	10	1		10/02/2025 13:42	

Sample Comments

Total and dissolved results have been rechecked, resulting in minimal change. CC 29Oct25

Analysis Results Comments

Alkalinity, Total

Matrix spike and/or matrix spike duplicate recovery was low; the associated laboratory control sample recovery was acceptable.

pH

Sample analyzed beyond holding time.

Total # of Sample Locations			2	40	53	15	53

Notes:
Suggested locations for collection of QA/QC samples in 2025 are listed in Table 2.
App III - Appendix III Detection Monitoring List, Table 5
App IV - Appendix IV Assessment Monitoring List, Table 6
Additional List - Table 7
Required field parameters are listed in Table 5 and Table 6
1. The piezometers do not have dedicated pumps and will need to be sampled by other methods.
2. The sump should be sampled using surface water collection methods via the sump riser.
3. Surface water samples to be collected only if safely accessible and free water is present.

WSP DRAFT - SUBJECT TO CHANGE

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

February 2025 GL21509219.000

Table 5. Parameter and Analysis Summary - Appendix III Detection Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit	Container [3]	Preservation [4]	Max. Holding Time from Sampling [5]
Field Parameters					
pH	EPA 9040C	0.1 units	–	–	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	–	–	Immediately or within 15 minutes
Temperature*	SM 2550 B	–	–	–	Immediately or within 15 minutes
Turbidity*	SM 2130 B	–	–	–	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	–	–	–	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	–	–	–	Immediately or within 15 minutes
General Chemistry					
Chloride	SM 4500 Cl E/11	1.0 mg/L	Plastic	4° ± 2°C	28 days
Fluoride	SM 4500 F E/11	TBD		4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Sulfate	ASTM D516-16	5.0 mg/L		4° ± 2°C	28 days
Total Dissolved Solids	USGS I-1750-85	5.0 mg/L		4° ± 2°C	7 days
Metals (total and dissolved)					
Boron	EPA 6010	0.1	Plastic	HNO_3 to pH<2	6 months
Calcium		1.0			

Notes:
1. Boron, calcium, chloride, fluoride, sulfate, and total dissolved solids are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent methods.
3. Containers and volumes will be specified by the lab.
4. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix III Detection Monitoring list and are collected for informational purposes only.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Antimony	EPA 6010 / 6020 as applicable	0.001 mg/L	Plastic	HNO_3 to pH<2	6 months
Arsenic		0.002			
Barium		0.002			
Beryllium		0.0005			
Cadmium		0.0005			
Chromium		0.002			
Cobalt		0.002			
Lead		0.0005			
Lithium		0.02			
Molybdenum		0.002			
Selenium		0.002			
Thallium		0.0005			
Mercury	EPA 245.1	0.0002	Plastic	HNO_3 to pH<2	28 days
Radium-226 and 228 combined	EPA 9315 and EPA 9320	1.0 and 2.0 pCi/L	Plastic	HNO_3	6 months

Notes:
1. Fluoride and all metals are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent method.
3. Listed reporting limits are the maximum allowable reporting limits.
4. Containers and volumes will be specified by the lab.
5. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
6. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.
* Additional parameters that are not part of the Appendix IV Assessment Monitoring list and are collected for informational purposes only.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Table 7: Additional List Parameter and Analysis Summary

Parameter [1]	Method Reference [2]	Reporting Limit	Preparation Method Reference [2]	Sample Container [3]	Required Preservation [4]	Maximum Holding Time from Sampling [5]
General Chemistry						
Total Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Bicarbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Carbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Metals (Total and Dissolved)						
Iron	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Magnesium	EPA 6010D	0.2 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Potassium	EPA 6010D	3.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Sodium	EPA 6010D	1.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Aluminum	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Manganese	EPA 6010D	0.05 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months

Notes:

1. All listed parameters are tested in the laboratory. Listed parameters are to be collected in conjunction with other CCR parameter lists (Table 2 and Table 3).

2. Or equivalent method.
3. Containers and volumes will be specified by the analytical laboratory.
4. In addition to the required preservation for each sample container, sufficient ice should be placed with the sample containers in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when samples arrive, measurement of the temperature of samples immediately upon receipt is necessary to confirm that the 4° C temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible following collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid, without the use of qualifiers.

Field Datasheet

Groundwater Assessment

Company:	GRE Stanton Station
Event:	Sept 2025
Sample ID:	MW-206
Sampling Personal:	EKL, CRK

Weather Conditions: Temp: °F Wind: @ Precip: Sunny / Partly Cloudy / Cloudy

WELL INFORMATION

Well Locked?	YES (NO)
Well Labeled?	YES (NO)
Repairs Necessary?	
Casing Diameter:	2"
Water Level Before Purge:	7.48 ft
Total Depth	13.48
Depth to Top of Pump:	9.50 ft
Water Level After Sample:	ft
Measurement Method:	Electric Water Level Indicator

SAMPLING INFORMATION

Purging Method:	Bladder
Sampling Method:	Bladder
Dedicated Equipment?	(YES) NO

Control Settings:	
Purge: 2	Sec.
Recover: 58	Sec.
PSI:	

Bottle List:	
1 Liter Raw	1 Gal Nitric
500mL Nitric	
500mL Nitric (filtered)	

Duplicate Sample?
YES / (NO)
Duplicate Sample ID:
—

ANALYTICAL SUMMARY REPORT

October 23, 2025

Minnesota Valley Testing Laboratories
1126 N Front St
New Ulm, MN 56073-1176

Work Order: C25100134 Quote ID: C15480
Project Name: 102376

Energy Laboratories, Inc. Casper WY received the following 10 samples for Minnesota Valley Testing Laboratories on 10/3/2025 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
C25100134-001	102376001, MW-223	09/30/25 9:51	10/03/25	Aqueous	pH Check for Nitric Radiochem FIRST Radium 226 + Radium 228, Total Radium 226, Total Radium 228, Total

The analyses presented in this report were performed by Energy Laboratories, Inc., 2393 Salt Creek Hwy, Casper, WY 82601-9601, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

Energy Laboratories, Inc. verifies the reported results for the analysis has been technically reviewed and approved for release.

If you have any questions regarding these test results, please contact your Project Manager.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Containers requiring zero headspace have no headspace or bubble that is <6mm (1/4").	Yes ☐	No ☐	No VOA vials submitted ☑
Water - pH acceptable upon receipt?	Yes ☐	No ☑	Not Applicable ☐

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

Trip Blanks and/or Blind Duplicate samples are assigned the earliest collection time for the associated requested analysis in order to evaluate the holding time unless specifically indicated.

Contact and Corrective Action Comments:

The temperature blank temperature in shipping container 1 was 19.0°C, shipping container 2 was 18.6°C, shipping container 3 was 21.4°C and shipping container 4 was 18.9°C

ANALYTICAL SUMMARY REPORT

October 23, 2025

Minnesota Valley Testing Laboratories
1126 N Front St
New Ulm, MN 56073-1176

Work Order: C25100135 Quote ID: C15480
Project Name: 102376

Energy Laboratories, Inc. Casper WY received the following 3 samples for Minnesota Valley Testing Laboratories on 10/3/2025 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
C25100135-001	102376011, MW-302	09/29/25 10:03	10/03/25	Aqueous	Radium 226 + Radium 228, Total Radium 226, Total Radium 228, Total
C25100135-002	102376012, DUP-2025-2	09/29/25 11:17	10/03/25	Aqueous	Same As Above
C25100135-003	102376013, FB-2025	09/30/25 11:08	10/03/25	Aqueous	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 2393 Salt Creek Hwy, Casper, WY 82601-9601, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

Energy Laboratories, Inc. verifies the reported results for the analysis has been technically reviewed and approved for release.

If you have any questions regarding these test results, please contact your Project Manager.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. Container/Temp Blank temperature:	21.4°C No Ice		
Containers requiring zero headspace have no headspace or bubble that is <6mm (1/4").	Yes ☐	No ☐	No VOA vials submitted ☑
Water - pH acceptable upon receipt?	Yes ☑	No ☐	Not Applicable ☐

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

Trip Blanks and/or Blind Duplicate samples are assigned the earliest collection time for the associated requested analysis in order to evaluate the holding time unless specifically indicated.

Contact and Corrective Action Comments:

The temperature blank temperature in shipping container 1 was 19.0°C, shipping container 2 was 18.6°C, shipping container 3 was 21.4°C and shipping container 4 was 18.9°C. LDS 10/03/25

Table 5. Parameter and Analysis Summary - Appendix III Detection Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit	Container [3]	Preservation [4]	Max. Holding Time from Sampling [5]
Field Parameters					
pH	EPA 9040C	0.1 units	--	--	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	--	--	Immediately or within 15 minutes
Temperature*	SM 2550 B	--	--	--	Immediately or within 15 minutes
Turbidity*	SM 2130 B	--	--	--	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	--	--	--	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	--	--	--	Immediately or within 15 minutes
General Chemistry					
Chloride	SM 4500 Cl E/11	1.0 mg/L	Plastic	4° ± 2°C	28 days
Fluoride	SM 4500 F E/11	TBD		4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Sulfate	ASTM D516-16	5.0 mg/L		4° ± 2°C	28 days
Total Dissolved Solids	USGS I-1750-85	5.0 mg/L		4° ± 2°C	7 days
Metals (total and dissolved)					
Boron	EPA 6010	0.1	Plastic	HNO_3 to pH<2	6 months
Calcium		1.0			

Notes:
1. Boron, calcium, chloride, fluoride, sulfate, and total dissolved solids are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent methods.
3. Containers and volumes will be specified by the lab.
4. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix III Detection Monitoring list and are collected for informational purposes only.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. Mercury	EPA 245.1	0.0002	Plastic	HNO_3 to pH<2	28 days
Radium-226 and 228 combined	EPA 9315 and EPA 9320	1.0 and 2.0 pCi/L	Plastic	HNO_3	6 months

Notes:
1. Fluoride and all metals are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent method.
3. Listed reporting limits are the maximum allowable reporting limits.
4. Containers and volumes will be specified by the lab.
5. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
6. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

Table 7: Additional List Parameter and Analysis Summary

Parameter [1]	Method Reference [2]	Reporting Limit	Preparation Method Reference [2]	Sample Container [3]	Required Preservation [4]	Maximum Holding Time from Sampling [5]
General Chemistry						
Total Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Bicarbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Carbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Metals (Total and Dissolved)						
Iron	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Magnesium	EPA 6010D	0.2 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Potassium	EPA 6010D	3.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Sodium	EPA 6010D	1.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Aluminum	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Manganese	EPA 6010D	0.05 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months

Notes:

1. All listed parameters are tested in the laboratory. Listed parameters are to be collected in conjunction with other CCR parameter lists (Table 2 and Table 3).

2. Or equivalent method.
3. Containers and volumes will be specified by the analytical laboratory.
4. In addition to the required preservation for each sample container, sufficient ice should be placed with the sample containers in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when samples arrive, measurement of the temperature of samples immediately upon receipt is necessary to confirm that the 4° C temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible following collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid, without the use of qualifiers.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. ANALYTICAL SUMMARY REPORT

December 18, 2025

Minnesota Valley Testing Laboratories
1126 N Front St
New Ulm, MN 56073-1176

Work Order: C25110736 Quote ID: C15480
Project Name: 108174

Energy Laboratories, Inc. Casper WY received the following 5 samples for Minnesota Valley Testing Laboratories on 11/25/2025 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
C25110736-001	108174001, MW-6B	11/19/25 7:40	11/25/25	Groundwater	Radium 226 + Radium 228, Total Radium 226, Total Radium 228, Total
C25110736-002	108174002, MW-7A	11/19/25 12:45	11/25/25	Groundwater	Same As Above
C25110736-003	108174003, MW-7B	11/19/25 11:25	11/25/25	Groundwater	Same As Above
C25110736-004	108174004, MW-8B	11/19/25 8:55	11/25/25	Groundwater	Same As Above
C25110736-005	108174005, MW-105	11/19/25 10:22	11/25/25	Groundwater	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 2393 Salt Creek Hwy, Casper, WY 82601-9601, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

Energy Laboratories, Inc. verifies the reported results for the analysis has been technically reviewed and approved for release.

If you have any questions regarding these test results, please contact your Project Manager.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Container/Temp Blank temperature:	7.4°C No Ice		
Containers requiring zero headspace have no headspace or bubble that is <6mm (1/4").	Yes ☐	No ☐	No VOA vials submitted ☑
Water - pH acceptable upon receipt?	Yes ☑	No ☐	Not Applicable ☐

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

Trip Blanks and/or Blind Duplicate samples are assigned the earliest collection time for the associated requested analysis in order to evaluate the holding time unless specifically indicated.

Contact and Corrective Action Comments:

The temperature blank temperature in shipping container 1 was 0.2°C. The temperature blank temperature in shipping container 2 was 7.1°C, shipping container 3 was 6.9°C, shipping container 4 was 7.4°C, shipping container 5 was 7.1°C

Table 5. Parameter and Analysis Summary - Appendix III Detection Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit	Container [3]	Preservation [4]	Max. Holding Time from Sampling [5]
Field Parameters					
pH	EPA 9040C	0.1 units	--	--	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	--	--	Immediately or within 15 minutes
Temperature*	SM 2550 B	--	--	--	Immediately or within 15 minutes
Turbidity*	SM 2130 B	--	--	--	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	--	--	--	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	--	--	--	Immediately or within 15 minutes
General Chemistry					
Chloride	SM 4500 Cl E/11	1.0 mg/L	Plastic	4° ± 2°C	28 days
Fluoride	SM 4500 F E/11	TBD		4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Sulfate	ASTM D516-16	5.0 mg/L		4° ± 2°C	28 days
Total Dissolved Solids	USGS I-1750-85	5.0 mg/L		4° ± 2°C	7 days
Metals (total and dissolved)					
Boron	EPA 6010	0.1	Plastic	HNO_3 to pH<2	6 months
Calcium		1.0			

Notes:
1. Boron, calcium, chloride, fluoride, sulfate, and total dissolved solids are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent methods.
3. Containers and volumes will be specified by the lab.
4. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix III Detection Monitoring list and are collected for informational purposes only.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. Table 6. Parameter and Analysis Summary - Appendix IV Assessment Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit [3]	Container [4]	Preservation [5]	Max. Holding Time from Sampling [6]
Field Parameters					
pH	EPA 9040C	0.1 units	--	--	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	--	--	Immediately or within 15 minutes
Temperature*	SM 2550 B	--	--	--	Immediately or within 15 minutes
Turbidity*	SM 2130 B	--	--	--	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	--	--	--	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	--	--	--	Immediately or within 15 minutes
General Chemistry					
Fluoride	SM 4500 F E/11	TBD	Plastic	4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Metals (total and dissolved)					
Antimony	EPA 6010 / 6020 as applicable	0.001 mg/L	Plastic	HNO_3 to pH<2	6 months
Arsenic		0.002			
Barium		0.002			
Beryllium		0.0005			
Cadmium		0.0005			
Chromium		0.002			
Cobalt		0.002			
Lead		0.0005			
Lithium		0.02			
Molybdenum		0.002			
Selenium		0.002			
Thallium		0.0005			
Mercury	EPA 245.1	0.0002	Plastic	HNO_3 to pH<2	28 days
Radium-226 and 228 combined	EPA 9315 and EPA 9320	1.0 and 2.0 pCi/L	Plastic	HNO_3	6 months

Notes:
1. Fluoride and all metals are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent method.
3. Listed reporting limits are the maximum allowable reporting limits.
4. Containers and volumes will be specified by the lab.
5. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
6. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

Table 7: Additional List Parameter and Analysis Summary

Parameter [1]	Method Reference [2]	Reporting Limit	Preparation Method Reference [2]	Sample Container [3]	Required Preservation [4]	Maximum Holding Time from Sampling [5]
General Chemistry						
Total Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Bicarbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Carbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Metals (Total and Dissolved)						
Iron	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Magnesium	EPA 6010D	0.2 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Potassium	EPA 6010D	3.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Sodium	EPA 6010D	1.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Aluminum	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Manganese	EPA 6010D	0.05 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months

Notes:

1. All listed parameters are tested in the laboratory. Listed parameters are to be collected in conjunction with other CCR parameter lists (Table 2 and Table 3).

2. Or equivalent method.
3. Containers and volumes will be specified by the analytical laboratory.
4. In addition to the required preservation for each sample container, sufficient ice should be placed with the sample containers in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when samples arrive, measurement of the temperature of samples immediately upon receipt is necessary to confirm that the 4° C temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible following collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid, without the use of qualifiers.

ANALYTICAL SUMMARY REPORT

December 29, 2025

Minnesota Valley Testing Laboratories
1126 N Front St
New Ulm, MN 56073-1176

Work Order: C25110733 Quote ID: C15480
Project Name: 108250

Energy Laboratories, Inc. Casper WY received the following 4 samples for Minnesota Valley Testing Laboratories on 11/25/2025 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
C25110733-001	10825001, MW-9N	11/20/25 08:56	11/25/25	Groundwater	Radium 226 + Radium 228, Total Radium 226, Total Radium 228, Total
C25110733-002	108250002, DUP BAL	11/20/25 08:56	11/25/25	Groundwater	Same As Above
C25110733-003	108250003, MW-102	11/20/25 08:00	11/25/25	Groundwater	Same As Above
C25110733-004	108250004, MW-103	11/20/25 10:10	11/25/25	Groundwater	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 2393 Salt Creek Hwy, Casper, WY 82601-9601, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

Energy Laboratories, Inc. verifies the reported results for the analysis has been technically reviewed and approved for release.

If you have any questions regarding these test results, please contact your Project Manager.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Custody seals intact on all sample bottles?	Yes ☐	No ☐	Not Present ☑
Chain of custody present?	Yes ☑	No ☐	
Chain of custody signed when relinquished and received?	Yes ☑	No ☐	
Chain of custody agrees with sample labels?	Yes ☑	No ☐	
Samples in proper container/bottle?	Yes ☑	No ☐	
Sample containers intact?	Yes ☑	No ☐	
Sufficient sample volume for indicated test?	Yes ☑	No ☐	
All samples received within holding time? (Exclude analyses that are considered field parameters such as pH, DO, Res Cl, Sulfite, Ferrous Iron, etc.)	Yes ☑	No ☐	
Temp Blank received in all shipping container(s)/cooler(s)?	Yes ☐	No ☑	Not Applicable ☐
Container/Temp Blank temperature:	7.4°C No Ice		
Containers requiring zero headspace have no headspace or bubble that is <6mm (1/4").	Yes ☐	No ☐	No VOA vials submitted ☑
Water - pH acceptable upon receipt?	Yes ☑	No ☐	Not Applicable ☐

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

Trip Blanks and/or Blind Duplicate samples are assigned the earliest collection time for the associated requested analysis in order to evaluate the holding time unless specifically indicated.

Contact and Corrective Action Comments:

The temperature blank temperature in shipping container 1 was 0.2°C. The temperature blank temperature in shipping container 2 was 7.1°C, shipping container 3 was 6.9°C, shipping container 4 was 7.4°C, shipping container 5 was 7.1°C

Field Datasheet

Groundwater Assessment

Company:	GRE Stanton Station
Event:	Nov 2025
Sample ID:	103
Sampling Personal:	

Weather Conditions: Temp: 35 °F Wind: W @ 5-10 Precip: Sunny / Partly Cloudy / Cloudy

WELL INFORMATION

Well Locked?	YES	NO
Well Labeled?	YES	NO
Repairs Necessary?		
Casing Diameter:	2"	
Water Level Before Purge:	19.78	ft
Depth to Top of Pump:	—	ft
Water Level After Sample:	20.02	ft
Measurement Method:	Electric Water Level Indicator	

SAMPLING INFORMATION

Purging Method:	Bladder	
Sampling Method:	Bladder	
Dedicated Equipment?	YES	NO

Control Settings:		
Purge:	3	Sec.
Recover:	27	Sec.
PSI:	—	

Bottle List:	
1 Liter Raw	1 Gal Nitric
500mL Nitric	
500mL Nitric (filtered)	

Duplicate Sample?
YES / NO
Duplicate Sample ID:
—

Workorder Comments

All analytes with dilution factors greater than 1 (displayed in DF column) required dilution due to matrix or high concentration of target analyte unless otherwise noted and reporting limits (RDL column) have been adjusted accordingly.

Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	--	--	Immediately or within 15 minutes
Temperature*	SM 2550 B	--	--	--	Immediately or within 15 minutes
Turbidity*	SM 2130 B	--	--	--	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	--	--	--	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	--	--	--	Immediately or within 15 minutes
General Chemistry					
Chloride	SM 4500 Cl E/11	1.0 mg/L	Plastic	4° ± 2°C	28 days
Fluoride	SM 4500 F E/11	TBD		4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Sulfate	ASTM D516-16	5.0 mg/L		4° ± 2°C	28 days
Total Dissolved Solids	USGS I-1750-85	5.0 mg/L		4° ± 2°C	7 days
Metals (total and dissolved)					
Boron	EPA 6010	0.1	Plastic	HNO_3 to pH<2	6 months
Calcium		1.0			

Notes:
1. Boron, calcium, chloride, fluoride, sulfate, and total dissolved solids are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent methods.
3. Containers and volumes will be specified by the lab.
4. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix III Detection Monitoring list and are collected for informational purposes only.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Table 6. Parameter and Analysis Summary - Appendix IV Assessment Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit [3]	Container [4]	Preservation [5]	Max. Holding Time from Sampling [6]
Field Parameters					
pH	EPA 9040C	0.1 units	--	--	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	--	--	Immediately or within 15 minutes
Temperature*	SM 2550 B	--	--	--	Immediately or within 15 minutes
Turbidity*	SM 2130 B	--	--	--	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	--	--	--	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	--	--	--	Immediately or within 15 minutes
General Chemistry					
Fluoride	SM 4500 F E/11	TBD	Plastic	4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Metals (total and dissolved)					
Antimony	EPA 6010 / 6020 as applicable	0.001 mg/L	Plastic	HNO_3 to pH<2	6 months
Arsenic		0.002			
Barium		0.002			
Beryllium		0.0005			
Cadmium		0.0005			
Chromium		0.002			
Cobalt		0.002			
Lead		0.0005			
Lithium		0.02			
Molybdenum		0.002			
Selenium		0.002			
Thallium		0.0005			
Mercury	EPA 245.1	0.0002	Plastic	HNO_3 to pH<2	28 days
Radium-226 and 228 combined	EPA 9315 and EPA 9320	1.0 and 2.0 pCi/L	Plastic	HNO_3	6 months

Notes:
1. Fluoride and all metals are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent method.
3. Listed reporting limits are the maximum allowable reporting limits.
4. Containers and volumes will be specified by the lab.
5. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
6. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix IV Assessment Monitoring list and are collected for informational purposes only.

Table 7: Additional List Parameter and Analysis Summary

Parameter [1]	Method Reference [2]	Reporting Limit	Preparation Method Reference [2]	Sample Container [3]	Required Preservation [4]	Maximum Holding Time from Sampling [5]
General Chemistry						
Total Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Bicarbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Carbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Metals (Total and Dissolved)						
Iron	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Magnesium	EPA 6010D	0.2 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Potassium	EPA 6010D	3.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Sodium	EPA 6010D	1.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Aluminum	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Manganese	EPA 6010D	0.05 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months

Notes:

1. All listed parameters are tested in the laboratory. Listed parameters are to be collected in conjunction with other CCR parameter lists (Table 2 and Table 3).

2. Or equivalent method.
3. Containers and volumes will be specified by the analytical laboratory.
4. In addition to the required preservation for each sample container, sufficient ice should be placed with the sample containers in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when samples arrive, measurement of the temperature of samples immediately upon receipt is necessary to confirm that the 4° C temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible following collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid, without the use of qualifiers.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. ANALYTICAL SUMMARY REPORT

January 05, 2026

Minnesota Valley Testing Laboratories
1126 N Front St
New Ulm, MN 56073-1176

Work Order: C25120125 Quote ID: C15480
Project Name: 108923

Energy Laboratories, Inc. Casper WY received the following 2 samples for Minnesota Valley Testing Laboratories on 12/3/2025 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
C25120125-001	108923001, MW-1R	12/01/25 09:30	12/03/25	Groundwater	Radium 226 + Radium 228, Total Radium 226, Total Radium 228, Total
C25120125-002	108923002, MW-104	12/01/25 10:30	12/03/25	Groundwater	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 2393 Salt Creek Hwy, Casper, WY 82601-9601, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

Energy Laboratories, Inc. verifies the reported results for the analysis has been technically reviewed and approved for release.

If you have any questions regarding these test results, please contact your Project Manager.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Container/Temp Blank temperature:	5.6°C No Ice		
Containers requiring zero headspace have no headspace or bubble that is <6mm (1/4").	Yes ☐	No ☐	No VOA vials submitted ☑
Water - pH acceptable upon receipt?	Yes ☑	No ☐	Not Applicable ☐

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

Trip Blanks and/or Blind Duplicate samples are assigned the earliest collection time for the associated requested analysis in order to evaluate the holding time unless specifically indicated.

Contact and Corrective Action Comments:

The temperature blank temperature in shipping container 1 was 2.7°C, shipping container 2 was 4.6°C, and shipping container 3 was 5.6°C. LXQ 12/03/25

Table 5. Parameter and Analysis Summary - Appendix III Detection Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit	Container [3]	Preservation [4]	Max. Holding Time from Sampling [5]
Field Parameters					
pH	EPA 9040C	0.1 units	--	--	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	--	--	Immediately or within 15 minutes
Temperature*	SM 2550 B	--	--	--	Immediately or within 15 minutes
Turbidity*	SM 2130 B	--	--	--	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	--	--	--	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	--	--	--	Immediately or within 15 minutes
General Chemistry					
Chloride	SM 4500 Cl E/11	1.0 mg/L	Plastic	4° ± 2°C	28 days
Fluoride	SM 4500 F E/11	TBD		4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Sulfate	ASTM D516-16	5.0 mg/L		4° ± 2°C	28 days
Total Dissolved Solids	USGS I-1750-85	5.0 mg/L		4° ± 2°C	7 days
Metals (total and dissolved)					
Boron	EPA 6010	0.1	Plastic	HNO_3 to pH<2	6 months
Calcium		1.0			

Notes:
1. Boron, calcium, chloride, fluoride, sulfate, and total dissolved solids are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent methods.
3. Containers and volumes will be specified by the lab.
4. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix III Detection Monitoring list and are collected for informational purposes only.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. Table 6. Parameter and Analysis Summary - Appendix IV Assessment Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit [3]	Container [4]	Preservation [5]	Max. Holding Time from Sampling [6]
Field Parameters					
pH	EPA 9040C	0.1 units	--	--	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	--	--	Immediately or within 15 minutes
Temperature*	SM 2550 B	--	--	--	Immediately or within 15 minutes
Turbidity*	SM 2130 B	--	--	--	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	--	--	--	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	--	--	--	Immediately or within 15 minutes
General Chemistry					
Fluoride	SM 4500 F E/11	TBD	Plastic	4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Metals (total and dissolved)					
Antimony	EPA 6010 / 6020 as applicable	0.001 mg/L	Plastic	HNO_3 to pH<2	6 months
Arsenic		0.002			
Barium		0.002			
Beryllium		0.0005			
Cadmium		0.0005			
Chromium		0.002			
Cobalt		0.002			
Lead		0.0005			
Lithium		0.02			
Molybdenum		0.002			
Selenium		0.002			
Thallium		0.0005			
Mercury	EPA 245.1	0.0002	Plastic	HNO_3 to pH<2	28 days
Radium-226 and 228 combined	EPA 9315 and EPA 9320	1.0 and 2.0 pCi/L	Plastic	HNO_3	6 months

Notes:
1. Fluoride and all metals are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent method.
3. Listed reporting limits are the maximum allowable reporting limits.
4. Containers and volumes will be specified by the lab.
5. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
6. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

Table 7: Additional List Parameter and Analysis Summary

Parameter [1]	Method Reference [2]	Reporting Limit	Preparation Method Reference [2]	Sample Container [3]	Required Preservation [4]	Maximum Holding Time from Sampling [5]
General Chemistry						
Total Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Bicarbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Carbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Metals (Total and Dissolved)						
Iron	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Magnesium	EPA 6010D	0.2 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Potassium	EPA 6010D	3.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Sodium	EPA 6010D	1.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Aluminum	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Manganese	EPA 6010D	0.05 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months

Notes:

1. All listed parameters are tested in the laboratory. Listed parameters are to be collected in conjunction with other CCR parameter lists (Table 2 and Table 3).

2. Or equivalent method.
3. Containers and volumes will be specified by the analytical laboratory.
4. In addition to the required preservation for each sample container, sufficient ice should be placed with the sample containers in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when samples arrive, measurement of the temperature of samples immediately upon receipt is necessary to confirm that the 4° C temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible following collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid, without the use of qualifiers.

ANALYTICAL SUMMARY REPORT

January 05, 2026

Minnesota Valley Testing Laboratories
1126 N Front St
New Ulm, MN 56073-1176

Work Order: C25120138 Quote ID: C15480
Project Name: 108927

Energy Laboratories, Inc. Casper WY received the following 3 samples for Minnesota Valley Testing Laboratories on 12/3/2025 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
C25120138-001	108927001, MW-201	12/01/25 10:00	12/03/25	Groundwater	Radium 226 + Radium 228, Total Radium 226, Total Radium 228, Total
C25120138-002	108927002, MW-202	12/01/25 11:15	12/03/25	Groundwater	Same As Above
C25120138-003	108927003, MW-203	12/01/25 12:23	12/03/25	Groundwater	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 2393 Salt Creek Hwy, Casper, WY 82601-9601, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

Energy Laboratories, Inc. verifies the reported results for the analysis has been technically reviewed and approved for release.

If you have any questions regarding these test results, please contact your Project Manager.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Container/Temp Blank temperature:	5.6°C No Ice		
Containers requiring zero headspace have no headspace or bubble that is <6mm (1/4").	Yes ☐	No ☐	No VOA vials submitted ☑
Water - pH acceptable upon receipt?	Yes ☑	No ☐	Not Applicable ☐

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

Trip Blanks and/or Blind Duplicate samples are assigned the earliest collection time for the associated requested analysis in order to evaluate the holding time unless specifically indicated.

Contact and Corrective Action Comments:

The temperature blank temperature in shipping container 1 was 2.7°C, shipping container 2 was 4.6°C, and shipping container 3 was 5.6°C. LXQ 12/03/25

Table 5. Parameter and Analysis Summary - Appendix III Detection Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit	Container [3]	Preservation [4]	Max. Holding Time from Sampling [5]
Field Parameters					
pH	EPA 9040C	0.1 units	--	--	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	--	--	Immediately or within 15 minutes
Temperature*	SM 2550 B	--	--	--	Immediately or within 15 minutes
Turbidity*	SM 2130 B	--	--	--	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	--	--	--	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	--	--	--	Immediately or within 15 minutes
General Chemistry					
Chloride	SM 4500 Cl E/11	1.0 mg/L	Plastic	4° ± 2°C	28 days
Fluoride	SM 4500 F E/11	TBD		4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Sulfate	ASTM D516-16	5.0 mg/L		4° ± 2°C	28 days
Total Dissolved Solids	USGS I-1750-85	5.0 mg/L		4° ± 2°C	7 days
Metals (total and dissolved)					
Boron	EPA 6010	0.1	Plastic	HNO_3 to pH<2	6 months
Calcium		1.0			

Notes:
1. Boron, calcium, chloride, fluoride, sulfate, and total dissolved solids are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent methods.
3. Containers and volumes will be specified by the lab.
4. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix III Detection Monitoring list and are collected for informational purposes only.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. Table 7: Additional List Parameter and Analysis Summary

Parameter [1]	Method Reference [2]	Reporting Limit	Preparation Method Reference [2]	Sample Container [3]	Required Preservation [4]	Maximum Holding Time from Sampling [5]
General Chemistry						
Total Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Bicarbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Carbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Metals (Total and Dissolved)						
Iron	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Magnesium	EPA 6010D	0.2 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Potassium	EPA 6010D	3.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Sodium	EPA 6010D	1.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Aluminum	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Manganese	EPA 6010D	0.05 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months

Notes:

1. All listed parameters are tested in the laboratory. Listed parameters are to be collected in conjunction with other CCR parameter lists (Table 2 and Table 3).

2. Or equivalent method.
3. Containers and volumes will be specified by the analytical laboratory.
4. In addition to the required preservation for each sample container, sufficient ice should be placed with the sample containers in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when samples arrive, measurement of the temperature of samples immediately upon receipt is necessary to confirm that the 4° C temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible following collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid, without the use of qualifiers.

ANALYTICAL SUMMARY REPORT

December 29, 2025

Minnesota Valley Testing Laboratories
1126 N Front St
New Ulm, MN 56073-1176

Work Order: C25110731 Quote ID: C15480
Project Name: 108249

Energy Laboratories, Inc. Casper WY received the following 7 samples for Minnesota Valley Testing Laboratories on 11/25/2025 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
C25110731-001	108249001, MW-210	11/20/25 12:33	11/25/25	Aqueous	Radium 226 + Radium 228, Total Radium 226, Total Radium 228, Total
C25110731-002	108249002, DUP-2022	11/20/25 12:33	11/25/25	Aqueous	Same As Above

C25110731-006	108249006, MW-214	11/20/25 14:56	11/25/25	Aqueous	Same As Above
C25110731-007	108249007, FB-2022	11/20/25 14:33	11/25/25	Aqueous	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 2393 Salt Creek Hwy, Casper, WY 82601-9601, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

Energy Laboratories, Inc. verifies the reported results for the analysis has been technically reviewed and approved for release.

If you have any questions regarding these test results, please contact your Project Manager.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Container/Temp Blank temperature:	7.4°C No Ice		
Containers requiring zero headspace have no headspace or bubble that is <6mm (1/4").	Yes ☐	No ☐	No VOA vials submitted ☑
Water - pH acceptable upon receipt?	Yes ☑	No ☐	Not Applicable ☐

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

Trip Blanks and/or Blind Duplicate samples are assigned the earliest collection time for the associated requested analysis in order to evaluate the holding time unless specifically indicated.

Contact and Corrective Action Comments:

The temperature blank temperature in shipping container 1 was 0.2°C. The temperature blank temperature in shipping container 2 was 7.1°C, shipping container 3 was 6.9°C, shipping container 4 was 7.4°C, shipping container 5 was 7.1°C

Table 5. Parameter and Analysis Summary - Appendix III Detection Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit	Container [3]	Preservation [4]	Max. Holding Time from Sampling [5]
Field Parameters					
pH	EPA 9040C	0.1 units	--	--	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	--	--	Immediately or within 15 minutes
Temperature*	SM 2550 B	--	--	--	Immediately or within 15 minutes
Turbidity*	SM 2130 B	--	--	--	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	--	--	--	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	--	--	--	Immediately or within 15 minutes
General Chemistry					
Chloride	SM 4500 Cl E/11	1.0 mg/L	Plastic	4° ± 2°C	28 days
Fluoride	SM 4500 F E/11	TBD		4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Sulfate	ASTM D516-16	5.0 mg/L		4° ± 2°C	28 days
Total Dissolved Solids	USGS I-1750-85	5.0 mg/L		4° ± 2°C	7 days
Metals (total and dissolved)					
Boron	EPA 6010	0.1	Plastic	HNO_3 to pH<2	6 months
Calcium		1.0			

Notes:
1. Boron, calcium, chloride, fluoride, sulfate, and total dissolved solids are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent methods.
3. Containers and volumes will be specified by the lab.
4. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix III Detection Monitoring list and are collected for informational purposes only.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. Table 6. Parameter and Analysis Summary - Appendix IV Assessment Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit [3]	Container [4]	Preservation [5]	Max. Holding Time from Sampling [6]
Field Parameters					
pH	EPA 9040C	0.1 units	--	--	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	--	--	Immediately or within 15 minutes
Temperature*	SM 2550 B	--	--	--	Immediately or within 15 minutes
Turbidity*	SM 2130 B	--	--	--	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	--	--	--	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	--	--	--	Immediately or within 15 minutes
General Chemistry					
Fluoride	SM 4500 F E/11	TBD	Plastic	4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Metals (total and dissolved)					
Antimony	EPA 6010 / 6020 as applicable	0.001 mg/L	Plastic	HNO_3 to pH<2	6 months
Arsenic		0.002			
Barium		0.002			
Beryllium		0.0005			
Cadmium		0.0005			
Chromium		0.002			
Cobalt		0.002			
Lead		0.0005			
Lithium		0.02			
Molybdenum		0.002			
Selenium		0.002			
Thallium		0.0005			
Mercury	EPA 245.1	0.0002	Plastic	HNO_3 to pH<2	28 days
Radium-226 and 228 combined	EPA 9315 and EPA 9320	1.0 and 2.0 pCi/L	Plastic	HNO_3	6 months

Notes:
1. Fluoride and all metals are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent method.
3. Listed reporting limits are the maximum allowable reporting limits.
4. Containers and volumes will be specified by the lab.
5. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
6. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.
* Additional parameters that are not part of the Appendix IV Assessment Monitoring list and are collected for informational purposes only.

Table 7: Additional List Parameter and Analysis Summary

Parameter [1]	Method Reference [2]	Reporting Limit	Preparation Method Reference [2]	Sample Container [3]	Required Preservation [4]	Maximum Holding Time from Sampling [5]
General Chemistry						
Total Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Bicarbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Carbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Metals (Total and Dissolved)						
Iron	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Magnesium	EPA 6010D	0.2 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Potassium	EPA 6010D	3.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Sodium	EPA 6010D	1.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Aluminum	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Manganese	EPA 6010D	0.05 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months

Notes:

1. All listed parameters are tested in the laboratory. Listed parameters are to be collected in conjunction with other CCR parameter lists (Table 2 and Table 3).

2. Or equivalent method.
3. Containers and volumes will be specified by the analytical laboratory.
4. In addition to the required preservation for each sample container, sufficient ice should be placed with the sample containers in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when samples arrive, measurement of the temperature of samples immediately upon receipt is necessary to confirm that the 4° C temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible following collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid, without the use of qualifiers.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

ANALYTICAL SUMMARY REPORT

December 30, 2025

Minnesota Valley Testing Laboratories
1126 N Front St
New Ulm, MN 56073-1176

Work Order: C25120010 Quote ID: C15480
Project Name: 108680

Energy Laboratories, Inc. Casper WY received the following 13 samples for Minnesota Valley Testing Laboratories on 12/1/2025 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
C25120010-001	108680001, MW-215	11/24/25 12:09	12/01/25	Groundwater	Radium 226 + Radium 228, Total Radium 226, Total Radium 228, Total

The analyses presented in this report were performed by Energy Laboratories, Inc., 2393 Salt Creek Hwy, Casper, WY 82601-9601, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

Energy Laboratories, Inc. verifies the reported results for the analysis has been technically reviewed and approved for release.

If you have any questions regarding these test results, please contact your Project Manager.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Container/Temp Blank temperature:	1.0°C No Ice		
Containers requiring zero headspace have no headspace or bubble that is <6mm (1/4").	Yes ☐	No ☐	No VOA vials submitted ☑
Water - pH acceptable upon receipt?	Yes ☑	No ☐	Not Applicable ☐

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

Trip Blanks and/or Blind Duplicate samples are assigned the earliest collection time for the associated requested analysis in order to evaluate the holding time unless specifically indicated.

Contact and Corrective Action Comments:

The temperature blank temperature in shipping container 1 was 0.3°C, shipping container 2 was 0.2°C, shipping container 3 was -1.8°C, shipping container 4 was -1.0°C, shipping container 5 was 1.0°C, shipping container 6 was 0.8,

Table 5. Parameter and Analysis Summary - Appendix III Detection Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit	Container [3]	Preservation [4]	Max. Holding Time from Sampling [5]
Field Parameters					
pH	EPA 9040C	0.1 units	--	--	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	--	--	Immediately or within 15 minutes
Temperature*	SM 2550 B	--	--	--	Immediately or within 15 minutes
Turbidity*	SM 2130 B	--	--	--	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	--	--	--	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	--	--	--	Immediately or within 15 minutes
General Chemistry					
Chloride	SM 4500 Cl E/11	1.0 mg/L	Plastic	4° ± 2°C	28 days
Fluoride	SM 4500 F E/11	TBD		4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Sulfate	ASTM D516-16	5.0 mg/L		4° ± 2°C	28 days
Total Dissolved Solids	USGS I-1750-85	5.0 mg/L		4° ± 2°C	7 days
Metals (total and dissolved)					
Boron	EPA 6010	0.1	Plastic	HNO_3 to pH<2	6 months
Calcium		1.0			

Notes:
1. Boron, calcium, chloride, fluoride, sulfate, and total dissolved solids are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent methods.
3. Containers and volumes will be specified by the lab.
4. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix III Detection Monitoring list and are collected for informational purposes only.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. February 2025 GL21509219.000

Table 7: Additional List Parameter and Analysis Summary

Parameter [1]	Method Reference [2]	Reporting Limit	Preparation Method Reference [2]	Sample Container [3]	Required Preservation [4]	Maximum Holding Time from Sampling [5]
General Chemistry						
Total Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Bicarbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Carbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Metals (Total and Dissolved)						
Iron	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Magnesium	EPA 6010D	0.2 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Potassium	EPA 6010D	3.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Sodium	EPA 6010D	1.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Aluminum	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Manganese	EPA 6010D	0.05 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months

Notes:

1. All listed parameters are tested in the laboratory. Listed parameters are to be collected in conjunction with other CCR parameter lists (Table 2 and Table 3).

2. Or equivalent method.
3. Containers and volumes will be specified by the analytical laboratory.
4. In addition to the required preservation for each sample container, sufficient ice should be placed with the sample containers in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when samples arrive, measurement of the temperature of samples immediately upon receipt is necessary to confirm that the 4° C temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible following collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid, without the use of qualifiers.

Table 5. Parameter and Analysis Summary - Appendix III Detection Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit	Container [3]	Preservation [4]	Max. Holding Time from Sampling [5]
Field Parameters					
pH	EPA 9040C	0.1 units	--	--	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	--	--	Immediately or within 15 minutes
Temperature*	SM 2550 B	--	--	--	Immediately or within 15 minutes
Turbidity*	SM 2130 B	--	--	--	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	--	--	--	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	--	--	--	Immediately or within 15 minutes
General Chemistry					
Chloride	SM 4500 Cl E/11	1.0 mg/L	Plastic	4° ± 2°C	28 days
Fluoride	SM 4500 F E/11	TBD		4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Sulfate	ASTM D516-16	5.0 mg/L		4° ± 2°C	28 days
Total Dissolved Solids	USGS I-1750-85	5.0 mg/L		4° ± 2°C	7 days
Metals (total and dissolved)					
Boron	EPA 6010	0.1	Plastic	HNO_3 to pH<2	6 months
Calcium		1.0			

Notes:
1. Boron, calcium, chloride, fluoride, sulfate, and total dissolved solids are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent methods.
3. Containers and volumes will be specified by the lab.
4. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix III Detection Monitoring list and are collected for informational purposes only.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Radium-226 and 228 combined	EPA 9315 and EPA 9320	1.0 and 2.0 pCi/L	Plastic	HNO_3	6 months

Notes:
1. Fluoride and all metals are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent method.
3. Listed reporting limits are the maximum allowable reporting limits.
4. Containers and volumes will be specified by the lab.
5. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.

Table 7: Additional List Parameter and Analysis Summary

Parameter [1]	Method Reference [2]	Reporting Limit	Preparation Method Reference [2]	Sample Container [3]	Required Preservation [4]	Maximum Holding Time from Sampling [5]
General Chemistry						
Total Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Bicarbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Carbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Metals (Total and Dissolved)						
Iron	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Magnesium	EPA 6010D	0.2 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Potassium	EPA 6010D	3.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Sodium	EPA 6010D	1.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Aluminum	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Manganese	EPA 6010D	0.05 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months

Notes:

1. All listed parameters are tested in the laboratory. Listed parameters are to be collected in conjunction with other CCR parameter lists (Table 2 and Table 3).

2. Or equivalent method.
3. Containers and volumes will be specified by the analytical laboratory.
4. In addition to the required preservation for each sample container, sufficient ice should be placed with the sample containers in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when samples arrive, measurement of the temperature of samples immediately upon receipt is necessary to confirm that the 4° C temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible following collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid, without the use of qualifiers.

ANALYTICAL SUMMARY REPORT

December 30, 2025

Minnesota Valley Testing Laboratories
1126 N Front St
New Ulm, MN 56073-1176

Work Order: C25120008 Quote ID: C15480
Project Name: 108821

Energy Laboratories, Inc. Casper WY received the following 11 samples for Minnesota Valley Testing Laboratories on 12/1/2025 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
C25120008-001	108821001, MW-223	11/25/25 10:35	12/01/25	Groundwater	Radium 226 + Radium 228, Total Radium 226, Total Radium 228, Total
C25120008-002	108821002, MW-226	11/25/25 12:52	12/01/25	Groundwater	Same As Above
C25120008-003	108821003. MW-227	11/26/25 08:58	12/01/25	Groundwater	Same As Above

C25120008-011	108821011, FB-2025	11/26/25 10:50	12/01/25	Groundwater	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 2393 Salt Creek Hwy, Casper, WY 82601-9601, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

Energy Laboratories, Inc. verifies the reported results for the analysis has been technically reviewed and approved for release.

If you have any questions regarding these test results, please contact your Project Manager.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

ND - Not detected at the Reporting Limit (RL)

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. As a mutual protection to clients, the public and ourselves, all reports are submitted as the confidential property of clients, and authorization for publication of statements, conclusions or extracts from or regarding our reports is reserved pending our written approval.

Containers requiring zero headspace have no headspace or bubble that is <6mm (1/4").	Yes ☐	No ☐	No VOA vials submitted ☑
Water - pH acceptable upon receipt?	Yes ☑	No ☐	Not Applicable ☐

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

Trip Blanks and/or Blind Duplicate samples are assigned the earliest collection time for the associated requested analysis in order to evaluate the holding time unless specifically indicated.

Contact and Corrective Action Comments:

The temperature blank temperature in shipping container 1 was 0.3°C, shipping container 2 was 0.2°C, shipping container 3 was -1.8°C, shipping container 4 was -1.0°C, shipping container 5 was 1.0°C, shipping container 6 was 0.8,

Table 5. Parameter and Analysis Summary - Appendix III Detection Monitoring

Parameter [1]	Method Reference [2]	Target Reporting Limit	Container [3]	Preservation [4]	Max. Holding Time from Sampling [5]
Field Parameters					
pH	EPA 9040C	0.1 units	--	--	Immediately or within 15 minutes
Specific Conductance*	LSASDPROC-1010-R7	1.00 umhos/cm	--	--	Immediately or within 15 minutes
Temperature*	SM 2550 B	--	--	--	Immediately or within 15 minutes
Turbidity*	SM 2130 B	--	--	--	Immediately or within 15 minutes
Dissolved Oxygen (DO)*	LSASDPROC-106-R4	--	--	--	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	--	--	--	Immediately or within 15 minutes
General Chemistry					
Chloride	SM 4500 Cl E/11	1.0 mg/L	Plastic	4° ± 2°C	28 days
Fluoride	SM 4500 F E/11	TBD		4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Sulfate	ASTM D516-16	5.0 mg/L		4° ± 2°C	28 days
Total Dissolved Solids	USGS I-1750-85	5.0 mg/L		4° ± 2°C	7 days
Metals (total and dissolved)					
Boron	EPA 6010	0.1	Plastic	HNO_3 to pH<2	6 months
Calcium		1.0			

Notes:
1. Boron, calcium, chloride, fluoride, sulfate, and total dissolved solids are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent methods.
3. Containers and volumes will be specified by the lab.
4. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

* Additional parameters that are not part of the Appendix III Detection Monitoring list and are collected for informational purposes only.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. Dissolved Oxygen (DO)*	LSASDPROC-106-R4	--	--	--	Immediately or within 15 minutes
Oxidation-Reduction Potential (ORP)*	LSASDPROC-113-R3	--	--	--	Immediately or within 15 minutes
General Chemistry					
Fluoride	SM 4500 F E/11	TBD	Plastic	4° ± 2°C	28 days
pH (lab)*	SM 4500 H+ B/11	0.1 units		4° ± 2°C	Immediately or within 15 minutes
Metals (total and dissolved)					
Antimony	EPA 6010 / 6020 as applicable	0.001 mg/L	Plastic	HNO_3 to pH<2	6 months
Arsenic		0.002			
Barium		0.002			
Beryllium		0.0005			
Cadmium		0.0005			
Chromium		0.002			
Cobalt		0.002			
Lead		0.0005			
Lithium		0.02			
Molybdenum		0.002			
Selenium		0.002			
Thallium		0.0005			
Mercury	EPA 245.1	0.0002	Plastic	HNO_3 to pH<2	28 days
Radium-226 and 228 combined	EPA 9315 and EPA 9320	1.0 and 2.0 pCi/L	Plastic	HNO_3	6 months

Notes:
1. Fluoride and all metals are tested in the laboratory. Temperature, turbidity, specific conductance, dissolved oxygen, and oxidation-reduction potential are tested in the field and pH is tested in the field and in the laboratory.
2. Or equivalent method.
3. Listed reporting limits are the maximum allowable reporting limits.
4. Containers and volumes will be specified by the lab.
5. Sufficient ice should be placed with the samples in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when the samples arrive, it is necessary to immediately measure the temperature of the samples and confirm that the temperature maximum has not been exceeded.
6. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid.

Table 7: Additional List Parameter and Analysis Summary

Parameter [1]	Method Reference [2]	Reporting Limit	Preparation Method Reference [2]	Sample Container [3]	Required Preservation [4]	Maximum Holding Time from Sampling [5]
General Chemistry						
Total Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Bicarbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Carbonate Alkalinity	SM 2320B	10 mg/L	--	Plastic	≤ 4° C	14 days
Metals (Total and Dissolved)						
Iron	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Magnesium	EPA 6010D	0.2 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Potassium	EPA 6010D	3.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Sodium	EPA 6010D	1.0 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Aluminum	EPA 6010D	0.1 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months
Manganese	EPA 6010D	0.05 mg/L	EPA 3010A	Plastic or Glass	HNO_3 to pH < 2	6 months

Notes:

1. All listed parameters are tested in the laboratory. Listed parameters are to be collected in conjunction with other CCR parameter lists (Table 2 and Table 3).

2. Or equivalent method.
3. Containers and volumes will be specified by the analytical laboratory.
4. In addition to the required preservation for each sample container, sufficient ice should be placed with the sample containers in the shipping container to ensure that ice is still present when the samples arrive at the laboratory. However, even if ice is present when samples arrive, measurement of the temperature of samples immediately upon receipt is necessary to confirm that the 4° C temperature maximum has not been exceeded.
5. Samples should be analyzed as soon as possible following collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid, without the use of qualifiers.

MVTL guarantees the accuracy of the analysis done on the sample submitted for testing. It is not possible for MVTL to guarantee that a test result obtained on a particular sample will be the same on any other sample unless all conditions affecting the sample are the same, including sampling by MVTL. Notes:
mg/L: milligrams per liter
pCi/L: picocuries per liter
GWPS: Groundwater Protection Standard
AM: Assessment Monitoring
Trends were tested at α = 99%. Statistically significant trends are reported at α = 99%.
N/A: Not applicable - trends and normality were not tested for parameters with greater than 50% non-detects.
None: No statistically significant trends were identified.
A discussion of the calculation of lower and upper confidence intervals is provided in-text.
Only datasets where both the upper and lower confidence intervals exceed the GWPS are considered outside of compliance.

TERRA SYSTEMS FINAL REPORT TO WSP FOR GREAT RIVER ENERGY COAL ASH RESIDUE PHASE II TREATABILITY STUDY VERSION 2

1.0 INTRODUCTION

Coal ash residue landfill may generate anaerobic conditions which allow metals such as arsenic to accumulate to levels above regulatory limits. This bench-scale treatability evaluated conditions to precipitate arsenic for two groundwaters, MW-103 and MW-211, and associated soils. The groundwater protection standards (GWPS) targets are 0.0060 mg/L antimony, 0.010 mg/L arsenic, 2 mg/L barium, 0.0040 mg/L beryllium, 0.005 mg/L cadmium, 0.1 mg/L chromium, 0.0060 mg/L cobalt, 0.015 mg/L lead, 0.325 mg/L lithium, 0.1 mg/L molybdenum, and 0.050 mg/L selenium.

2.0 BENCH-SCALE STUDY

The objective of the bench-scale study was to evaluate the appropriate in situ remediation technology for arsenic:

- Identify the feasibility of As in-situ remediation by buffer (sodium bicarbonate).
- Identify the feasibility of As in-situ remediation by ferrous sulfate heptahydrate addition.
- Identify the feasibility of As in-situ remediation by ferrous sulfate heptahydrate and sodium bicarbonate addition.
- Determine Identify the feasibility of As in-situ remediation by Ferroblack Fe+ ferrous sulfide addition.
- the design parameters including reagent dosage and demand.

2.1 Bench-scale Groundwater and Soil Collection

Groundwater and soil samples were collected from the two locations, MW-103 and MW-211. On June 18, 23.2 kg of soil from BH103R and 25.0 kg of soil from BH211R were received at Terra Systems (TS). On June 24, 2025 20.1 kg of groundwater from MW-103 and 20.0 kg of groundwater from MW-211 were received. The samples were delivered on ice to the TS under a chain of custody.

2.2 Baseline Characterization

At the beginning of the bench-scale treatability test, the baseline characterization was performed to verify contaminant concentrations in the samples. The groundwater samples were homogenized to the extent possible. The homogenized groundwater samples were analyzed for:

- total antimony, arsenic, barium, beryllium, boron, cadmium, chromium, cobalt, iron, lead, lithium, manganese, molybdenum, and selenium by SW 6020B
- dissolved antimony, arsenic, barium, beryllium, boron, cadmium, chromium, cobalt, iron, lead, lithium, manganese, molybdenum, and selenium by SW 6020B
- total alkalinity by SM20 2320B-2011
- sulfide by SM4500 S2 D-2011
- total organic carbon by EPA 415.1
- ferrous iron by Standard Methods 3500 Fe B
- sulfate by EPA 300.0

The soil samples were analyzed for total antimony, arsenic, barium, beryllium, boron, cadmium, chromium, cobalt, iron, lead, lithium, manganese, molybdenum, and selenium by SW 6020B and percent moisture.

In addition, soil and groundwater slurries were prepared with 770 g groundwater and 920 g soil for MW-103 and MW-211. These samples were analyzed for:

- total antimony, arsenic, barium, beryllium, boron, cadmium, chromium, cobalt, iron, lead, lithium, manganese, molybdenum, and selenium by SW 6020B
- dissolved antimony, arsenic, barium, beryllium, boron, cadmium, chromium, cobalt, iron, lead, lithium, manganese, molybdenum, and selenium by SW 6020B

Eurofins Lancaster Laboratories Environmental (ELLE) conducted the analyses. TS measured pH, ORP, dissolved oxygen (DO), specific conductivity (SC), bicarbonate alkalinity, total hardness, ferrous iron, and sulfide by using calibrated meters and Hach procedures.

2.3 Initial Characterization Results

Table 1 presents the results of the initial characterization of the groundwaters, soils, and slurries of groundwater and soil.

For MW-103, TS found that the groundwater had a pH of 8.7 SU, ORP of 205 mV, dissolved oxygen (DO) of 8.3 mg/L, specific conductivity of 1,744 µS/cm, bicarbonate alkalinity of 960 mg/L as CaCO3, hardness of 360 mg/L as CaCO3, ferrous iron of <0.05 mg/L, total iron of 1.6 mg/L, and 0.01 mg/L sulfide. ELLE found 540 mg/L total alkalinity, sulfate of 760 mg/L, <0.10 mg/L sulfide, <0.05 mg/L ferrous iron, total organic carbon (TOC) of 8.8-8.9 mg/L. Many metals were detected as J values which are below the method calibration range but above the minimum detectable concentration. The only metal that exceeded the GWPS was total arsenic at 0.011 mg/L (GWPS = 0.010 mg/L). The following total metals were not detected: beryllium, cadmium, and chromium. Trace levels (<0.0010 mg/L) of total antimony, cobalt, and lead were detected. A low level (0.0010 to 0.010 mg/L) of total selenium was also detected. Moderate levels (0.010 to 0.1 mg/L) of total cobalt, iron, lithium, manganese, and molybdenum were detected. High levels (>0.1 mg/L) of barium and boron were detected. The following dissolved metals were not detected: beryllium, cadmium, chromium, and lithium. Trace levels (<0.0010 mg/L) of dissolved

antimony, cobalt, and lead were detected. Low levels (0.0010 to 0.010 mg/L) of dissolved arsenic (below the GWPS), barium, and selenium were also detected. Moderate levels (0.010 to 0.1 mg/L) of barium, iron, manganese, and molybdenum were found. Dissolved boron was not analyzed.

The following metals were detected in the MW-103 soil: 7.6 mg/kg arsenic, 130 mg/kg barium, 0.65 mg/kg beryllium, 13 mg/kg boron, 22 mg/kg chromium, 7.3 mg/kg cobalt, 17,000 mg/kg iron, 8.8 mg/kg lead, 11 mg/kg lithium, 290 mg/kg manganese, 1.0 mg/kg molybdenum, and 11.2% moisture.

In the soil slurry with MW-103 groundwater and soil, the following total metals exceeded the GWPS: antimony (0.0080 mg/L), arsenic (0.27 mg/L), barium (7.7 mg/L), beryllium (0.041 mg/L), cadmium (0.024 mg/L), chromium (0.89 mg/L), cobalt (0.50 mg/L), lead (0.55 mg/L), and lithium (0.59 mg/L). It is likely that some of the soil was carried over to the total analyses as dissolved metals were below the GWPS except for molybdenum (0.12 mg/L). Dissolved arsenic was 0.0019 J mg/L.

For MW-211, TS found that the groundwater had a pH of 8.1 SU, ORP of 212 mV, DO of 5.3 mg/L, specific conductivity of 1,679 µS/cm, bicarbonate alkalinity of 720 mg/L as CaCO3, hardness of 600 mg/L as CaCO3, ferrous iron of <0.05 mg/L, total iron of 1.7 mg/L, and 0.02 mg/L sulfide. ELLE found 540 mg/L total alkalinity, sulfate of 780 mg/L, <0.10 mg/L sulfide, <0.05 mg/L ferrous iron, and total organic carbon (TOC) of 6.4-6.6 mg/L. The only metal that exceeded the GWPS was total arsenic at 0.013 mg/L. The following total metals were not detected: antimony, beryllium, cadmium, chromium, lead, lithium, and selenium. Trace levels (<0.0010 mg/L) of total cobalt were detected. Moderate levels (0.01 to 0.10 mg/L) of total iron, lithium, manganese, and molybdenum. Elevated levels (>0.10 mg/L) of total barium, boron, and manganese were found. The following dissolved metals were not detected: antimony, beryllium, cadmium, chromium, lead, lithium, and selenium. A trace level (<0.0010 mg/L) of dissolved cobalt was detected. Low levels (0.0010 to 0.010 mg/L) of dissolved arsenic (below GWPS) was detected. Moderate levels (0.010 to 0.1 mg/L) of dissolved barium, iron, and molybdenum were also detected. Dissolved manganese was 0.60 mg/L. Dissolved boron was not analyzed.

The following metals were detected in the MW-211 soil: 7.8 mg/kg arsenic, 110 mg/kg barium, 0.39 J mg/kg beryllium, 8.2 J mg/kg boron, 14 mg/kg chromium, 5.2 mg/kg cobalt, 13,000 mg/kg iron, 5.5 mg/kg lead, 7.0 mg/kg lithium, 220 mg/kg manganese, 0.56 J mg/kg molybdenum, and 15.0% moisture.

In the soil slurry with MW-211 groundwater and soil, the following total metals exceeded the GWPS: antimony (0.0180 mg/L), arsenic (0.83 mg/L), barium (20 mg/L), beryllium (0.061 mg/L), cadmium (0.032 mg/L), chromium (1.4 mg/L), cobalt (1.1 mg/L), lead (1.1 mg/L), lithium (1.2 mg/L), and selenium (0.059 mg/L). It is likely that some of the soil was carried over to the total analyses as all dissolved metals were below the GWPS. Dissolved arsenic was 0.0043 mg/L.

0.011	Exceeds GWPS									
<0.057	Detection limit exceeds GWPS									

2.4 MW-103 Screening

Screening studies were conducted in 250 mL bottles with 150 mL of deaerated MW-103 groundwater (sparged with nitrogen for 15 minutes) and 180 g soil (Table 2). The dissolved oxygen levels, pH, and ORP were measured using calibrated dissolved oxygen, pH, and ORP meters after 1, 2, 3, and 7 days were measured. The withdrawn volume was replaced and glass marbles added so there is no headspace. The results from these tests were provided to WSP along with the initial characterization results.

2.4.1 Control

In the Control, the DO increased from 1.2 mg/L on Day 0 to 4.7 mg/L on Day 7. The pH remained 8.4 SU. The ORP ranged from 201 to 213 mV. Specific conductivity ranged from 1,301 to 1,831 µS/cm.

2.4.2 Sodium Bicarbonate Buffer

Sodium bicarbonate was introduced at loadings of 2, 5.0, and 10.0 g/L. The DO ranged between 1.1 and 6.0 mg/L. The pH ranged from 8.1 to 8.8 SU with little difference between the 2, 5, and 10 g/L $NaHCO_3$ loadings. The ORP ranged from 207 to 233 mV. The specific conductivity increased at the higher $NaHCO_3$ loadings to a maximum of 6,230 µS/cm.

2.4.3 Ferrous Sulfate Heptahydrate

Ferrous sulfate heptahydrate was introduced at loadings of 1.0, 2.0, 5.0 and 10 g/L. The DO ranged between 0.5 and 0.8 mg/L. The pH ranged from 6.3 to 7.6 SU with lower pHs at the higher $FeSO_4$-$7H_2O$ loadings. The ORP ranged from 197 to 254 mV. The specific conductivity increased at the higher $FeSO_4$-$7H_2O$ loadings.

2.4.4 Ferrous Sulfate Heptahydrate and Sodium Bicarbonate

Ferrous sulfate heptahydrate was introduced at loadings of 1.0, 2.0, 5.0 and 10 g/L and each bottle also received 5 g/L sodium bicarbonate. The DO was 0.5 mg/L. The pH ranged from 6.2 to 7.7 SU with lower pHs at the higher $FeSO_4$-$7H_2O$ loadings. The addition of 5 g/L $NaHCO_3$ increased the pH slightly over the corresponding $FeSO_4$-$7H_2O$ loadings without the buffer. The ORP ranged from 189 to 245 mV. There was little difference in the specific conductivity between the different loadings of $FeSO_4$-$7H_2O$ due to the sodium bicarbonate.

2.4.5 Ferroblack

Ferroblack was introduced at loadings of 2.0, 5.0, and 10 g/L. The DO ranged between 0.5 and 0.7 mg/L. The pH ranged from 8.2 to 9.4 SU with higher pHs at the higher Ferroblack loadings. The ORP ranged from 183 to 219 mV. The specific conductivity increased at the higher Ferroblack loadings.

2.5 MW-211 Screening

Screening studies were conducted in 250 mL bottles with 150 mL of deaerated MW-211 groundwater (sparged with nitrogen for 15 minutes) and 180 g soil (Table 3).

2.5.1 Control

The control DO ranged from 3.3 to 7.4 mg/L. The pH ranged from 7.9 to 8.6 SU. The ORP ranged from 193 to 222 mV. Specific conductivity ranged from 1,557 to 2,950 /cm.

2.4.2 Sodium Bicarbonate Buffer

Sodium bicarbonate was introduced at loadings of 2.0, 5.0, and 10. 0 g/L. The DO ranged between 0.8 and 7.1 mg/L. The pH ranged from 7.5 to 8.1 SU with little difference between the 2, 5, and 10 g/L $NaHCO_3$ loadings. The ORP ranged from 198 to 238 mV. The specific conductivity increased at the higher $NaHCO_3$ loadings.

2.4.3 Ferrous Sulfate Heptahydrate

Ferrous sulfate heptahydrate were introduced at loadings of 1.0, 2.0, 5.0 and 10 g/L. The DO ranged between 0.5 and 4.5 mg/L. The pH ranged from 6.4 to 7.8 SU with lower pHs at the higher $FeSO_4$-$7H_2O$ loadings. The ORP ranged from 198 to 265 mV. The specific conductivity ranged from 670 to 2,330 /cm.

2.4.4 Ferrous Sulfate Heptahydrate and Sodium Bicarbonate

Ferrous sulfate heptahydrate was introduced at loadings of 1.0, 2.0, 5.0 and 10 g/L and each bottle also received 5 g/L sodium bicarbonate. The DO ranged between 0.5 and 2.1 mg/L. The pH ranged from 6.0 to 7.4 SU with lower pHs at the higher $FeSO_4$-$7H_2O$ loadings. The addition of 5 g/L $NaHCO_3$ increased the pH slightly over the corresponding $FeSO_4$-$7H_2O$ loading without the buffer. The ORP ranged from 169 to 287 mV. There was little difference in the specific conductivity.

2.4.5 Ferroblack

Ferroblack were introduced at loadings of 2.0, 5.0, and 10 g/L. The DO ranged between 0.5 and 5.4 mg/L. The pH ranged from 7.9 to 8.9 SU with higher pHs at the higher Ferroblack loadings. The ORP ranged from 186 to 273 mV. The specific conductivity increased at the higher Ferroblack loadings.

3.0 BATCH TESTS

Groundwater was sparged with nitrogen for 15 minutes. The batch tests were done in 1,280 mL bottles with about 770 g groundwater and 920 g soil (a volumetric ratio of 60:40 groundwater to soil with a density of 1.8 g/cm^3). Three loadings of Prochem sodium bicarbonate (Lot 12012), four loadings of ferrous sulfate heptahydrate (Prochem Lot 53831), three loadings of Prochem ferrous sulfate heptahydrate with 5 g/L Prochem sodium bicarbonate, three loadings of Ferroblack Fe+, and a control were prepared for each groundwater and soil. The reagent loadings were based upon the screening tests and chosen in consultation with WSP. The dissolved oxygen levels, pH, and ORP were measured using calibrated dissolved oxygen, pH, ORP, and specific conductivity meters in samples collected on Days 0 and 7. The bottles were sacrificed and the DO, pH, ORP, and specific conductivity were conducted by TS using calibrated meters. In addition, aqueous samples for following parameters were collected to be analyzed by ELLE:

- total antimony, arsenic, barium, beryllium, boron, cadmium, cobalt, chromium, iron, lead, lithium, manganese, molybdenum, and selenium by SW 6020B
- dissolved antimony, arsenic, barium, beryllium, boron, cadmium, cobalt, chromium, iron, lead, lithium, manganese, molybdenum, and selenium by SW 6020B
- alkalinity by SM20 2320B-2011
- sulfide by SM4500 S2 D-2011
- total organic carbon by EPA 415//1
- ferrous iron by Standard Methods 3500 Fe B
- sulfate by EPA 300.0

Table 4 presents the metals content of the reagents after dilution in distilled water from previous studies. The 10 g/L solutions of the Prochem Sodium Bicarbonate had detectable dissolved boron (0.282 mg/L), dissolved barium (0.0362 mg/L), dissolved cadmium (0.0059 mg/L in one sample and not detected in a second sample), dissolved iron (0.030 J mg/L), 0.000741 mg/L lead, and 0.028 mg/L dissolved manganese. The only total metal detected was 0.022 mg/L manganese. The Prochem Ferrous Sulfate heptahydrate diluted to 10 g/L had 2,750 mg/L sulfate, 0.396 J mg/L dissolved boron, 0.00115 J mg/L dissolved barium, 0.0178 mg/L dissolved cobalt (exceeds GWPS), 0.0536 mg/L dissolved chromium, 2,020 mg/L dissolved iron, 0.000889 mg/L dissolved molybdenum, 0.000283 mg/L J dissolved lead, and 0.000324 mg/L J selenium. Total metals were not analyzed. The Ferroblack Fe+ supplied by Redox Solutions for this study has not been analyzed.

3.1 MW-103 Field Results

Table 5 presents the field parameters for MW-103. Table 6 shows the sulfide, total alkalinity, sulfate, dissolved and total antimony, arsenic, barium, beryllium, boron, cadmium, cobalt, chromium, iron, lead, lithium, manganese, molybdenum, and selenium. Dissolved and total antimony, barium, beryllium, cadmium, chromium, lithium, lead, molybdenum, and selenium were never detected above their GWPS. Total manganese was detected in the blank associated with several treatments for MW-103. There was no GWPS for boron, iron, or manganese.

3.1.1 Control

The control DO ranged from 6.5 to 7.8 mg/L. The pH was 8.5 SU. The ORP ranged from 26 to 131 mV. Specific conductivity ranged from 2,537 to 2,761 µS/cm.

No detectable sulfide or TOC was measured with a total alkalinity of 820 mg/L as $CaCO_3$. Sulfate was 790 mg/L. All dissolved and total metals were below their respective GWPS.

3.1.2 Sodium Bicarbonate Buffer

Sodium bicarbonate was introduced at loadings of 2, 5.0, and 10.0 g/L. The DO ranged between 5.3 and 7.2 mg/L. The pH ranged from 8.2 to 8.6 SU with little difference between the 2, 5, and 10 g/L $NaHCO_3$ loadings. The ORP ranged from 55 to 157 mV with lower ORPs on Day 7. The specific conductivity increased at the higher $NaHCO_3$ loadings.

No detectable sulfide was found. The maximum TOC was 13 mg/L in the 2 g/L $NaHCO_3$ treatment and not detected in the other treatments. Sulfate ranged from 750 to 810 mg/L. Total alkalinity increased from 1,100 to 5,100 mg/L as $CaCO_3$. All dissolved and total metals were below their respective GWPS except for Arsenic (0.014 mg/L dissolved and 0.015 mg/L total) at

the highest $NaHCO_3$ loading. Dissolved and total arsenic increased as the sodium bicarbonate loadings increased.

3.1.3 Ferrous Sulfate Heptahydrate

Ferrous sulfate heptahydrate were introduced at loadings of 1.0, 2.2, 5.1 and 9.5 g/L. The DO ranged between 1.1 and 5.8 mg/L. The pH ranged from 6.1 to 7.8 SU with lower pHs at the higher $FeSO_4$-$7H_2O$ loadings. The ORP ranged from -156 to 108 mV with negative ORP is most treatments. The specific conductivity ranged from 2,961 to 4,464 µS/cm.

No detectable sulfide was found. TOC was not detected. Sulfate ranged from 1,300 to 3,600 mg/L. Total alkalinity decreased from 370 to 200 mg/L as $CaCO_3$. All dissolved metals were below their respective GWPS except for Co (0.043 to 0.10 mg/L) at the three higher $FeSO_4$-$7H_2O$ loadings. Total metals were below their respective GWPS except for Co (0.110 to 0.20 mg/L) at the two highest $FeSO_4$-$7H_2O$ loadings. The ferrous sulfate heptahydrate contributed cobalt or created conditions where cobalt came into solution from the soil. Detection limits for total arsenic, total beryllium, total cadmium, and total antimony in the 10 g/L $FeSO_4$-$7H_2O$ loading exceeded their GWPS likely due to matrix interferences.

3.1.4 Ferrous Sulfate Heptahydrate and Sodium Bicarbonate

Ferrous sulfate heptahydrate was introduced at loadings of 2.0, 5.0 and 10 g/L. Each bottle also received 5.0 g/L sodium bicarbonate. The DO ranged between 0.7 and 6.8 mg/L. The pH ranged from 6.1 to 7.4 SU with lower pHs at the higher $FeSO_4$-$7H_2O$ loadings. The addition of 5 g/L $NaHCO_3$ increased the pH slightly over the corresponding $FeSO_4$-$7H_2O$ loading without the buffer. The ORP ranged from -236 to 54 mV. There was somewhat higher specific conductivity with the higher $FeSO_4$-$7H_2O$ loadings.

No detectable sulfide was found. TOC was only detected at 12 mg/L in the lowest $FeSO_4$-$7H_2O$ and $NaHCO_3$ treatment. Sulfate ranged from 1,400 to 3,600 mg/L. Total alkalinity decreased from 3,000 to 1,700 mg/L as $CaCO_3$ with increased ferrous sulfate loadings. All dissolved metals were below their respective GWPS except for Co (0.018 to 0.040 mg/L) at the two higher $FeSO_4$-$7H_2O$ loadings. Total metals were below their respective GWPS except for Co (0.042 mg/L) at the highest $FeSO_4$-$7H_2O$ loading. The ferrous sulfate heptahydrate contributed cobalt or created conditions where cobalt came into solution from the soil.

3.1.5 Ferroblack

Ferroblack were introduced at loadings of 5.9, 10.1, and 15.2 g/L. The DO ranged between 2.5 and 5.7 mg/L. The pH ranged from 8.3 to 9.1 SU with higher pHs at the higher Ferroblack loadings. The ORP ranged from -64to 22 mV. The specific conductivity increased at the higher Ferroblack loadings.

No detectable sulfide was found. TOC was only detected at 7.4 to 8.9 mg/L in the lower two Ferroblack treatments. Sulfate ranged from 1,200 to 1,800 mg/L. Total alkalinity increased from 1,200 to 1,800 mg/L as $CaCO_3$. All dissolved and total metals were below their respective GWPS.

3.2 MW-211 Results

Table 7 presents the field parameters for MW-211. Table 8 shows the sulfide, total alkalinity, sulfate, dissolved and total antimony, arsenic, barium, beryllium, boron, cadmium, cobalt, chromium, iron, lead, lithium, manganese, molybdenum, and selenium. Dissolved and total antimony, barium, beryllium, cadmium, chromium, lithium, lead, molybdenum, and selenium were never detected above their GWPS.

3.2.1 Control

The control DO ranged from 5.2 to 5.7 mg/L, pH from 7.7 to 8.2 SU, ORP from 128 to 175 mV, and specific conductivity from 2,629 to 2,807 µS/cm.

No detectable sulfide was measured, the TOC was 11 mg/L, and total alkalinity of 500 mg/L as $CaCO_3$. Sulfate was 770 mg/L. All dissolved and total metals were below their respective GWPS.

3.2.2 Sodium Bicarbonate Buffer

Sodium bicarbonate was introduced at loadings of 2.4, 5.2, and 9.7 g/L. The DO ranged between 4.9 and 5.8 mg/L. The pH ranged from 8.0 to 8.3 SU with little difference between the 2.4, 5.2, and 9.7 g/L $NaHCO_3$ loadings. The ORP ranged from 124 to 172 mV with lower ORPs on Day 0. The specific conductivity increased at the higher $NaHCO_3$ loadings.

No detectable sulfide was found. The TOC ranged from 8.8 J to <25 mg/L.. Sulfate ranged from 770 to 830 mg/L. Total alkalinity increased from 1,300 to 4,900 mg/L as $CaCO_3$. All dissolved and total metals were below their respective GWPS except for Arsenic (0.011 J mg/L dissolved and 0.010 mg/L total) at the highest $NaHCO_3$ loading. Dissolved and total arsenic increased as the sodium bicarbonate loadings increased.

3.2.3 Ferrous Sulfate Heptahydrate

Ferrous sulfate heptahydrate were introduced at loadings of 1.2, 1.8, 4.9, and 12.3 g/L. The DO ranged between 1.4 and 5.9 mg/L. The pH ranged from 6.5 to 7.4 SU with lower pHs at the higher $FeSO_4$-$7H_2O$ loadings. The ORP ranged from -147 to 197 mV with negative ORP is most treatments. The specific conductivity ranged from 2,927 to 4,196 µS/cm.

No detectable sulfide was found. TOC was 6.9 mg/L at the 1.2 g/L loading and non-detect at the other loadings. Sulfate ranged from 1,000 to 2,100 mg/L. Total alkalinity decreased from 430 to <26 mg/L as $CaCO_3$. All dissolved metals were below their respective GWPS except for Co (0.0078 to 0.061 mg/L). Total metals were below their respective GWPS except for Co (0.0087 to 0.064 mg/L). Dissolved and total cobalt increased with the ferrous sulfate heptahydrate loading. The ferrous sulfate heptahydrate contributed cobalt or created conditions where cobalt came into solution from the soil.

.

3.2.4 Ferrous Sulfate Heptahydrate and Sodium Bicarbonate

Ferrous sulfate heptahydrate was introduced at loadings of 2.0, 5.0 and 10 g/L. Each bottle also received 5.0 g/L sodium bicarbonate. The DO ranged between 1.0 and 4.4 mg/L. The pH ranged from 6.4 to 7.3 SU with lower pHs at the higher $FeSO_4$-$7H_2O$ loadings. The addition of 5 g/L $NaHCO_3$ increased the pH slightly over the corresponding $FeSO_4$-$7H_2O$ loading without the

buffer. The ORP ranged from -253 to 70 mV. There was somewhat higher specific conductivity with the higher $FeSO_4$-$7H_2O$ loadings.

No detectable sulfide was found. TOC was not detected. Sulfate ranged from 1,300 to 3,300 mg/L. Total alkalinity decreased from 2,200 to 810 mg/L as $CaCO_3$ as the pH decreased. All dissolved metals were below their respective GWPS except for Co (0.013 to 0.037 mg/L) at the two higher $FeSO_4$-$7H_2O$ loadings. Total metals were below their respective GWPS except for Co (0.014 to 0.039 mg/L) at the two higher $FeSO_4$-$7H_2O$ loadings. The ferrous sulfate heptahydrate contributed cobalt or created conditions where cobalt came into solution from the soil.

3.2.5 Ferroblack

Ferroblack were introduced at loadings of 5.1, 9.9, and 15.5 g/L. The DO ranged between 3.5 and 5.5 mg/L. The pH ranged from 7.6 to 8.7 SU with higher pHs at the higher Ferroblack loadings. The ORP ranged from -190 to 104 mV. The specific conductivity increased at the higher Ferroblack loadings.

No detectable sulfide was found. TOC was detected at 7.4 to 7.9 mg/L. Sulfate ranged from 1,000 to 1,500 mg/L. Total alkalinity ranged from 490 to 510 mg/L as $CaCO_3$. All dissolved and total metals were below their respective GWPS.

4.0 CONCLUSIONS

The following conclusions can be reached from these treatability studies:

- Total arsenic ranged from 0.011 mg/L to 0.013 mg/L in the initial samples of the groundwater and from 0.37 to 0.93 mg/L in the initial samples of the groundwater and soil (potentially due to carryover of soil). All of these concentrations exceeded the GWPS of 0.010 mg/L. Dissolved arsenic ranged from 0.0080 mg/L to 0.0091 mg/L in the initial samples of the groundwater and from 0.0019 to 0.0043 mg/L in the initial samples of the groundwater and soil; all were below the GWPS. Under the incubation conditions employed in these tests, the controls and all treatments except 10 g/L $NaHCO_3$ for MW-103 and MW-211 had dissolved and total arsenic below the GWPS. Increasing the sodium bicarbonate loadings generally resulted in higher dissolved and total arsenic levels. Sodium bicarbonate does not appear to be an appropriate reagent for in situ application to treat arsenic.
- The Prochem ferrous sulfate heptahydrate increased dissolved and total cobalt in many of the treatments for MW-103 and MW-211. Only the treatments with 2 g/L ferrous sulfate heptahydrate and 5 g/L sodium bicarbonate had cobalt below the GWPS in both the MW-103 and MW-211 groundwater and soil treatments. The ferrous sulfate contained cobalt and/or created conditions where it was mobilized from the soil.
- The Controls and the Ferroblack Fe+ treatments had no metals above the GWPS. Aeration to precipitate arsenic or addition of Ferroblack Fe+ would seem the most appropriate treatments for arsenic at this site.

Please let me know if you have any questions about this final report.

Sincerely,
TERRA SYSTEMS, INC.

JOB DESCRIPTION

WSP GRE Stanton ND Phase II

JOB NUMBER

410-230305-1

Eurofins Lancaster Laboratories Environment Testing, LLC
2425 New Holland Pike
Lancaster PA 17601

See page two for job notes and contact information.

my EOL

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Authorization

Generated
7/16/2025 8:30:34 AM

Authorized for release by
Stephen Gordon, Senior Project Manager
Stephen.Gordon@et.eurofinsus.com
(412)525-0071

Compliance Statement

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Definitions/Glossary

Client: Terra Systems Inc
Job ID: 410-230305-1
Project/Site: WSP GRE Stanton ND Phase II

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
cn	Refer to Case Narrative for further detail

Metals

Qualifier	Qualifier Description
cn	Refer to Case Narrative for further detail
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
cn	Refer to Case Narrative for further detail
F1	MS and/or MSD recovery exceeds control limits.
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
HF	Parameter with a holding time of 15 minutes. Test performed by laboratory at client's request. Sample was analyzed outside of hold time.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
410-230305-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 6/25/2025 5:30 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.1°C.

HPLC/IC
Method 300_ORGFM_28D: (ICV 410-664820/7) is compliant under method criteria for sulfate. The software does not display the data to the whole number as is listed in the method. When applying the evaluation to a whole number of 10%D, the QC passes the criteria.

Method 300_ORGFM_28D: The ICV is compliant under method criteria for Sulfate. The software does not display the data to the whole number as is listed in the method. When applying the evaluation to a whole number of 10%D, the QC passes the criteria.

MW-103 IC (410-230305-1) and MW-211 IC (410-230305-2)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 6010D - Dissolved: The following samples were diluted due to the nature of the sample matrix: MW-103 IC (410-230305-1) and MW-211 IC (410-230305-2). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method SM4500_S2_D - Dissolved: The following samples were received with less than 2 days remaining on the holding time or less than one shift (8 hours) remaining on a test with a holding time of 48 hours or less. As such, the laboratory had insufficient time remaining to perform the analysis within holding time: MW-103 IC (410-230305-1) and MW-211 IC (410-230305-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
The cooler's custody seal is intact.	N/A	Not present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature acceptable,where thermal pres is required(</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV:Container Temp acceptable,where thermal pres is required (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Is the Field Sampler's name present on COC?	True	
Sample custody seals are intact.	N/A	
VOA sample vials do not have headspace >6mm in diameter (none, if from WV)?	N/A

JOB DESCRIPTION

WSP GRE Stanton SD Phase II

JOB NUMBER

410-232932-1

Eurofins Lancaster Laboratories Environment Testing, LLC
2425 New Holland Pike
Lancaster PA 17601

See page two for job notes and contact information.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Authorization

Generated
8/1/2025 9:38:34 AM

Authorized for release by
Stephen Gordon, Senior Project Manager
Stephen.Gordon@et.eurofinsus.com
(412)525-0071

Compliance Statement

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

Metals

Qualifier	Qualifier Description
^2	Calibration Blank (ICB and/or CCB) is outside acceptance limits.
cn	Refer to Case Narrative for further detail
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
410-232932-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 7/18/2025 5:27 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.6°C.

Receipt Exceptions
The Chain-of-Custody (COC) was improperly completed. Sample matrix is soil. COC lists sample matrix as water.

Metals
Method 6010D - Total Recoverable: The reference method requires samples to be preserved to a pH of <2. The following sample was received with insufficient preservation at a pH of 7: MW-211 Soil + GW IC (410-232932-3). The sample(s) were preserved to the appropriate pH in the laboratory.
This does not meet regulatory requirements.

Method 6010D - Total Recoverable: The reference method requires samples to be preserved to a pH of <2. The following sample was received with insufficient preservation at a pH of 5: MW-103 Soil + GW IC (410-232932-1). The sample(s) were preserved to the appropriate pH in the laboratory.
This does not meet regulatory requirements.

Method 6010D - Total Recoverable: Due to the matrix, the initial volume(s) used for the following sample deviated from the standard procedure: MW-103 Soil + GW IC (410-232932-1). The reporting limits (RLs) have been adjusted proportionately.

Method 6020B - Total Recoverable: Due to the matrix, the initial volume(s) used for the following sample deviated from the standard procedure: MW-103 Soil + GW IC (410-232932-1). The reporting limits (RLs) have been adjusted proportionately.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
The cooler's custody seal is intact.	N/A	Not present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature acceptable,where thermal pres is required(</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV:Container Temp acceptable,where thermal pres is required (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Is the Field Sampler's name present on COC?	True	
Sample custody seals are intact.	N/A	Not present.
VOA sample vials do not have headspace >6mm in diameter (none, if from WV)?	N/A	

Sample Preservation Checks (performed by the laboratory)

Question	Answer	Comment
Did the sample containers checked meet expected preservation conditions?	False	Refer to Job Narrative for details.

ANALYTICAL REPORT

PREPARED FOR

Attn: Dr. Michael D Lee
Terra Systems Inc
130 Hickman Road
Suite 1
Claymont, Delaware 19703

Generated 9/18/2025 2:53:48 PM

JOB DESCRIPTION

WSP GRE Stanton SD CCR Phase II

JOB NUMBER

410-239099-1

Eurofins Lancaster Laboratories Environment Testing, LLC
2425 New Holland Pike
Lancaster PA 17601

See page two for job notes and contact information.

myEOL

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Authorization

Generated

Authorized for release by
Stephen Gordon, Senior Project Manager
Stephen.Gordon@et.eurofinsus.com
(412)525-0071

Eurofins Lancaster Laboratories Environment Testing, LLC

Compliance Statement

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Project/Site: WSP GRE Stanton SD CCR Phase II

Qualifiers

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
cn	Refer to Case Narrative for further detail
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
cn	Refer to Case Narrative for further detail
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
410-239099-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/26/2025 6:30 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.6°C.

Receipt Exceptions
The COC is marked for Ferrous Iron 415.1, which is the TOC method. There are no Ferrous Iron Containers, so it was assumed that analyses name was listed in error and it was not scheduled for analysis. MW-103 Control (410-239099-1), MW-103 2 g/L NaHCO3 (410-239099-2), MW-103 5 g/L NaHCO3 (410-239099-3), MW-103 10 g/L NaHCO3 (410-239099-4), MW-103 1 g/L FeSO4-7H2O (410-239099-5), MW-103 2 g/L FeSO4-7H2O (410-239099-6), MW-103 5 g/L FeSO4-7H2O (410-239099-7), MW-103 10 g/L FeSO4-7H2O (410-239099-8), MW-103 5 g/L NaHCO3 2 g/L FeSO4-7H2O (410-239099-9), MW-103 5 g/L NaHCO3 5 g/L FeSO4-7H2O (410-239099-10), MW-103 5 g/L NaHCO3 10 g/L FeSO4-7H2O (410-239099-11), MW-103 5 g/L FB (410-239099-12), MW-103 10 g/L FB (410-239099-13) and MW-103 15 g/L FB (410-239099-14)

Per email clarification on 8/28, the client mistakenly submitted bottles with phosphoric acid instead of HCL for ferrous iron analysis by SM3500_FE_B. The method and preservative were mislabeled on the COC and bottle labels. The lab can only run this analysis with HCL preservative, so the analysis was canceled.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 6010D - Dissolved: The reference method requires samples to be preserved to a pH of <2. The following sample was received with insufficient preservation at a pH of 7: MW-103 10 g/L NaHCO3 (410-239099-4). The sample(s) were preserved to the appropriate pH in the laboratory.
This does not meet regulatory requirements.

Method 6010D - Dissolved: The following samples were diluted due to the nature of the sample matrix: MW-103 5 g/L FeSO4-7H2O (410-239099-7), MW-103 10 g/L FeSO4-7H2O (410-239099-8), MW-103 5 g/L NaHCO3 2 g/L FeSO4-7H2O (410-239099-9), MW-103 5 g/L NaHCO3 5 g/L FeSO4-7H2O (410-239099-10), MW-103 5 g/L NaHCO3 10 g/L FeSO4-7H2O (410-239099-11), MW-103 5 g/L FB (410-239099-12), MW-103 10 g/L FB (410-239099-13) and MW-103 15 g/L FB (410-239099-14). Elevated reporting limits (RLs) are provided.

Method 6010D - Dissolved: The following sample was diluted due to the nature of the sample matrix: MW-103 10 g/L NaHCO3 (410-239099-4). Elevated reporting limits (RLs) are provided.

Method 6010D - Total Recoverable: The reference method requires samples to be preserved to a pH of <2. The following sample was received with insufficient preservation at a pH of 7: MW-103 10 g/L NaHCO3 (410-239099-4). The sample(s) were preserved to the appropriate pH in the laboratory.
This does not meet regulatory requirements.

Method 6020B - Total Recoverable: The following sample was diluted due to the nature of the sample matrix: MW-103 5 g/L NaHCO3 10 g/L FeSO4-7H2O (410-239099-11). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

Method 2320B: Elevated reporting limits are provided for the following samples due to insufficient sample provided for analysis: MW-103 5 g/L FeSO4-7H2O (410-239099-7) and MW-103 10 g/L FeSO4-7H2O (410-239099-8).

Method 415.1: The reference method requires samples to be preserved to a pH of <2. The following samples were received with insufficient preservation at a pH of 3: MW-103 2 g/L FeSO4-7H2O (410-239099-6), MW-103 5 g/L NaHCO3 2 g/L FeSO4-7H2O (410-239099-9) and MW-103 5 g/L NaHCO3 10 g/L FeSO4-7H2O (410-239099-11). The sample(s) were preserved to the appropriate pH in the laboratory.
This does not meet regulatory requirements.

Method 415.1: The reference method requires samples to be preserved to a pH of <2. The following sample was received with insufficient preservation at a pH of 6: MW-103 Control (410-239099-1). The sample(s) were preserved to the appropriate pH in the laboratory.
This does not meet regulatory requirements.

Method 415.1: The reference method requires samples to be preserved to a pH of <2. The following samples were received with insufficient preservation at a pH of 7: MW-103 10 g/L NaHCO3 (410-239099-4) and MW-103 1 g/L FeSO4-7H2O (410-239099-5). The sample(s) were preserved to the appropriate pH in the laboratory.
This does not meet regulatory requirements.

Method 415.1: The reference method requires samples to be preserved to a pH of <2. The following sample was received with insufficient preservation at a pH of 3: MW-103 5 g/L FB (410-239099-12). The sample(s) were preserved to the appropriate pH in the laboratory.
This does not meet regulatory requirements.

Method 415.1: The following samples were diluted due to the nature of the sample matrix: MW-103 Control (410-239099-1), MW-103 5 g/L NaHCO3 (410-239099-3), MW-103 10 g/L NaHCO3 (410-239099-4), MW-103 1 g/L FeSO4-7H2O (410-239099-5), MW-103 2 g/L FeSO4-7H2O (410-239099-6), MW-103 5 g/L FeSO4-7H2O (410-239099-7), MW-103 10 g/L FeSO4-7H2O (410-239099-8), MW-103 5 g/L NaHCO3 5 g/L FeSO4-7H2O (410-239099-10), MW-103 5 g/L NaHCO3 10 g/L FeSO4-7H2O (410-239099-11) and MW-103 15 g/L FB (410-239099-14). Elevated reporting limits (RLs) are provided.

Method SM4500_S2_D - Dissolved: Elevated reporting limits are provided for the following samples due to insufficient sample provided for preparation: MW-103 10 g/L NaHCO3 (410-239099-4) and MW-103 15 g/L FB (410-239099-14).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature acceptable,where thermal pres is required(</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV:Container Temp acceptable,where thermal pres is required (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	False	Refer to Job Narrative for details.
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Is the Field Sampler's name present on COC?	True	
Sample custody seals are intact.	N/A	Not present.
VOA sample vials do not have headspace >6mm in diameter (none, if from WV)?	N/A	

Sample Preservation Checks (performed by the laboratory)

Question	Answer	Comment
Did the sample containers checked meet expected preservation conditions?	False	Refer to Job Narrative for details.

ANALYTICAL REPORT

PREPARED FOR

Attn: Dr. Michael D Lee
Terra Systems Inc
130 Hickman Road
Suite 1
Claymont, Delaware 19703

Generated 9/19/2025 4:08:50 PM

JOB DESCRIPTION

WSP GRE Stanton SD CCR Phase II

JOB NUMBER

410-239769-1

Eurofins Lancaster Laboratories Environment Testing, LLC
2425 New Holland Pike
Lancaster PA 17601

See page two for job notes and contact information.

myEOL

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Authorization

Generated
9/19/2025 4:08:50 PM

Authorized for release by
Stephen Gordon, Senior Project Manager
Stephen.Gordon@et.eurofinsus.com
(412)525-0071

Compliance Statement

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

Metals

Qualifier	Qualifier Description
^2	Calibration Blank (ICB and/or CCB) is outside acceptance limits.
cn	Refer to Case Narrative for further detail
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
cn	Refer to Case Narrative for further detail
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
410-239769-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/28/2025 5:12 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.9°C.

Receipt Exceptions
The container count for the following samples did not match what was listed on the Chain-of-Custody (COC): MW-211 Control (410-239769-1), MW-211 2 g/L NaHCO3 (410-239769-2), MW-211 5 g/L NaHCO3 (410-239769-3), MW-211 10 g/L NaHCO3 (410-239769-4), MW-211 1 g/L FeSO4-7H2O (410-239769-5), MW-211 2 g/L FeSO4-7H2O (410-239769-6), MW-211 5 g/L FeSO4-7H2O (410-239769-7), MW-211 10 g/L FeSO4-7H2O (410-239769-8), MW-211 5 g/L NaHCO3 2 g/L FeSO4-7H2O (410-239769-9), MW-211 5 g/L NaHCO3 5 g/L FeSO4-7H2O (410-239769-10), MW-211 5 g/L NaHCO3 10 g/L FeSO4-7H2O (410-239769-11), MW-211 5 g/L FB (410-239769-12), MW-211 10 g/L FB (410-239769-13) and MW-211 15 g/L FB (410-239769-14).
The laboratory received 6 total containers, while the COC lists 7 total containers.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 6010D - Dissolved: The reference method requires samples to be preserved to a pH of <2. The following sample was received with insufficient preservation at a pH of 5: MW-211 10 g/L NaHCO3 (410-239769-4). The sample(s) were preserved to the appropriate pH in the laboratory.
This does not meet regulatory requirements.

Method 6010D - Dissolved: The following samples were diluted due to the nature of the sample matrix: MW-211 2 g/L NaHCO3 (410-239769-2), MW-211 1 g/L FeSO4-7H2O (410-239769-5), MW-211 2 g/L FeSO4-7H2O (410-239769-6), MW-211 5 g/L FeSO4-7H2O (410-239769-7) and MW-211 10 g/L FeSO4-7H2O (410-239769-8). Elevated reporting limits (RLs) are provided.

Method 6010D - Total Recoverable: The reference method requires samples to be preserved to a pH of <2. The following sample was received with insufficient preservation at a pH of 5: MW-211 10 g/L NaHCO3 (410-239769-4). The sample(s) were preserved to the appropriate pH in the laboratory.
This does not meet regulatory requirements.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method 2320B: Elevated reporting limits are provided for the following samples due to insufficient sample provided for analysis: MW-211 5 g/L FeSO4-7H2O (410-239769-7) and MW-211 10 g/L FeSO4-7H2O (410-239769-8).

Method 415.1: The reference method requires samples to be preserved to a pH of <2. The following samples were received with insufficient preservation at a pH of 6: MW-211 5 g/L NaHCO3 (410-239769-3) and MW-211 5 g/L NaHCO3 2 g/L FeSO4-7H2O (410-239769-9). The sample(s) were preserved to the appropriate pH in the laboratory.
This does not meet regulatory requirements.

Method 415.1: The reference method requires samples to be preserved to a pH of <2. The following sample was received with

insufficient preservation at a pH of 3: MW-211 5 g/L NaHCO3 5 g/L FeSO4-7H2O (410-239769-10). The sample(s) were preserved to the appropriate pH in the laboratory.
This does not meet regulatory requirements.

Method 415.1: The reference method requires samples to be preserved to a pH of <2. The following sample was received with insufficient preservation at a pH of 6: MW-211 10 g/L NaHCO3 (410-239769-4) and could not be adjusted. This does not meet regulatory requirements.

Method 415.1: The following samples were diluted due to the nature of the sample matrix: MW-211 Control (410-239769-1), MW-211 5 g/L NaHCO3 (410-239769-3), MW-211 10 g/L NaHCO3 (410-239769-4), MW-211 2 g/L FeSO4-7H2O (410-239769-6), MW-211 5 g/L FeSO4-7H2O (410-239769-7), MW-211 10 g/L FeSO4-7H2O (410-239769-8), MW-211 5 g/L NaHCO3 2 g/L FeSO4-7H2O (410-239769-9), MW-211 5 g/L NaHCO3 5 g/L FeSO4-7H2O (410-239769-10) and MW-211 5 g/L NaHCO3 10 g/L FeSO4-7H2O (410-239769-11). Elevated reporting limits (RLs) are provided.

Method SM4500_S2_D - Dissolved: The following samples were diluted due to the nature of the sample matrix: MW-211 2 g/L NaHCO3 (410-239769-2), MW-211 5 g/L NaHCO3 (410-239769-3), MW-211 10 g/L NaHCO3 (410-239769-4), MW-211 1 g/L FeSO4-7H2O (410-239769-5), MW-211 2 g/L FeSO4-7H2O (410-239769-6), MW-211 5 g/L FeSO4-7H2O (410-239769-7), MW-211 5 g/L NaHCO3 2 g/L FeSO4-7H2O (410-239769-9), MW-211 5 g/L NaHCO3 5 g/L FeSO4-7H2O (410-239769-10), MW-211 10 g/L FB (410-239769-13) and MW-211 15 g/L FB (410-239769-14). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
The cooler's custody seal is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature acceptable,where thermal pres is required(</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV:Container Temp acceptable,where thermal pres is required (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Is the Field Sampler's name present on COC?	True	
Sample custody seals are intact.	N/A	Not present.
VOA sample vials do not have headspace >6mm in diameter (none, if from WV)?	N/A	

Sample Preservation Checks (performed by the laboratory)

Question	Answer	Comment
Did the sample containers checked meet expected preservation conditions?	False	Refer to Job Narrative for details.

Bottom Ash Impoundment Arsenic and Molybdenum Assessment Monitoring Data

APPENDIX C
June 2025 Boring Logs and Well Completion Information

1.0 INTRODUCTION

WSP USA Inc. (WSP) has prepared this assessment of corrective measures (ACM) report for the Bottom Ash Impoundment at Great River Energy's (GRE) Stanton Station in accordance with the United States Environmental Protection Agency (USEPA) Coal Combustion Residuals (CCR) Rule, 40 Code of Federal Regulations (CFR) Part 257 and the North Dakota Department of Environmental Quality (NDDEQ) CCR Rule, North Dakota Administrative Code (NDAC) Title 33.1 Article 20 Chapter 08. This ACM has been prepared to evaluate potential corrective measures including source control and groundwater remediation corrective measures to address the identified statistically significant levels (SSLs) of molybdenum and arsenic in groundwater downgradient of the Bottom Ash Impoundment. Molybdenum was detected as an SSL at monitoring well MW-201 and arsenic was detected as an SSL at monitoring well MW-203.

The SSL for molybdenum at MW-201 was identified March 28, 2025, following completion of assessment monitoring statistics associated with the fourth quarter (Q4) 2024 semi-annual sampling and testing event. A notification identifying the SSL for molybdenum was prepared and both posted online and submitted to the NDDEQ on April 8, 2025 (within 30 days of identifying the SSL). The ACM was initiated on June 26, 2025, within 90 days of identifying the SSL for molybdenum.

The SSL for arsenic at MW-203 was identified July 22, 2025, following completion of assessment monitoring statistics associated with the first quarter (Q1) 2025 annual sampling and testing event and initiation of the ACM at the Bottom Ash Impoundment. A notification identifying the SSL for arsenic was prepared and both posted online and submitted to the NDDEQ on August 1, 2025 (within 30 days of identifying the SSL). The ACM for the arsenic SSL was initiated July 22, 2025, by incorporation into the ongoing ACM for the Bottom Ash Impoundment, within 90 days of identified the SSL.

1.1 Purpose

The purpose of this ACM is to identify potential corrective measures to prevent further releases, remediate any identified releases, and restore the groundwater downgradient of the Bottom Ash Impoundment to original conditions. In particular, the ACM evaluates corrective measures including source control and alternatives for groundwater corrective action at the site given the site conditions and constituents of concern. Based on the results of the ACM, further evaluation will be performed, site-specific studies completed, and a final long-term corrective action plan will be developed and implemented pursuant to 40 CFR 257.97 and -98 and NDAC 33.1-20-08-06(6) and (7). This process is typically iterative and may be composed of multiple steps to analyze the effectiveness of corrective measures to address the potential migration of CCR constituents in groundwater at the Bottom Ash Impoundment.

Both the Federal and State rules indicate that corrective measure assessments should include an analysis of the effectiveness of potential corrective measures addressing the following as stated in 40 CFR 257.96(c) and NDAC 33.1-20-08-06(6)(c):

- performance of potential remedies
- reliability of potential remedies
- ease of implementation of potential remedies
- potential impacts of potential remedies, including safety impacts, cross-media impacts, and control of exposure to any residual contamination

- time required to begin and complete the remedy
- any institutional requirements that may substantially affect implementation of the selected remedy, such as state or local permit requirements
- other environmental or public health requirements that may substantially affect implementation of the selected remedy

These evaluation criteria were considered for each potential remedy and are discussed in more detail in the following sections. Once potential corrective measures are identified, they will be further evaluated, and a remedy will be selected using the criteria outlined in 40 CFR 257.97 and -98 and NDAC 33.1-20-08-06(6) and (7).

1.2 Site Background

Stanton Station was a coal-fired electric generation facility located along the Missouri River in Mercer County, approximately three miles southeast of Stanton, North Dakota. Stanton Station began generating power in 1966 and ceased power production in February 2017. Demolition of the industrial site was finished in 2019, with site restoration completed in 2020. CCRs were managed in composite-lined surface water impoundment cells and dry waste landfills regulated and permitted by the NDDEQ in accordance with NDAC Article 33.1-20, Solid Waste Management and Land Protection.

Stanton Station has two CCR units covered by the Federal and State CCR rules:

- Bottom Ash CCR Landfill (Bottom Ash Landfill)
- Bottom Ash CCR Surface Impoundment (Bottom Ash Impoundment)

Locations of the two CCR units, and the Bottom Ash Impoundment groundwater monitoring wells are shown in Figure 1. This ACM pertains only to the Bottom Ash Impoundment.

1.3 Site Closure and Restoration

Site restoration activities began in the summer of 2019 and were completed in the summer of 2020. These activities primarily included closure of the Bottom Ash Landfill and the Bottom Ash Impoundment as well as re-grading the site to promote drainage and vegetative growth.

Documentation of the closure and cover construction at the Bottom Ash Impoundment was included in the construction quality assurance (CQA) report provided to the NDDEQ (GAUSA 2021b). Construction activities associated with the closure of the Bottom Ash Impoundment included:

- Isolation of the south cell and construction of a sump within the south cell
- Closure by removal of the north and center cells, including removal of the high-density polyethylene (HDPE) liner and approximately six inches of the clay soil liner
- Regrading and stabilization of waste in the south cell and construction of a final cover system over the south cell in accordance with the final cover designs outlined in the Closure and Post-Closure Plan (GAI 2019) to minimize infiltration and erosion and to meet or exceed the requirements of 40 CFR 257.102(d)(3)(ii) and NDAC 33.1-20-08-07(3)(d)(3)(b).

Each construction activity included CQA testing and monitoring and was overseen by a professional engineer licensed in the state of North Dakota. Documentation was provided to the NDDEQ (GAUSA 2021b). Construction drawings for the Bottom Ash Impoundment closure are included in Appendix A.

2.0 SITE CONDITIONS

The Stanton Station site is located along the Missouri River, and the general area is primarily characterized by the presence of glacial deposits, with alluvial deposits dominating near-surface geology adjacent to the Missouri River. The following sections detail the regional and site geology and hydrogeology.

2.1 Regional and Site Geology

Regional geology of the area surrounding Stanton Station is documented in the Hydrogeologic Assessment Report, Stanton Station Ash Ponds (Braun 1993). Stanton Station is located in the Missouri Slope District of the Glaciated Missouri Plateau Section of the Great Plains Province. Subsurface and surficial stratigraphy of Mercer County and the adjacent Oliver County were reviewed in depth by C.G. Carlson for the North Dakota Geological Society (Carlson 1973). Primary near-surface stratigraphic units in the area of Stanton Station include the Tongue River formation and Cannonball Formation, with named lignite beds prominent in the vicinity of the site.

Near-surface geology at Stanton Station consists of two primary geologic units: the upper alluvial terrace deposits of the Missouri River, and underlying sediments and bedrock belonging to the Bullion Creek Formation, each of which have varying extents and thickness across the site (Braun 1993).

2.2 Site Hydrogeology

The principal hydrostratigraphic unit and uppermost water-bearing unit in the vicinity of the Bottom Ash Impoundment consists of alluvial deposits, which include two subunits: an upper silty sand and clay, and an underlying outwash sand and gravel. Individually, these subunits are laterally heterogeneous and geologic conditions within these subunits can be characterized by interbedded layers of gravel, sand, silt, clay, and coal.

Due to variations in subunit thickness throughout the site and the interconnected behavior of the identified subunits, groundwater in the uppermost water bearing unit is monitored in both identified subunits. Flow generally moves from southwest to northeast across the site towards the Missouri River. Depths from the ground surface to the uppermost water-bearing unit range from 5 to 20 feet in the area around Stanton Station.

2.3 Groundwater Flow Conditions

Depths to groundwater have been measured at sampled wells during each sampling event prior to purging. Groundwater elevations in the uppermost groundwater at Stanton Station are consistent with historical values and demonstrate that groundwater generally flows to the north and northeast towards the Missouri River.

The groundwater flow rate across each facility was estimated with the equation:

$$V_s = k \times {}^{i}/_{n_e}$$

Where:

V_s = the groundwater flow rate in feet per day (ft/day)

k = the hydraulic conductivity in ft/day, estimated from slug testing results from system wells

i = the hydraulic gradient in feet per feet (ft/ft), calculated based on groundwater elevations for the presented monitoring events

n_e = the effective porosity, a unitless parameter, estimated to be 0.25 for a silt/sand (Duffield 2007), reflective of site soils

Hydraulic conductivity (k) values measured on site ranged from 0.023 ft/day to 21.9 ft/day based on site-specific testing conducted in 2023 and analyzed in 2024 (WSP 2024). As the Bottom Ash Impoundment and Bottom Ash Landfill are adjacent to one another and intersect similar geologic formations within the uppermost water-bearing zone, the groundwater flow rates are assumed to be approximately the same for the facilities during each sampling event and are presented below.

- Q4 2024
  - Average gradient (i) = 0.008 ft/ft
  - Range of groundwater flow velocities (V_s): 0.0007 ft/day to 0.66 ft/day
- Q1 2025
  - Average gradient (i) = 0.007 ft/ft
  - Range of groundwater flow velocities (V_s): 0.0006 ft/day to 0.62 ft/day

3.0 GROUNDWATER MONITORING SUMMARY

3.1 Groundwater Monitoring Program

The CCR groundwater monitoring system at Stanton Station is designed to identify potential impacts from the Bottom Ash Impoundment. The Bottom Ash Impoundment monitoring wells are installed and screened at appropriate locations and depths to obtain groundwater samples from the uppermost water bearing unit. The number and spacing of the downgradient monitoring wells were selected based on the hydrogeologic conditions at the site and the areal extent of the CCR unit in closure, such that impacts to groundwater quality in the uppermost water bearing unit can be detected along potential flow pathways if they were to occur. The current groundwater monitoring system is described in the Coal Combustion Residuals Groundwater Monitoring System Certification, Revision 1 (GAI 2020).

3.2 Site-Specific Groundwater Protection Standards (GWPS)

Site-specific groundwater protection standards (GWPS) as provided in Table 1 were established for statistical comparison with assessment monitoring results. Site-specific GWPS were originally developed from upgradient and side-gradient background locations (MW-8B, MW-7A, MW-7B, MW-105, and MW-6B), with data collected between the start of the CCR monitoring program in 2016 and Q4 2021.

Per 40 CFR 257.95(h) and NDAC 33.1-20-08-06(5)(h), the site-specific GWPS must fall within one of the following categories:

- For constituents for which a maximum contaminant level (MCL) has been established by the USEPA (40 CFR 141.62 and 141.66), the MCL for that constituent will be the site-specific GWPS.
- For the following constituents, the following alternative CCR-specified limits apply within the Federal rule:

- Cobalt – 0.006 milligrams per liter (mg/L)
- Lead – 0.015 mg/L
- Lithium – 0.04 mg/L
- Molybdenum – 0.1 mg/L

- For constituents where the background baseline concentration is higher than the specified levels noted above, a statistical limit determined from the baseline data will be the site-specific GWPS.

Based on the pooled background dataset, the MCL or alternative limit as indicated above were set as the site-specific GWPS for the assessment monitoring constituents, with the exception of lithium.

Each measured concentration of lithium from the upgradient and side-gradient background locations collected to date are greater than the value specified in 40 CFR 257.95(h)(2). The pooled dataset for lithium displayed a non-normal distribution with the included data from 2016 to Q4 2021, resulting in a GWPS of 0.325 mg/L as the highest value in the pooled background dataset as shown in Table 1.

Site-specific GWPS values were originally developed when the Bottom Ash Landfill entered assessment monitoring, with data collected through Q4 2021. Background data collected since Q4 2021 have been reviewed during each assessment monitoring sampling event to confirm the continued applicability of the site-specific GWPS. Changes in the background water quality will continue to be monitored during each assessment monitoring sampling event.

3.3 Assessment Monitoring SSLs

During assessment monitoring sampling events, groundwater samples are collected and analyzed for the assessment monitoring parameters to meet the requirements of 40 CFR 257.95(b) and NDAC 33.1-20-08-06(5). Analytical data from both the annual and semi-annual assessment monitoring events have been statistically analyzed pursuant to 40 CFR 257.93(f) and NDAC 33.1-20-08-06(3)(f), using the methods for assessment monitoring statistics described in detail in the Coal Combustion Residuals Groundwater Statistical Methods Certification, Revision 2 (GAUSA 2021a).

Statistical analysis of the assessment monitoring results from groundwater sampling and analysis of the wells downgradient of the Bottom Ash Impoundment (MW-201, MW-202, MW-203) is performed using a confidence interval approach to evaluate if detected constituent concentrations were SSLs relative to the site-specific GWPS.

A confidence (α) of 95% was used for calculating the Upper Confidence Limit (UCL) and Lower Confidence Limit (LCL) of the compliance data. Confidence limits can be either parametric or non-parametric, dependent on the number of non-detects and data distribution of each data set. For determination of SSLs, the LCL is of primary interest. A confidence interval is only considered statistically above the associated GWPS if both the UCL and LCL exceed the GWPS. If only the UCL exceeds the GWPS while the LCL remains below the GWPS, the results of the test are considered inconclusive. The Unified Guidance recommends that results within this category be interpreted as “in compliance” and not an SSL (USEPA 2009). If both the UCL and LCL are below the GWPS, the data are considered not statistically significant.

An SSL was identified for molybdenum at MW-201 following the Q4 2024 assessment monitoring sampling event. Following identification of the SSL, GRE initiated an assessment of corrective measures for the Bottom Ash Impoundment.

Following initiation of the assessment of corrective measures for the Bottom Ash Impoundment, a separate SSL was identified for arsenic at MW-203 following the Q1 2025 assessment monitoring sampling event.

Data collected during assessment monitoring for arsenic and molybdenum at the background wells and the Bottom Ash Impoundment downgradient wells are shown in Appendix B.

4.0 NATURE AND EXTENT INVESTIGATION

4.1 Field Investigation Activities

Following the identification of the SSL for molybdenum at MW-201, a site investigation plan was developed to help characterize the nature and extent of molybdenum above the GWPS per 40 CFR 257.95(g)(1) and NDAC 33.1-20-08-06(5)(g)(1). The site investigation plan was expanded to also help characterize the nature and extent of arsenic above the GWPS following the identification of the SSL for arsenic at MW-203. Eight additional nature and extent wells were installed based on available information pertaining to groundwater flow direction and gradient downgradient of the Bottom Ash Impoundment. The locations of new and existing monitoring wells used to define the nature and extent of the elevated molybdenum at MW-201 and arsenic at MW-203 are shown in Figure 2.

4.1.1 Property Boundary Well Investigation

A new monitoring well was installed at the downgradient property boundary adjacent to the Missouri River (MW-PB1R) in the direction of groundwater flow. Well MW-PB1R has been installed to a depth approximately 10 feet deeper than the adjacent MW-PB1, which was previously installed as a property boundary well. MW-PB1 has intermittently had insufficient water to be sampled. Both wells (MW-PB1 and MW-PB1R) will be sampled per the schedule established for assessment monitoring within 40 CFR 257.95 and NDAC 33.1-20-08-06(5) when there is sufficient water in the wells. The boring log and well completion information for MW-PB1R and MW-PB1 are included in Appendix B.

4.1.2 June 2025 Nature and Extent Well Investigation

Following the SSL identification, eight additional monitoring wells have been installed to determine the extent of impacts of molybdenum in the vicinity of MW-201 and arsenic in the vicinity of MW-203 (Figure 2).

Five wells, MW-223, MW-224, MW-225, MW-226, and MW-230, were installed and developed in June 2025 near MW-201 to determine the extents of molybdenum. Wells were placed approximately 200 feet to the west (MW-223) and east (MW-224) of MW-201. Additionally, wells were placed in the downgradient direction of groundwater flow, approximately 200 feet (MW-225) and 500 feet (MW-226) to the north and northeast of MW-201. MW-230 was drilled within 10 feet of well MW-201 to a depth intended to intersect the locally defined “bedrock”, to a depth approximately 20 feet deeper than MW-201.

Three additional wells, MW-227, MW-228, and MW-229, were installed and developed in June 2025 near MW-203 to determine the extents of arsenic. Wells were placed approximately 200 feet to the north (MW-227) and south (MW-228) of MW-203, based on the location of the unit boundary and the generalized direction of groundwater flow. MW-229 was installed approximately 400 ft east of MW-203.

Boring logs and well completion information for the wells installed in June 2025 are included in Appendix B.

4.1.3 Additional Nature and Extent Wells

Additional site wells associated with the historical monitoring network for the Bottom Ash Impoundment (MW-1R and MW-104) will continue to be used in conjunction with the monitoring network to evaluate the nature and extent of the identified SSLs, per direction previously provided by NDDEQ (NDDEQ 2023). Additional monitoring locations downgradient of the Bottom Ash Impoundment that are associated with other facilities at Stanton Station will also be reviewed in context of determining the nature and extent of the identified SSLs.

4.1.4 Groundwater Sampling and Analysis

Groundwater samples will be collected from the new and existing nature and extent wells and analyzed for both detection monitoring and assessment monitoring analytes. Samples have not yet been collected from the recently installed nature and extent wells. The recently installed wells will be sampled in accordance with the assessment monitoring program schedule pending installation of dedicated low-flow sampling pumps (scheduled to be installed early October 2025).

4.1.5 Solids Sampling and Analysis

As part of the drilling program for the nature and extent wells in June 2025, solids samples were collected at the installed well locations during drilling and sent for analysis by SGS Canada Inc. Samples are being analyzed using the sequential extraction procedure (SEP; Tessier et al. 1979) and X-ray diffraction (XRD) including clay speciation. Results of the associated analysis have not yet been received and will be included in future submittals.

Soil samples shipped for analysis via SEP and XRD included the following:

- MW-225 from within the screened interval
- MW-226 from within the screened interval
- MW-227 from above the screened interval
- MW-230
  - A sample corresponding to the screened interval of MW-201 (10 to 20 feet below ground surface)
  - A second sample within the screened interval at MW-230 (35 to 40 feet below ground surface)
- MW-PB1R from within the screened interval

5.0 ASSESSMENT OF CORRECTIVE MEASURES

5.1 Objectives of the Corrective Measures

Potential corrective measures are evaluated using the criteria listed in 40 CFR 257.96(c) and NDAC 33.1-20-08-06(6)(c), including performance, reliability, ease of implementation, potential impacts, remedy duration, and institutional and public health requirements.

In addition, the following criteria listed in 04 CFR 257.97(b) and NDAC 33.1-20-08-06(7)(b) must be met by the selected corrective measure:

- Protect human health and the environment.
- Attain applicable GWPS as specified pursuant to 40 CFR 257.95(h) and NDAC 33.1-20-08-06(5)(h).

- Control the source(s) of release(s) to reduce or eliminate, to the maximum extent feasible, further releasees of assessment monitoring constituents to the environment.
- Remove from the environment as much of the contaminated material that was released from the CCR unit as is feasible, considering factors such as avoiding inappropriate disturbance of sensitive ecosystems.
- Comply with standards for management of waste as specified in 40 CFR 257.98(d) and NDAC 33.1-20-08-06(8)(d).

The corrective measures evaluated as part of this ACM are not intended to be an exhaustive list of all possible corrective measures but are focused on corrective measures that are anticipated to be technically feasible and that will likely perform satisfactorily at the site.

Section 5.2 discusses corrective measures primarily associated with source control and Section 5.3 discusses corrective measures primarily associated with groundwater remediation.

5.2 Source Control Corrective Measures

The selected remedy should control the source(s) of release(s) to reduce or eliminate, to the maximum extent feasible, further releases of assessment monitoring constituents to the environment. Source control measures at the Bottom Ash Impoundment are focused both on CCR and leachate present within the closed Bottom Ash Impoundment footprint.

Prior to the initiation of assessment monitoring and the ACM, the Bottom Ash Impoundment was closed with an engineered final cover placed over waste left in place. Closure was completed in accordance with the Closure and Post-Closure Plan (GAI 2019). Although closure was performed prior to initiation of assessment monitoring and the ACM, an evaluation of the previously conducted closure as a source control measure is provided below, indicating why the steps previously taken are considered an appropriate source control measure.

Closure of the Bottom Ash Impoundment provides the primary source control measure to reduce the potential for migration for CCR constituents to groundwater. In addition, removal of leachate by pumping from the constructed sump reduces the volume of remaining leachate within the Bottom Ash Impoundment following closure.

If over the course of corrective action implementation and monitoring, the previously implemented closure measures (engineered cover and leachate removal) are determined to be inadequate, additional source control measures will be further evaluated and implemented. Two potential additional source control measures options include:

- increased leachate removal through the installation of dewatering wells
- complete closure by removal of CCR from the Bottom Ash Impoundment

Table 2 provides a summary of the source control measures compared to the evaluation criteria described in both the Federal and State rules and listed in Section 1.1, as applied to site conditions.

5.2.1 Bottom Ash Impoundment Closure

As noted in Section 1.3, primary closure of the Bottom Ash Impoundment was completed in 2020. Due to site conditions and construction sequencing, the waste on the west end of the south cell was in a soft and saturated state. The waste was stabilized as part of the closure by adding fly ash from Coal Creek Station and Spiritwood

Station (approved by the NDDEQ for beneficial use). Waste slopes were regraded to 7% slopes to direct stormwater off and away from the closed and covered impoundment and to reduce erosion.

The effectiveness of closure of the Bottom Ash Impoundment as a source control relies on the final cover and liner. The Bottom Ash Impoundment is lined with a composite liner consisting of a 60-mil HDPE geomembrane overlying 2 feet of compacted clay with a hydraulic conductivity of 1 x 10^{-7} cm/sec, or less.

The final cover is engineered to minimize the potential for precipitation to infiltrate through the cover and into the waste. The constructed final cover includes a composite system consisting of a geosynthetic clay liner (GCL) overlain by a 60-mil HDPE geomembrane. A 30-inch growth medium layer and 6-inch topsoil layer overly the geomembrane and are designed to support native grass vegetation which supports runoff and removal of precipitation through evapotranspiration. The CQA Engineer observed closure and final cover system construction and:

- Confirmed that all regraded waste and mixed material was compacted to a firm and unyielding surface prior to placement of the final cover system.
- Observed installation of the GCL and geomembrane including all non-destructive and destructive testing of the materials and seams. The HDPE was welded to existing geomembrane liner.
- Observed monitoring and testing of growth medium and topsoil layers to meet project specifications including compaction and soil quality criteria (sodium adsorption ratio, electrical conductivity, and organic matter) prior to seeding and mulching.

Following closure of the Bottom Ash Impoundment, an updated post-closure care plan was prepared for the site in 2022 (GAUSA 2022). Maintenance will be provided on the final cover system for the required post-closure care period so that the integrity and effectiveness of the final cover system is maintained. Maintenance activities will include, as needed, repairs to the final cover to correct any effects related to settlement, subsidence, erosion, or other events, and will be performed to prevent run-on or run-off from eroding or otherwise damaging the final cover.

5.2.2 Leachate Removal

The bottom ash within the Bottom Ash Impoundment south cell was originally hydraulically sluiced into the cell, and precipitation falling on the footprint during operation and closure construction accumulated within the bottom ash. During closure construction, free water was pumped from the south cell and additional waste material from the closure of the north and center cells was added to achieve final waste grades. In addition to removal of free water within the south cell, the constructed sump was pumped during closure construction to remove any leachate that accumulated during closure. Construction of the engineered composite cover significantly reduced the infiltration of precipitation into the waste, but residual water remains within the bottom ash that was not removed during closure construction.

The removal of leachate will reduce leakage through potential defects in the composite liner by reducing the driving head. To remove this residual water, leachate accumulating in the sump has been regularly pumped out and disposed offsite. Up until early 2025, this was accomplished with a vacuum truck pumping the sump dry as often as every few days. In 2025, GRE installed a dedicated pump and holding tank along with power and other controls. This new system pumps leachate from the sump as the leachate accumulates, maintaining the depth of leachate in the sump between approximately 1 and 1.5 feet. This system is planned to operate through the post-

closure period until leachate recharge drops below the level that the installed pumps can operate or until the recharge rate is low enough that an alternative leachate management method becomes preferable.

5.2.3 Increased Leachate Removal

The current leachate removal system is pumping accumulated leachate from the sump located in the northwest corner of the Bottom Ash Impoundment south cell. Leachate accumulates in this sump by flowing through the bottom ash/waste material from areas of higher head to the lower head condition maintained at the sump. The permeability of the bottom ash and waste material, along with the gradient to the sump (distance and head differential) result in a limited flow rate.

To increase the rate of leachate removal, dewatering wells may be installed at other locations and screened within the waste just above the composite liner. Additional dewatering locations are expected to increase the rate of leachate removal by increasing the gradient to each extraction location (reduced flow distance). Increasing the rate of leachate removal will more quickly reduce the driving head over the liner, further reducing the potential for leakage.

Additional dewatering locations will require penetrating the composite cover system, including the geomembrane and GCL. Each penetration can allow for increased infiltration through the cover if not completed correctly. In addition, drilling a well through the waste to just above the liner runs the risk of penetrating the composite liner system, creating a defect that may allow for increased leakage from the unit. These risks will be considered during a more thorough evaluation if the installation of additional dewatering wells is deemed to be necessary.

5.2.4 Closure by Removal

Closure by removal involves removal of the final cover and excavation of all CCR and the composite liner system from the Bottom Ash Impoundment. Excavated materials would be transported to a separate permitted CCR landfill.

Advantages of removal over the current source control include:

- Eliminates the potential for future contamination to occur due to failure of the cover and liner systems of the Bottom Ash Impoundment.
- Reduces the required post-closure monitoring period following implementation if each of the assessment monitoring parameters returned to concentrations below the GWPS.

Disadvantages of removal over the current source control include:

- Requires destruction of the existing cover and liner systems and requires permitting efforts for a separate CCR landfill.
- Increases the overall risk to workers, the surrounding community, and the environment due to factors such as fugitive dust, heavy construction equipment operation and emissions, and potential spills and safety hazards associated with transport to a new site.
- Due to site hydrogeological changes during site restoration, assessment monitoring parameters may not rapidly return to concentrations below the GWPS.

Closure by removal will be more thoroughly evaluated if additional source control measures are deemed necessary.

5.3 Groundwater Remediation Corrective Measures

A summary of the potential groundwater remediation corrective measures evaluated as part of this ACM is included in the following sections. Corrective measures are being evaluated to address the SSLs for molybdenum and arsenic in groundwater downgradient of the Bottom Ash Impoundment unit boundary. Based on site-specific information, knowledge of remedial alternatives, and site conditions at the Bottom Ash Impoundment, the following remedies, either individually or in combination, are being evaluated using the criteria specified in 40 CFR 257.96(c) and NDAC 33.1-20-08-06(6)(c):

- Monitored Natural Attenuation and Enhanced Monitored Natural Attenuation
- Hydraulic Containment (Groundwater Pump and Treat)
- Geochemical Approaches (In-Situ Injection)
- Permeable Reactive Barriers
- Phytoremediation

Following this assessment of corrective measures, additional information will be gathered to further evaluate the identified potential corrective measures and determine which option(s) should be implemented at the site that meets the criteria specified in 40 CFR 257.97(b) and NDAC 33.1-20-08-06(7)(b). Table 3 provides a summary of each of the remedial technologies described below compared to the evaluation criteria described in both the Federal and State rules and listed in Section 1.1, as applied to site conditions.

5.3.1 Monitored Natural Attenuation and Enhanced Monitored Natural Attenuation

The USEPA (2015) defines monitored natural attenuation (MNA) as:

> The reliance on natural attenuation processes (within the context of a carefully controlled and monitored site cleanup approach) to achieve site-specific remediation objectives within a timeframe that is reasonable compared to that offered by other more active methods. The 'natural remediation processes' that are at work in such a remediation approach include a variety of physical, chemical, or biological processes that, under favorable conditions, act without human intervention to reduce the mass, toxicity, mobility, volume, or concentration of contaminants in soil or groundwater. These in situ processes include biodegradation; dispersion; dilution; sorption; volatilization; radioactive decay; and chemical or biological stabilization, transformation, or destruction of contaminants.

Attenuation mechanisms for inorganic constituents, like molybdenum and arsenic, can be physical and/or chemical. Physical methods include dilution, dispersion, and related processes. Chemical mechanisms for inorganic constituents include adsorption to oxyhydroxides of iron, aluminum, manganese, and other metals, and coprecipitation with common minerals such as iron sulfides or carbonates.

USEPA guidance for MNA outlines an evaluation of the potential for successful remediation for each constituent of interest, by the following tiered approach:

- Tier 1: Assessment of groundwater plume stability and constituent attenuation based on statistical analysis and geochemical testing.

- Tier 2: Identification of the attenuation mechanisms occurring at each location and estimation of the timeframe required for attenuation based on site-specific groundwater and aquifer solids characterization data, including sequential extraction data.
- Tier 3: Assessment of capacity in the aquifer system to attenuate the plume and confirmation of long-term plume stability through geochemical modeling.
- Tier 4: Design of an MNA performance monitoring program to demonstrate that MNA is progressing as predicted, verify plume stability, identify toxic and/or mobile transformation products (if any), optimize monitoring well locations, and verify attainment of MNA remediation objectives.

A successful MNA approach requires a good understanding of hydrogeologic conditions and long-term monitoring of site conditions. MNA is a relatively slow remedy when used in isolation. As such, MNA is frequently used in combination with other remedies, including source control.

MNA can be enhanced using low-energy, in-situ techniques to stimulate or increase the attenuation of contaminants or reduce contaminant loading. Options for MNA enhancements include increasing the attenuation capacity of the aquifer, decreasing the mobility of contaminants, and/or increasing the stability of immobilized contaminants (ITRC 2010).

MNA and/or enhanced MNA are potentially effective means of remediating molybdenum and arsenic downgradient of the Bottom Ash Impoundment. The effectiveness of an MNA approach is dependent on site-specific conditions. Further geochemical evaluation and groundwater modeling is required to evaluate remedial timeframes. Table 3 includes a comparison of MNA and enhanced MNA to the requirements of 40 CFR 257.96(c) and NDAC 33.1-20-08-06(6)(c).

MNA is being evaluated as a potential option for remediating arsenic identified in one of the downgradient wells at the adjacent Bottom Ash Landfill (Figure 1). Site-specific geochemical testing was conducted and MNA Tier 1, 2 and 3 evaluations have been completed (WSP 2023; WSP 2024). The Tier 1, 2, and 3 MNA evaluations indicated that attenuation of arsenic is occurring downgradient of the Bottom Ash Landfill, that there is adequate capacity to attenuate arsenic, and that the attenuated arsenic is modeled to be stable. Based on these findings, geochemical testing is being done and a Tier 1 MNA evaluation will be pursued to identify if MNA is a suitable remedy for attenuating arsenic and molybdenum given the downgradient conditions at the Bottom Ash Impoundment.

5.3.2 Hydraulic Containment (Groundwater Pump and Treat)

Hydraulic containment can be used to control potential hazards through reduction of risk exposure pathways. Pump and treat is one form of hydraulic containment. Pump and treat refers to the use of groundwater extraction to artificially induce a hydraulic gradient for capture or control of the migration of impacted groundwater is considered as a viable remedial technology at many sites (USEPA 1996). A pump and treat approach uses extraction wells, subsurface drains, or trenches to capture groundwater, which then may require above-ground treatment and permitted discharge to a receiving water body or reinjection into the aquifer, depending on the site conditions and regulatory requirements. A pump and treat approach may also be coupled with vertical barrier walls to more effectively direct water to the wells.

Extraction technologies are more efficient for mobile constituents which are not readily attenuated by other mechanisms such as precipitation or adsorption. As such, given the chemical behavior of both arsenic and molybdenum and site hydrogeologic heterogeneity, the technical feasibility of achieving the site GWPS for the required parameters using pump and treat as the sole corrective measure is uncertain. Bench-scale and/or pilot-

scale testing would be necessary for different treatment technologies to determine the potential to remove both parameters from the site groundwater. Table 3 includes a comparison of hydraulic containment (groundwater pump and treat) to the requirements of 40 CFR 257.96(c) and NDAC 33.1-20-08-06(6)(c).

Based on previously completed review of hydraulic containment for the nearby Bottom Ash Landfill, hydraulic containment may not be further evaluated as a stand-alone remedy for the Bottom Ash Impoundment. Pump and treat extraction technologies tend to be more efficient for constituents that are not readily attenuated by mechanisms such as adsorption, making the application less efficient for the extraction of arsenic. If this alternative is considered further, additional chemical testing, similar to that for in situ injection, is necessary to determine the extraction potential for arsenic and molybdenum with different treatment technologies given the site-specific conditions.

5.3.3 Geochemical Approaches (In Situ Injection)

Subsurface in situ injections of reagents are a remediation technology that can be used for inorganic constituents. In situ injections for inorganic constituents rely on three mechanisms that influence solubility, mobility, and/or toxicity of inorganic constituents:

i) Oxidation-reduction potential (redox) manipulation

ii) Adsorption to aluminum, iron oxyhydroxides, or other metal oxyhydroxides, or various sulfate compounds under oxidizing groundwater conditions

iii) Adsorption to, or coprecipitation with, iron or other metal sulfides under reducing conditions

In-situ injection requires understanding the subsurface transport characteristics and (geo)chemical characteristics of the aquifer, and a thorough understanding of the reaction kinetics to derive appropriate reagent. Often this technology is bench tested and field-evaluated in a relatively small area (i.e., pilot tested) to bolster the understanding of these factors prior to remedial selection, design, and implementation.

Arsenic and molybdenum can be immobilized under different combinations of pH and redox conditions. A variety of pH and/or redox-altering technologies are available which can incorporate biological processes, chemical oxidants and reductants, and/or mechanical processes such as air sparging. These processes can be used to decrease the mobility of these constituents.

Chemical injection can be utilized to alter groundwater conditions to reduce metal mobility. Reactive chemicals can be introduced into soil and groundwater to trigger rapid and complete metal precipitation. This may involve pH adjustment to higher levels while maintaining adequate buffering capacity within the groundwater to limit the upper extent of the pH range, as solubility increases with higher pH for both arsenic and molybdenum.

Following implementation of chemical injection as a corrective measure, routine collection of additional data, including measurements of total alkalinity and ongoing measurement of pH, is necessary for ensuring that conditions remain favorable for precipitation of the contaminants of concern.

Table 3 includes a comparison of in situ injection to the requirements of 40 CFR 257.96(c) and NDAC 33.1-20-08-06(6)(c).

Chemical injection is currently being evaluated as a potential option for remediating arsenic identified in one of the downgradient wells at the adjacent Bottom Ash Landfill (Figure 1). Initial testing using site specific groundwater and aquifer solids and associated modeling suggest that injection of iron particles upgradient of the well of interest

could increase the quantity of sorption sites, in turn reducing arsenic concentrations in groundwater downgradient of the injection locations (WSP 2025a). Bench-scale testing of alternatives at the Bottom Ash Landfill is ongoing (WSP 2025b). Based on these initial findings from the adjacent Bottom Ash Landfill, chemical injection may also be a viable option for remediating arsenic and molybdenum at the Bottom Ash Impoundment.

5.3.4 Permeable Reactive Barriers

Permeable reactive barriers (PRBs) typically involve the installation of a subsurface zone of material intended to remove constituents of interest as groundwater flows through the PRBs. PRBs can be installed in downgradient locations using conventional excavation methods or a one-pass trenching method. Excavated trenches are backfilled with reactive media to create a zone that interacts with constituents as they passively flow through the PRB in the direction of groundwater flow (ITRC 2011). PRB systems can be constructed as continuous “walls” or as “funnel-and-gate” systems where impermeable slurry walls create a “funnel” that directs groundwater to permeable “treatment gates” filled with reactive materials. Funnel-and-gate configurations can reduce the required treatment area, allowing the system to be more readily maintained. Funnel-and-gate configurations can also address issues with groundwater flow circumvention of the PRB that have been identified in more typical wall configurations. PRBs are typically keyed into an underlying low-permeability unit to minimize preferential flow under the installed barrier.

PRBs may present a viable alternative for in-situ treatment of arsenic and molybdenum under certain conditions. PRBs are often constructed of reactive materials such as zero valent iron (ZVI), zeolites, and granular activated carbon. Zeolites can be used to promote ionic exchange and/or sorption, while activated carbon can be used to induce and/or sustain reducing conditions within an aquifer. Constituents of interest interact with the reactive materials via precipitation or sorption, dependent on the chemical properties of both the chosen reactive material and the constituents of interest. While installation of a PRB could work for stabilization of the constituents of concern, materials used for PRB construction can increase the mobility of non-target metals within the aquifer based on interaction with the amendments. Pilot testing would be required to determine the effectiveness and potential for secondary impacts to groundwater chemistry based on the addition of the PRB amendments to the aquifer.

Table 3 includes a comparison of PRBs to the requirements of 40 CFR 257.96(c) and NDAC 33.1-20-08-06(6)(c).

PRBs may not be further evaluated at the Bottom Ash Impoundment due to uncertainty in the ability to be keyed into a competent bedrock layer. Critically, for a PRB to be effective, the barrier should ideally “extend to and be keyed into a competent bedrock layer or aquitard” to prevent circumvention of groundwater around the installed barrier (ITRC 2011). Downgradient of the Bottom Ash Impoundment, a continuous competent bedrock layer has not been identified in close proximity to the uppermost water-bearing zone.

5.3.5 Phytoremediation

Phytoremediation uses plants to degrade, immobilize, or contain constituents of interest in soil, groundwater, surface water, and sediments. Phytoremediation includes plant-based technologies and applications for hydraulic control, nutrient management, sediment control, and slope stabilization (Goldemund and Gestler 2019). Phytoremediation can be a viable alternative for areas with relatively low levels of constituents in shallow soils or groundwater.

The Interstate Technology and Regulatory Council (ITRC 2009) lists the main mechanisms involved in the phytoremediation for inorganic constituents as:

- Phytosequestration, or the ability of plants to sequester constituents within the rhizosphere, an area a few millimeters from the root surface. Phytosequestration is considered a containment mechanism.
- Phytohydraulics, or the ability of plants to capture and evaporate water. Phytohydraulics provides hydraulic control of the groundwater plume through plant root uptake and is considered a containment mechanism.
- Phytoextraction, or the process of constituent uptake into a plant. Phytoextraction is remediation through removal of the constituent of interest.

Typically, a combination of phytoremediation mechanisms acts in concert in successful phytoremediation applications for inorganic constituents such as arsenic and molybdenum.

The effectiveness of groundwater remediation using traditional phytoremediation approaches can be limited by compacted soil conditions that impede root penetration and depths to targeted groundwater. Depending on plant type, many root systems for plants used in traditional phytoremediation approaches focus on the upper 1 to 2 feet from the ground surface (ITRC 2011), while groundwater downgradient of the Bottom Ash Impoundment is approximately 5 to 10 feet below the ground surface. In addition to traditional phytoremediation approaches, engineered approaches such as the TreeWell® System, a proprietary system developed by Applied Natural Sciences, can be used to bypass the constraints of a traditional system, through promoting downward root growth, encouraging constituent treatment and focusing groundwater extraction from a target depth within the aquifer (Gatliff et al. 2016; Goldemund and Gestler 2019).

Table 3 includes a comparison of phytoremediation to the requirements of 40 CFR 257.96(c) and NDAC 33.1-20-08-06(6)(c). Phytoremediation may not be further evaluated as a corrective measure for the Bottom Ash Impoundment due to the groundwater depth in the area of concern being deeper than can typically be affected by phytoremediation.

6.0 NEXT STEPS/REMEDY SELECTION

The purpose of this ACM is to analyze the effectiveness of potential corrective measure(s) for groundwater using the criteria outlined in 40 CFR 257.96 and NDAC 33.1-20-08-06(5).

For source control, the engineered soil cover over the Bottom Ash Impoundment as well as ongoing leachate removal through the existing sump are source control corrective measures previously and currently implemented prior to assessment monitoring or the ACM. If over the course of corrective action implementation and monitoring, the previously implemented source control measures are determined to be inadequate, additional source control measures may be evaluated and implemented.

For groundwater remediation, several potential corrective measures have been evaluated and may be viable for remediation of arsenic and molybdenum downgradient of the Bottom Ash Impoundment. Additional information will be gathered to further evaluate the potential corrective measures and determine which option(s) should be implemented at the Bottom Ash Impoundment. The following sections present the additional data gathering, schedule, reporting, and next steps that will support remedy selection and corrective action implementation. The items discussed below are focused on those actions planned for the next approximately three months (until the 2025 Annual Coal Combustion Residuals Groundwater Monitoring and Corrective Action Report, due in January 2026).

6.1 Additional Data Gathering

Collection and evaluation of additional data are necessary to refine the conceptual site model, further characterize the nature and extent of groundwater impacts, and to further evaluate the feasibility and effectiveness of potential corrective measures described in this document such that an appropriate groundwater corrective measure or combination of corrective measures may be selected and implemented.

6.1.1 Continuing Nature and Extent Investigation

As discussed in Section 4.0, new and existing monitoring wells will be used to help define the extents of arsenic and molybdenum above the GWPS. Dedicated low-flow pumps are scheduled to be installed in the new nature and extent wells in late September or early October 2025. Following installation of the dedicated low-flow pumps, Q4 2025 groundwater samples will be collected from both the existing program wells and the newly installed nature and extent wells. Data from both the network wells and the newly installed nature and extent wells will be evaluated to define the extents of elevated arsenic and molybdenum following receipt of the Q4 2025 groundwater data.

6.1.2 Geochemistry Evaluation

As discussed in Section 4.1.5, solids samples were collected at the installed well locations and sent for analysis by SGS Canada Inc. Samples are being analyzed using SEP (Tessier et al. 1979) and XRD including clay speciation. Results of the associated analysis have not yet been received and will be included in future submittals. Following receipt and review of the geochemical analysis, a site-specific geochemical evaluation, including a Tier 1 MNA evaluation as described in Section 5.3.1, will be initiated to determine the attenuation capacity and stability of the aquifer materials and potential attenuation mechanisms within the aquifer for arsenic and molybdenum. The capacity and available mechanisms of the aquifer to attenuate arsenic and molybdenum will impact the effectiveness potential remedies, including MNA, enhanced MNA, in situ injection, or the implementation and installation of a PRB.

6.2 Schedule and Reporting

Per NDAC 33.1-20-08-06(6)(d), this ACM report will be provided to the NDDEQ for review and approval. The ACM will be placed in the facility's operating record in accordance with 40 CFR 257.96(d) and NDAC 33.1-20-08-06(6)(d). Following finalization of the ACM, the 2025 Annual Groundwater Monitoring and Corrective Action Report is due January 31, 2026. As required in 40 CFR 257.96(a) and NDAC 33.1-20-08-06(6)(a), a copy of this ACM and the certification of the ACM by a qualified professional engineer licensed in the state of North Dakota will be included within the Annual Report. The Annual Report will also include discussion of actions taken between finalization of this ACM and the end of 2025. A semi-annual report will be prepared describing the progress to select and design a remedy, per 40 CFR 257.97(a) and NDAC 33.1-20-08-06(7)(a). The first semi-annual report will be completed by July 31, 2026.

Remedy selection will occur as soon as feasible. Selection of a final remedy depends on a thorough evaluation and testing of the corrective action options to confirm the selected options are effective. Selected corrective actions must meet the standards described in Section 5.1.

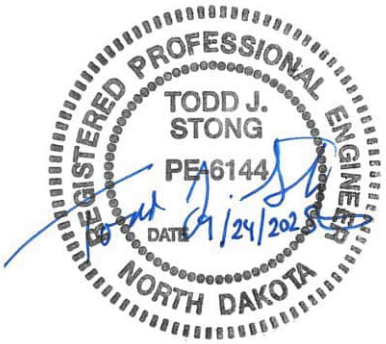
A schedule for items anticipated to be completed by the end of 2025 for inclusion in the 2025 annual report due in January 2026 is included below:

Task Description	Estimated Completion Date
■ Dedicated Low-Flow Pump Installation	Sep-Oct 2025
■ Groundwater Sampling	Oct-Dec 2025
■ Geochemistry Lab Results and Evaluation (initiate Tier I MNA Evaluation)	Oct-Dec 2025
■ 2025 Annual Groundwater Monitoring and Corrective Action Report	Jan 2026

Prior to final selection of a corrective measure, a public meeting to present the results of the corrective measures assessment will be held a minimum of 30 days before the final selection of the remedy. Upon selection of a remedy, a final report will be prepared describing the selected remedy and how the remedy meets the standards described in Section 5.1. The final remedy selection report must be certified by a qualified professional engineer licensed in the state of North Dakota per 40 CFR 257.97(a) and approved by the NDDEQ per NDAC 33.1-20-08-06(7)(a). Once the remedy has been selected and approved by the NDDEQ, the implementation of the remedy will be initiated in accordance with 40 CFR 257.98 and NDAC 33.1-20-08-06(8).

Certification

This Assessment of Corrective Measures has been prepared in compliance with applicable requirements of the Federal CCR Rule (40 CFR 257.96) and NDDEQ CCR Rule (NDAC 33.1-20-08)



WSP USA Inc.

Erin L. Hunter, PhD
Senior Lead Consultant

Todd J. Stong, PE
Director

ELH/TJS/kg

I certify to the best of my knowledge, information, and belief that this ACM for molybdenum and arsenic at the Bottom Ash Impoundment meets the applicable requirements of 40 CFR Part 257.96 and NDAC 33.1-20-08.

Table 2: Source Control Corrective Measures Comparison

Corrective Measure	Performance	Reliability	Ease of Implementation	Potential Impacts	Time to Begin and Complete	Permitting / Institutional Requirements	Other Environmental or Public Health Requirements
Closure In-Place with Cover	Performance is reliant on not having significant sustained interaction with groundwater and placed CCR, and the final cover being an engineered cover designed to minimize the potential for precipitation to infiltrate through the cover and into	Reliability of closure in-place with a cover is dependent on the continued performance of the cover system during the post-closure period, and groundwater not rising to the point of significant interaction with the CCR.	Implementation was completed in 2020. However, detailed design was required, along with permit updates with the NDDEQ. Implementation required extensive earthworks construction for reducing the footprint and	Failure of the cover system could allow more infiltration through the CCR than desired.	Begun in 2019 and completed in 2020 prior to initiating assessment monitoring or the assessment of corrective measures.	Previously permitted and approved by the NDDEQ. Deed restrictions have previously been placed based on the current site closure configuration.	Prior to completion, construction disruptions occurred. Little to no additional disruptions are anticipated unless changes are made to the existing closed in place footprint of the impoundment.
Lechate Removal (existing sump)	Performance is connected to a reduction in the hydraulic head on the composite liner system of the impoundment. As leachate is removed, the head on the liner is reduced, and the potential leakage rate through defects is subsequently reduced.	System is relatively reliable but can stop pumping if issues arise with power source, level alarms, the pump or the holding tank. Online monitoring allows for quick identification of issues.	Initial implementation began in 2020 with installation of the sump, with a dedicated pump and holding tank installed in 2025. Operations require monitoring of the pump and the tank, and coordination of transfer trucks to haul leachate for	A release of leachate could occur if the holding tank, its additional containment, or the transfer trucks failed.	Leachate removal from the sump began in 2020 during closure construction and will continue through the 30-year post-closure period as required as leachate accumulates in the sump.	Dedicated pump and holding tank design were reviewed by NDDEQ. Secondary containment is required for all piping and tanks outside the lined cover.	Offsite disposal of leachate required or alternative permitting necessary.
Increased Leachate Removal (dewatering wells)	Building upon the existing leachate removal system, increased leachate removal will more quickly reduce the head on the liner and thus more quickly reduce the potential leakage rate through defects.	Similar reliability as the existing system.	Moderate. Requires installation of additional infrastructure (additional wells for dewatering). Modeling may be required to optimize installation based on site-specific conditions.	Inaccurate drilling of additional well points through the existing cover system could lead to increased infiltration within the impoundment or create conduits through the liner system.	Design, regulatory approval, installation and commissioning may take 6-12 months. Once implemented, dewatering would continue through the 30-year post-closure period as required (as leachate accumulates at the wells).	Will require approval from the NDDEQ for the composite cover penetrations and drilling into the impoundment.	Offsite disposal of leachate required or alternative permitting necessary.
Closure by Removal	Closure by removal removes the source and eliminates the potential for future contamination to occur due to failure of the cover and liner systems.	Reliability for closure by removal is dependent on complete removal of source material and impacted material.	In order to implement closure by removal, a new landfill would need to be designed, permitted by the NDDEQ, and constructed prior to removal of material from the existing impoundment footprint.	Increase in overall risk to workers, surrounding community and the environment due to factors such as fugitive dust, heavy construction equipment operation and emissions, and potential spills and safety hazards associated with transport to the new site.	Time to begin is constrained by the need to investigate a site, design, permit, and construct a new CCR landfill, which can take upwards of 2 years. Construction of a new landfill is required prior to removal of material from the existing impoundment, which may take an additional 6 to 12 months based on the current volume of CCR.	A new landfill permit will be required.	Significant disruptions will be made to the current site configuration, along with significant construction activity for developing a new landfill, removing CCR, and hauling CCR to the new landfill.

Notes:

Permeable Reactive Barriers (PRBs)	PRBs may have a limited reactive lifespan, dependent in part on the characteristics of the aquifer and the chosen reactive material. Without replacement of the reactive material within the PRB, extended performance of the corrective measure may not be possible. Additional testing may be required to select an appropriate sorptive media. PRBs also require vertical installation to key into low permeability zones and horizontal extents wide enough to prevent impacted groundwater from going around and/or under the PRB.	PRBs are a reliable corrective measure, but loss of reactivity over time may require re-installation depending on the length of time to reach the required GWPS. Reliability may be improved based on the ease of access to intercept the flow of groundwater. Additional data collection, may be needed to characterize the attenuation mechanisms present within the aquifer and select an appropriate reactive media.	Implementation is moderate to difficult. Based on differentiation of the stratigraphic units, may require additional drilling for confirmation of an appropriate confining unit for constraining hydraulic movement. Trenching is necessary for installation.	Dependent on the materials used for PRB, mobilization of additional constituents may occur based on changing conditions within the aquifer. Short-term impacts may occur during construction of the PRB, but can be mitigated through appropriate planning. Positive impacts include reduction in the volume, mobility, or toxicity of the constituent of interest through precipitation within the reactive media.	Installation of a PRB can be accomplished in roughly 1 year, depending on the final location and configuration. Bench- and/or pilot-scale testing would be necessary prior to design and construction of the remedy, which may take up to 2 years.	Deed restrictions have previously been placed based on site closure. No other institutional requirements are anticipated.	Following installation, PRBs are a passive remedy. Certain treatment media have the potential to mobilize additional naturally-occurring constituents downgradient of the PRB.
Phytoremediation	Once established, phytoremediation can effectively provide hydraulic containment, and provide potential reduction of constituents of interest through immobilization, uptake, and/or sequestration within the biomass. It may take between 3 and 5 years following planting for the system to begin performing. Phytoremediation may be limited by site climate	When implemented as an engineered system, phytoremediation must account for the characteristics of the aquifer, including the hydraulic conductivity, flow velocity, depth to impacted groundwater, and other factors. Reliability is dependent on careful design of the system.	Implementation is easy to moderate. Trees must be installed to appropriate depths to intercept impacted groundwater. Once established, trees are self-maintaining with no required external energy requirements and little maintenance.	Minimal anticipated negative impacts. Positive impacts include enhanced aesthetics, additional wildlife habitat, and minimal energy usage.	Optimization via groundwater modeling is required, which may take between 6 and 9 months. Installation is relatively short and can be substantially completed within a few months. Hydraulic control may take between 3 and 5 years following planting, but system performance is anticipated to improve over time.	Deed restrictions have previously been placed based on site closure. No other institutional requirements are anticipated.	None anticipated. Following installation, remedy is passive and does not require external energy.

Notes:

Table 3: Groundwater Remediation Corrective Measures Comparison

Corrective Measure	Performance	Reliability	Ease of Implementation	Potential Impacts	Time to Begin and Complete	Permitting / Institutional Requirements	Other Environmental or Public Health Requirements
Monitored Natural Attenuation and Enhanced Monitored Natural Attenuation	Assuming available capacity, MNA can provide continued effective performance in reducing constituent concentrations.	Reliability is dependent on aquifer conditions that favor arsenic and molybdenum attenuation or can be enhanced, and that sufficient attenuation capacity exists within the aquifer. MNA is reliable and can either be used as a stand-alone corrective measure for groundwater impacted by molybdenum and arsenic, or in combination with other technologies.	Little to no effort required for physical implementation of standard MNA, but moderate to complex effort required to fully and accurately implement, monitor, and document as a corrective measure. Enhanced MNA may require additional installation requirements, including well installation. Additional data is needed to demonstrate that the aquifer has sufficient attenuation capacity to meet the stated site objectives within a reasonable time frame.	No known impacts. MNA relies on the natural processes and existing geologic materials within the aquifer to reduce constituent concentrations, toxicity, and mobility without disturbing the installed cover or subsurface materials.	Evaluation for MNA can begin immediately, but substantial completion of evaluation and demonstration of attenuation mechanisms may require mulitple years. Long-term monitoring and reporting are likely required.	No additional requirements, as deed restrictions have previously been placed due to site closure.	Little to no physical disruption to remediation areas and no adverse construction impacts are expected.
Hydraulic Containment (Groundwater Pump and Treat)	Pump and treat can effectively provide hydraulic control throughout the operational life of the system. Performance is contingent on routine groundwater assessment throughout the pumping process, and may not be quickly effective. Performance is additionally predicated on disposal of treated water and/or waste treatment sludge. Pump and treat can be less effective for inorganic compounds, like molybdenum and arsenic.	Generally reliable for hydraulic control of the groundwater plume and migration of contaminants of interest.	Implementation is moderate, because although this is a proven approach, the site is unmanned, making implementation more difficult. Additional extraction wells and trenches would need to be installed.	Potential impacts are related to the operation of an on-site, above-ground water treatment facility and associated infrastructure for treatment and conveyance of impacted groundwater. Pumping may unintentionally alter geochemistry of the aquifer, in addition to the intended alteration of hydraulic flow pathways.	Extraction wells and trenches can be installed relatively quickly (generally within 6 to 12 months), but additional aquifer testing, overall system design, installation, and optimization, and permit approvals may be required, with lead times up to 2 years. Time for construction of any water treatment components may be variable depending on the scale of the chosen treatment process. Treatment timeline may extend for multiple years.	Depending on the effluent management strategy, a groundwater extraction permit and/or a NPDES discharge permit may be required, or an underground injection control (UIC) permit may be required if groundwater reinjection is chosen. Deed restrictions have previously been enacted based on site closure.	Above ground treatment components may be required for extended periods of time, resulting in waste residuals requiring management and disposal.

Geochemical Approaches (In-Situ Injection)	In-situ injection can rapidly alter aquifer conditions, resulting in geochemical immobilization of constituents of concern. Continued monitoring is required to ensure that aquifer conditions remain favorable for containing constituents of interest while not resulting in mobilization of other metals.	Approach is reliable if injected materials can be evenly distributed throughout the aquifer, permeability of the aquifer materials is adequate to allow for distribution, and available volume of appropriate receptors exists within the aquifer.	Moderate. May require installation of additional infrastructure for injection (additional wells for injection or other means of injection). Bench and pilot testing are required to optimize implementation.	Minimal negative impacts are anticipated if the remedy works as designed. Additional constituents may be mobilized as an unintended consequence if appropriate steps are not taken prior to remedy implementation.	Optimization via bench-scale and pilot testing is required prior to implementation, and may require up to 2 years. Additional wells can be installed relatively quickly following pilot testing. Completion time would be variable based on attenuation mechanisms within the aquifer and distribution of injected materials within the treatment area.	An underground injection control (UIC) permit may be required for in-situ injections in order to implement this corrective measure. Deed restrictions have previously been enacted based on site closure.	None anticipated. Potential for mobilization of additional redox-sensitive components. Remedy is passive following installation.
Permeable Reactive Barriers (PRBs)	PRBs may have a limited reactive lifespan, dependent in part on the characteristics of the aquifer and the chosen reactive material. Without replacement of the reactive material within the PRB, extended performance of the corrective measure may not be possible. Additional testing may be required to select an appropriate sorptive media. PRBs also require vertical installation to key into low permeability zones and horizontal extents wide enough to prevent impacted groundwater from going around and/or under the PRB.	PRBs are a reliable corrective measure, but loss of reactivity over time may require re-installation depending on the length of time to reach the required GWPS. Reliability may be improved based on the ease of access to intercept the flow of groundwater. Additional data collection, may be needed to characterize the attenuation mechanisms present within the aquifer and select an appropriate reactive media.	Implementation is moderate to difficult. Based on differentiation of the stratigraphic units, may require additional drilling for confirmation of an appropriate confining unit for constraining hydraulic movement. Trenching is necessary for installation.	Dependent on the materials used for PRB, mobilization of additional constituents may occur based on changing conditions within the aquifer. Short-term impacts may occur during construction of the PRB, but can be mitigated through appropriate planning. Positive impacts include reduction in the volume, mobility, or toxicity of the constituent of interest through precipitation within the reactive media.	Installation of a PRB can be accomplished in roughly 1 year, depending on the final location and configuration. Bench- and/or pilot-scale testing would be necessary prior to design and construction of the remedy, which may take up to 2 years.	Deed restrictions have previously been placed based on site closure. No other institutional requirements are anticipated.	Following installation, PRBs are a passive remedy. Certain treatment media have the potential to mobilize additional naturally-occurring constituents downgradient of the PRB.
Phytoremediation	Once established, phytoremediation can effectively provide hydraulic containment, and provide potential reduction of constituents of interest through immobilization, uptake, and/or sequestration within the biomass. It may take between 3 and 5 years following planting for the system to begin performing. Phytoremediation may be limited by site climate conditions and depth to groundwater.	When implemented as an engineered system, phytoremediation must account for the characteristics of the aquifer, including the hydraulic conductivity, flow velocity, depth to impacted groundwater, and other factors. Reliability is dependent on careful design of the system.	Implementation is easy to moderate. Trees must be installed to appropriate depths to intercept impacted groundwater. Once established, trees are self-maintaining with no required external energy requirements and little maintenance.	Minimal anticipated negative impacts. Positive impacts include enhanced aesthetics, additional wildlife habitat, and minimal energy usage.	Optimization via groundwater modeling is required, which may take between 6 and 9 months. Installation is relatively short and can be substantially completed within a few months. Hydraulic control may take between 3 and 5 years following planting, but system performance is anticipated to improve over time.	Deed restrictions have previously been placed based on site closure. No other institutional requirements are anticipated.	None anticipated. Following installation, remedy is passive and does not require external energy.

PROJECT DESCRIPTION

THE SOUTH CELL ISOLATION AND SUMP CONSTRUCTION PROJECT CONSISTS OF CLEANING OUT EXISTING COAL COMBUSTION RESIDUALS (CCRS) WITHIN THE CONCRETE OUTLET STRUCTURE NEAR THE NORTHWEST CORNER OF THE SOUTH CELL OF THE BOTTOM ASH IMPOUNDMENT, CLEANING OUT AND FILLING THE CROSS-OVER PIPELINE BETWEEN THE CENTER AND SOUTH CELL WITH PRESSURIZED GROUT, CONSTRUCTING A SUMP WITHIN THE EXISTING CONCRETE STRUCTURE IN THE SOUTH CELL, AND PLACING BOTTOM ASH PROTECTIVE COVER OVER GEOMEMBRANE-LINED PORTIONS OF THE SOUTH CELL OF THE BOTTOM ASH IMPOUNDMENT. THE SOUTH CELL OF THE BOTTOM ASH IMPOUNDMENT AT STANTON STATION IS SOUTH OF THE ORIGINAL FOOTPRINT OF STANTON STATION NORTH OF HIGHWAY 200A IN MERCER COUNTY.

GENERAL NOTES AND SPECIFICATIONS

1. ALL GRE AND OSHA HEALTH AND SAFETY REQUIREMENTS SHALL BE FOLLOWED DURING EXECUTION OF THE WORK. GRE PROCEDURES SHALL BE USED FOR ALL EXCAVATIONS, HOT WORK, AND LOCK-OUT/TAG-OUT. ALL CONTRACTOR EMPLOYEES SHALL ATTEND THE GRE CONTRACTOR SAFETY ORIENTATION.
2. THE CONTRACTOR SHALL PROVIDE ALL NECESSARY SAFETY EQUIPMENT AND PROVIDE ACCESS FOR THE OWNER'S REPRESENTATIVE TO INSPECT THE WORK. INSPECTION ACCESS IS REQUIRED THROUGHOUT THE DURATION OF THE PROJECT.
3. FOR THIS WORK, GREAT RIVER ENERGY IS THE OWNER. THE COMPANY BIDDING ON THE WORK IS THE CONTRACTOR.
4. CONTRACTOR IS RESPONSIBLE FOR LOCATING AND PROTECTING ALL EXISTING UTILITIES LOCATED IN AND AROUND THE WORK AREA (INCLUDING MONITORING WELLS AND PIEZOMETERS) AND SHALL EXERCISE CARE WHEN WORKING NEAR THESE UTILITIES. IF ANY UNEXPECTED UTILITIES ARE LOCATED WHILE PERFORMING THE WORK, THE CONTRACTOR SHALL STOP WORK IMMEDIATELY AND INFORM THE OWNER'S REPRESENTATIVE.
5. EXISTING UTILITIES ARE ONLY SHOWN IN THE AREA NEAR THE BOTTOM ASH IMPOUNDMENT AND BOTTOM ASH LANDFILL AND LOCATIONS OF EXISTING UTILITIES ARE APPROXIMATE. ABOVE-GRADE UTILITIES OR EQUIPMENT MAY BE PRESENT AND CONTRACTOR SHALL INFORM OWNER OF CONFLICTS WITH THESE UTILITIES OR EQUIPMENT.
6. CONTRACTOR SHALL VERIFY ALL DIMENSIONS, ELEVATIONS, AND SITE CONDITIONS PRIOR TO STARTING WORK, AND SHALL NOTIFY THE OWNER'S REPRESENTATIVE IF CONFLICTS EXIST ON THE DRAWINGS.
7. LOCATIONS AND DIMENSIONS OF EXISTING STRUCTURES ARE BASED ON DRAWINGS PROVIDED BY GRE AND SHOULD BE FIELD-VERIFIED.
8. CONTRACTOR IS RESPONSIBLE FOR SURVEY CONTROL AND FOR RECORD-KEEPING REQUIRED TO PRODUCE AS-BUILT DRAWINGS.
9. CONTRACTOR SHALL PERFORM HOUSEKEEPING DUTIES ON A DAILY BASIS TO KEEP WORK AREAS CLEAN. HOUSEKEEPING SHALL BE PERFORMED AT THE COMPLETION OF THE WORK TO THE SATISFACTION OF THE OWNER.
10. TEMPORARY EXCAVATIONS SHALL BE COMPLETED AT MAXIMUM SLOPES FOLLOWING GRE AND OSHA REQUIREMENTS.
11. ALL WORK COMPLETED IN AND AROUND THE BOTTOM ASH IMPOUNDMENT AND BOTTOM ASH LANDFILL SHALL BE COORDINATED WITH GRE. ACCESS ROUTES TO THE WORK AREA SHALL BE APPROVED BY THE OWNER PRIOR TO USE. IF ACCESS IS GIVEN VIA THE SOUTH ENTRANCE GATE, CONTRACTOR SHALL USE CARE WHEN ENTERING AND EXITING HIGHWAY 200A AND SHALL INFORM GRE EACH DAY WHEN ARRIVING OR DEPARTING THE SITE.
12. BOTTOM ASH PROTECTIVE COVER SHALL BE PLACED ON ALL AREAS OF EXPOSED GEOMEMBRANE. PROTECTIVE COVER OVER GEOMEMBRANE SIDE SLOPES SHALL BE A MINIMUM OF 3 FEET THICK.
13. BOTTOM ASH PROTECTIVE COVER SHALL BE BORROWED FROM THE CENTER OF THE SOUTH CELL OF THE BOTTOM ASH IMPOUNDMENT. IF SUFFICIENT BOTTOM ASH IS UNAVAILABLE WITHIN THE SOUTH CELL OF THE BOTTOM ASH IMPOUNDMENT, THE CONTRACTOR MAY BORROW ADDITIONAL BOTTOM ASH FROM THE BOTTOM ASH LANDFILL AFTER APPROVAL FROM THE OWNER'S REPRESENTATIVE.
14. PROTECTIVE COVER ON THE SIDE SLOPES SHALL BE PLACED FROM THE TOE OF THE SLOPE TOWARD THE CREST USING LOW GROUND PRESSURE EQUIPMENT. CONTRACTOR TO EVALUATE PLACEMENT CONDITIONS AS WORK PROGRESSES AND MAY MODIFY THE SLOPE OF BOTTOM ASH PLACED ON GEOMEMBRANE DEPENDING ON WORK CONDITIONS. MODIFICATIONS TO BOTTOM ASH PROTECTIVE COVER PLACEMENT SLOPES SHALL BE APPROVED BY OWNER PRIOR TO WORK BEING COMPLETED.
15. CONTRACTOR IS RESPONSIBLE FOR DAMAGE TO THE GEOMEMBRANE DURING CONSTRUCTION AND REPAIRS TO THE GEOMEMBRANE PRIOR TO DEMOBILIZING FROM SITE UNLESS AGREED TO OTHERWISE WITH THE OWNER.

GENERAL NOTES AND SPECIFICATIONS (CONTINUED)

16. IN-PLACE COAL COMBUSTION RESIDUALS IN THE BOTTOM ASH IMPOUNDMENT MAY BE SATURATED AND SOFT WITH LOW BEARING STRENGTH.
17. CONTRACTOR IS RESPONSIBLE FOR DEWATERING ACTIVITIES WITHIN THE SOUTH CELL AND CENTER CELL TO COMPLETE THE WORK TO THE LINES AND GRADES SHOWN ON THE DRAWINGS AND AS DESCRIBED IN BID DOCUMENTS. WATER FROM THE SOUTH CELL AND CENTER CELL MAY BE PUMPED TO THE NORTH CELL OR MANAGED IN THE CENTER CELL AS REQUIRED.
18. THE CONTRACTOR IS RESPONSIBLE FOR DUST CONTROL WITHIN THEIR WORK AREA, WHICH MAY INVOLVE USING A WATER TRUCK TO CONDITION BORROW AREAS, PLACEMENT AREAS, AND ACCESS ROADS.
19. THE SOURCE OF WATER USED FOR DUST CONTROL IS THE MISSOURI RIVER. ACCESS TO THE WATER SOURCE SHALL BE ALONG THE EXISTING ROAD TO THE STANTON STATION INTAKE STRUCTURE. CONTRACTOR SHALL CONFIRM THE PUMP SUCTION LOCATION WITH THE OWNER PRIOR TO USE AND IS RESPONSIBLE FOR MAINTAINING THE EXISTING GRAVEL ROAD TO THE WATER SOURCE DURING CONSTRUCTION.
20. THE CONTRACTOR IS RESPONSIBLE FOR CONSTRUCTING TEMPORARY ACCESS RAMPS/ROADS AS DETERMINED TO BE REQUIRED BY THE CONTRACTOR TO COMPLETE THE WORK.
21. THE CONTRACTOR IS RESPONSIBLE FOR ALL LABOR, EQUIPMENT, AND OTHER INCIDENTALS REQUIRED TO PERFORM THE WORK UNLESS OTHERWISE STATED IN THESE DRAWINGS OR THE BID DOCUMENTS.

CONSTRUCTION COORDINATION

1. DECONSTRUCTION ACTIVITIES NEAR THE FOOTPRINT OF THE ORIGINAL STANTON STATION SITE WILL BE TAKING PLACE NEAR THE BOTTOM ASH IMPOUNDMENT AND BOTTOM ASH LANDFILL DURING THIS WORK. THE CONTRACTOR SHALL BE AWARE OF WORK BEING DONE BY OTHERS AND SHALL COORDINATE CONTRACTOR'S SCHEDULE AND HAUL ROUTES TO COINCIDE WITH OTHER WORK.

SUBMITTAL(S)

1. A CRITICAL PATH OR BAR GRAPH TYPE SCHEDULE, PREPARED FOR EACH CONTRACT ITEM, SHALL BE SUBMITTED.
2. A WRITTEN WORK SAFETY PLAN DESCRIBING METHODS AND PRECAUTIONS TO BE TAKEN BY THE CONTRACTOR FOR SAFE PLACEMENT OF BOTTOM ASH SHALL BE SUBMITTED TO THE OWNER'S REPRESENTATIVE FOR APPROVAL PRIOR TO ANY WORK BEING COMPLETED.
3. A WORK PLAN DESCRIBING THE EQUIPMENT AND METHODS THAT THE CONTRACTOR INTENDS TO EMPLOY TO ACCOMPLISH WORK. THIS PLAN SHALL ALSO INCLUDE EQUIPMENT STAGING LOCATIONS.
4. ANY MATERIALS REQUIRED TO COMPLETE THE WORK, WHICH MAY INCLUDE, BUT NOT BE LIMITED TO, PIPING, PIPING APPURTENANCES AND COUPLERS, GROUT, PIPE GROUT PLUGS, DRAIN GRAVEL, AND GEOSYNTHETICS.

SCALE 1" = 50' 1/6 BOTTOM ASH PROTECTIVE COVER PLAN

SCALE N.T.S. C/6 WEST SLOPE SECTION (TYPICAL BOTTOM ASH PROTECTIVE COVER)

LEGEND

- 1715 — EXISTING GROUND TOPOGRAPHY (REFERENCE 2)
- 1715 — BOTTOM ASH PROTECTIVE COVER PLACEMENT ON SIDE SLOPES (NOTES 1, 2, 3, AND 4)

NOTES

1. BOTTOM ASH PROTECTIVE COVER SHALL BE PLACED ON ALL AREAS OF EXPOSED GEOMEMBRANE. PROTECTIVE COVER OVER GEOMEMBRANE SIDE SLOPES SHALL BE A MINIMUM OF 3 FEET THICK.
2. BOTTOM ASH PROTECTIVE COVER SHALL BE BORROWED FROM THE CENTER OF THE SOUTH CELL OF THE BOTTOM ASH IMPOUNDMENT. IF SUFFICIENT BOTTOM ASH IS UNAVAILABLE WITHIN THE SOUTH CELL OF THE BOTTOM ASH IMPOUNDMENT, THE CONTRACTOR MAY BORROW ADDITIONAL BOTTOM ASH FROM THE BOTTOM ASH LANDFILL AFTER APPROVAL FROM THE OWNER'S REPRESENTATIVE.
3. PROTECTIVE COVER ON THE SIDE SLOPES SHALL BE PLACED FROM THE TOE OF THE SLOPE TOWARD THE CREST USING LOW GROUND PRESSURE EQUIPMENT. CONTRACTOR TO EVALUATE PLACEMENT CONDITIONS AS WORK PROGRESSES AND MAY MODIFY THE SLOPE OF BOTTOM ASH PLACED ON GEOMEMBRANE DEPENDING ON WORK CONDITIONS. MODIFICATIONS TO BOTTOM ASH PROTECTIVE COVER PLACEMENT SLOPES SHALL BE APPROVED BY OWNER PRIOR TO WORK BEING COMPLETED.
4. CONTRACTOR IS RESPONSIBLE FOR DAMAGE TO THE GEOMEMBRANE DURING CONSTRUCTION AND REPAIRS TO THE GEOMEMBRANE PRIOR TO DEMOBILIZING FROM SITE UNLESS AGREED OTHERWISE WITH THE OWNER.
5. PROTECTIVE COVER OVER THE FLOOR OF THE GEOMEMBRANE SHALL BE A MINIMUM OF 4 FEET THICK OR TO A MINIMUM ELEVATION OF 1708 ft.
6. SOFT/SATURATED SEDIMENT CLEANED OUT FROM THE CROSS-OVER PIPELINE BETWEEN THE CENTER CELL AND THE SOUTH CELL AND FROM WITHIN THE CONCRETE STRUCTURES PRIOR TO CONSTRUCTION OF THE SUMP SHALL BE PLACED IN THE CENTER OF THE SOUTH CELL OF THE BOTTOM ASH IMPOUNDMENT AS APPROVED BY THE OWNER. SOFT/SATURATED SEDIMENT MAY BE STABILIZED AND BLENDED WITH EXISTING BOTTOM ASH WITHIN THE CELL TO PROVIDE A WORKABLE MATERIAL.
7. THE CONTRACTOR IS RESPONSIBLE FOR CONSTRUCTING TEMPORARY ACCESS RAMPS/ROADS AS DETERMINED TO BE REQUIRED BY THE CONTRACTOR TO COMPLETE THE WORK.
8. THE CONTRACTOR IS RESPONSIBLE FOR DEWATERING THE SOUTH CELL AND CENTER CELL TO COMPLETE THE WORK TO THE LINES AND GRADES SHOWN ON THE DRAWINGS AND AS DESCRIBED IN BID DOCUMENTS. WATER FROM THE SOUTH CELL AND CENTER CELL MAY BE PUMPED TO THE NORTH CELL OR MANAGED IN THE CENTER CELL AS REQUIRED TO ACCOMPLISH THE WORK.

IF THIS MEASUREMENT DOES NOT MATCH WHAT IS SHOWN, THE SHEET SIZE HAS BEEN MODIFIED FROM: ANSI D

PROJECT DESCRIPTION

THE SOUTH CELL CLOSURE CONSTRUCTION SCOPE OF WORK CONSISTS OF REGRADING IN-PLACE AND COAL COMBUSTION RESIDUALS AND OTHER WASTE MATERIALS PLACED WITHIN THE SOUTH CELL IMPOUNDMENT TO BETWEEN 3% AND 15% GRADES. PLACING GEOSYNTHETIC CLAY LINER, GEOMEMBRANE, GROWTH MEDIUM, AND TOPSOIL AS REQUIRED TO COVER THE IMPOUNDMENT AND DIRECT SURFACE WATER OFF THE FINAL COVERED FACILITY.

SOUTH CELL CLOSURE GENERAL NOTES AND SPECIFICATIONS

1. COAL COMBUSTION RESIDUALS, COAL, AND OTHER SOIL-LIKE MATERIALS DEPOSITED IN THE SOUTH CELL SHALL BE PLACED AND COMPACTED TO PRODUCE A FIRM AND UNYIELDING TOP OF WASTE SURFACE. THESE MATERIALS SHALL BE MOISTURE-CONDITIONED DURING PLACEMENT.

2. THE WATER WITHIN THE SOUTH CELL SHALL NOT BE DISCHARGED BY THE CONTRACTOR. ONLY THE OWNER CAN REMOVE THIS WATER. THE CONTRACTOR IS RESPONSIBLE FOR NOTIFYING THE OWNER'S REPRESENTATIVE WHEN CONTACT WATER NEEDS TO BE PUMPED FROM THE NORTHWEST CORNER SUMP. THE CONTRACTOR SHALL NOTIFY THE OWNER'S REPRESENTATIVE BEFORE CONTACT WATER GETS ABOVE ELEVATION 1716 FT.

3. THE APPROXIMATE DISTANCE FROM THE TOPSOIL BORROW AREA TO THE SOUTH CELL CLOSURE EXTENTS IS 0.6 MILES ONE-WAY.

4. THE CONTRACTOR IS RESPONSIBLE FOR MAINTAINING HAUL ROADS BETWEEN THE SOUTH CELL, RIVER, WATER SOURCE, DEPOSITION LOCATIONS, WATER DISCHARGE LOCATIONS, AND BORROW AREAS TO PROVIDE ADEQUATE ACCESS THROUGHOUT CONSTRUCTION.

5. CARE SHALL BE TAKEN WHEN WORKING IN AND AROUND THE BOTTOM ASH IMPOUNDMENT SOUTH CELL TO AVOID DAMAGE TO THE LINER SYSTEM, PROTECTIVE COVER, OR SUMP SYSTEM. CONTRACTOR IS RESPONSIBLE FOR MARKING ANY DAMAGE AND FOR INFORMING THE OWNER OF DAMAGE AS SOON AS POSSIBLE. CONTRACTOR IS RESPONSIBLE FOR REPAIRS TO LINER, PROTECTIVE COVER, OR SUMP SYSTEM DAMAGED AS A PART OF PERFORMING THIS SCOPE OF WORK.

6. CONTRACTOR IS RESPONSIBLE FOR CONSTRUCTING RAMPS AND/OR ACCESS ROADS OVER GEOMEMBRANE-LINED SLOPES TO PROTECT THE SUMP AND LINER SYSTEM IN THE SOUTH CELL. PROTECTIVE COVER SHALL BE MAINTAINED AT A MINIMUM THICKNESS OF THREE (3) FEET AND AS APPROVED BY THE OWNER'S REPRESENTATIVE.

7. BOLLARDS, PILLARS/PEDESTALS, AND THEIR FOUNDATIONS AROUND THE SOUTH CELL ARE TO BE CUT AND REMOVED TO GRADE BY OTHERS PRIOR TO THE START OF WORK. IF ANY BELOW GRADE STRUCTURES ARE ENCOUNTERED DURING THE EXECUTION OF THIS WORK, THE CONTRACTOR SHALL REMOVE AND DISPOSE OF MATERIALS IN THE BOTTOM ASH IMPOUNDMENT SOUTH CELL AS APPROVED BY THE OWNER'S REPRESENTATIVE.

ANALYSIS REPORT

Method Summaries *Test method information available upon request.*

S(T) and C(T): Total sulfur and total carbon by LECO, Method CSA06V
S(SO4): Sulfate by HCl digestion with ICP finish, Method CSA07V
S(S2-): Sulfide by calculation of S(T) - S(SO4)

TIC: Total inorganic carbon by coulometry, Method CSB02V
AP: Acid generating potential based on sulfide sulfur
NP: Modified neutralisation potential by excess acid addition and back titration to pH 8.3
Net NP: Net neutralisation potential = NP - AP
NPR: Neutralisation potential ratio = NP/AP

Metals by Aqua regia digest with ICP-OES/MS finish, Method ICP21B20/ICM21B20
Metals by multi-acid digest with ICP-OES/MS finish, Method ICP40Q12/IMS40Q12
Tessier Sequential Extraction - method available on request

Quantitative X-Ray Diffraction by Rietveld Refinement

Report Prepared for:	*WSP USA Inc* *7245 West Alaska Druive, Suite 200 Lakewood, CO 80226, USA*
Project Number/ LIMS No.	*20191-02/MI7023-AUG25*
Sample Receipt:	*August 28, 2025*
Sample Analysis:	*August 28, 2025*
Reporting Date:	*December 3, 2025*

Instrument:	Panalytical X'pert Pro Diffractometer
Test Conditions:	Co radiation, 40 kV, 45 mA Regular Scanning: Step: 0.033°, Step time:0.15s, 2θ range: 5-80° Clay Section Scanning: Step: 0.02°, Step time:0.5s, 2θ range: 3-40°
Interpretations :	PDF2/PDF4 powder diffraction databases issued by the International Center for Diffraction Data (ICDD). Diffrac Eva and Topas software.
Detection Limit :	0.5-2%. Strongly dependent on crystallinity.

Contents:

1) Method Summary
2) Quantitative XRD Results
3) XRD Pattern(s)

Zhihai (Adrian) Zhang, Ph.D.
Mineralogist

Huyun Zhou, Ph.D., P.Geo.
Senior Mineralogist

Method Summary

Mineral Identification and Interpretation:

Mineral identification and interpretation involves matching the diffraction pattern of an unknown material to patterns of single-phase reference materials. The reference patterns are compiled by the Joint Committee on Powder Diffraction Standards - International Center for Diffraction Data (JCPDS-ICDD) database and released on software as Powder Diffraction Files (PDF).

Interpretations do not reflect the presence of non-crystalline and/or amorphous compounds, except when internal standards have been added by request. Mineral proportions may be strongly influenced by crystallinity, crystal structure and preferred orientations. Mineral or compound identification and quantitative analysis results should be accompanied by supporting chemical assay data or other additional tests.

Clay Mineral Separation and Identification:

Clay minerals are typically fine-grained (<2 µm) phyllosilicates in sedimentary rock. Due to the poor crystallinity and fine size of clay minerals, separation of the clay fraction from bulk samples by centrifuge is required. A slide of the oriented clay fraction is prepared and scanned followed by a series of procedures (the addition of ethylene glycol and high temperature heating). Clay minerals are identified by their individual diffraction patterns and changes in their diffraction pattern after different treatments. Clay speciation and mineral identification of the bulk sample are performed using Diffrac Eva (Bruker).

Quantitative Rietveld Analysis:

Quantitative Rietveld Analysis is performed by using Diffrac Topas 7 (Bruker), a graphics based profile analysis program built around a non-linear least squares fitting system, to determine the amount of different phases present in a multicomponent sample. Whole pattern analyses are predicated by the fact that the X-ray diffraction pattern is a total sum of both instrumental and specimen factors. Unlike other peak intensity-based methods, the Rietveld method uses a least squares approach to refine a theoretical line profile until it matches the obtained experimental patterns.

Rietveld refinement is completed with a set of minerals specifically identified for the sample. Zero values indicate that the mineral was included in the refinement calculations, but the calculated concentration was less than 0.05wt%. Minerals not identified by the analyst are not included in refinement calculations for specific samples and are indicated with a dash.

DISCLAIMER: This document is issued by the Company under its General Conditions of Service accessible at http://www.sgs.com/en/Terms-and-Conditions.aspx. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein. Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. TOTAL	100	100	100	100	100

Zero values indicate that the mineral was included in the refinement, but the calculated concentration is below a measurable value.

Dashes indicate that the mineral was not identified by the analyst and not included in the refinement calculation for the sample.

The weight percent quantities indicated have been normalized to a sum of 100%. The quantity of amorphous material has not been determined.

Mineral/Compound	Formula

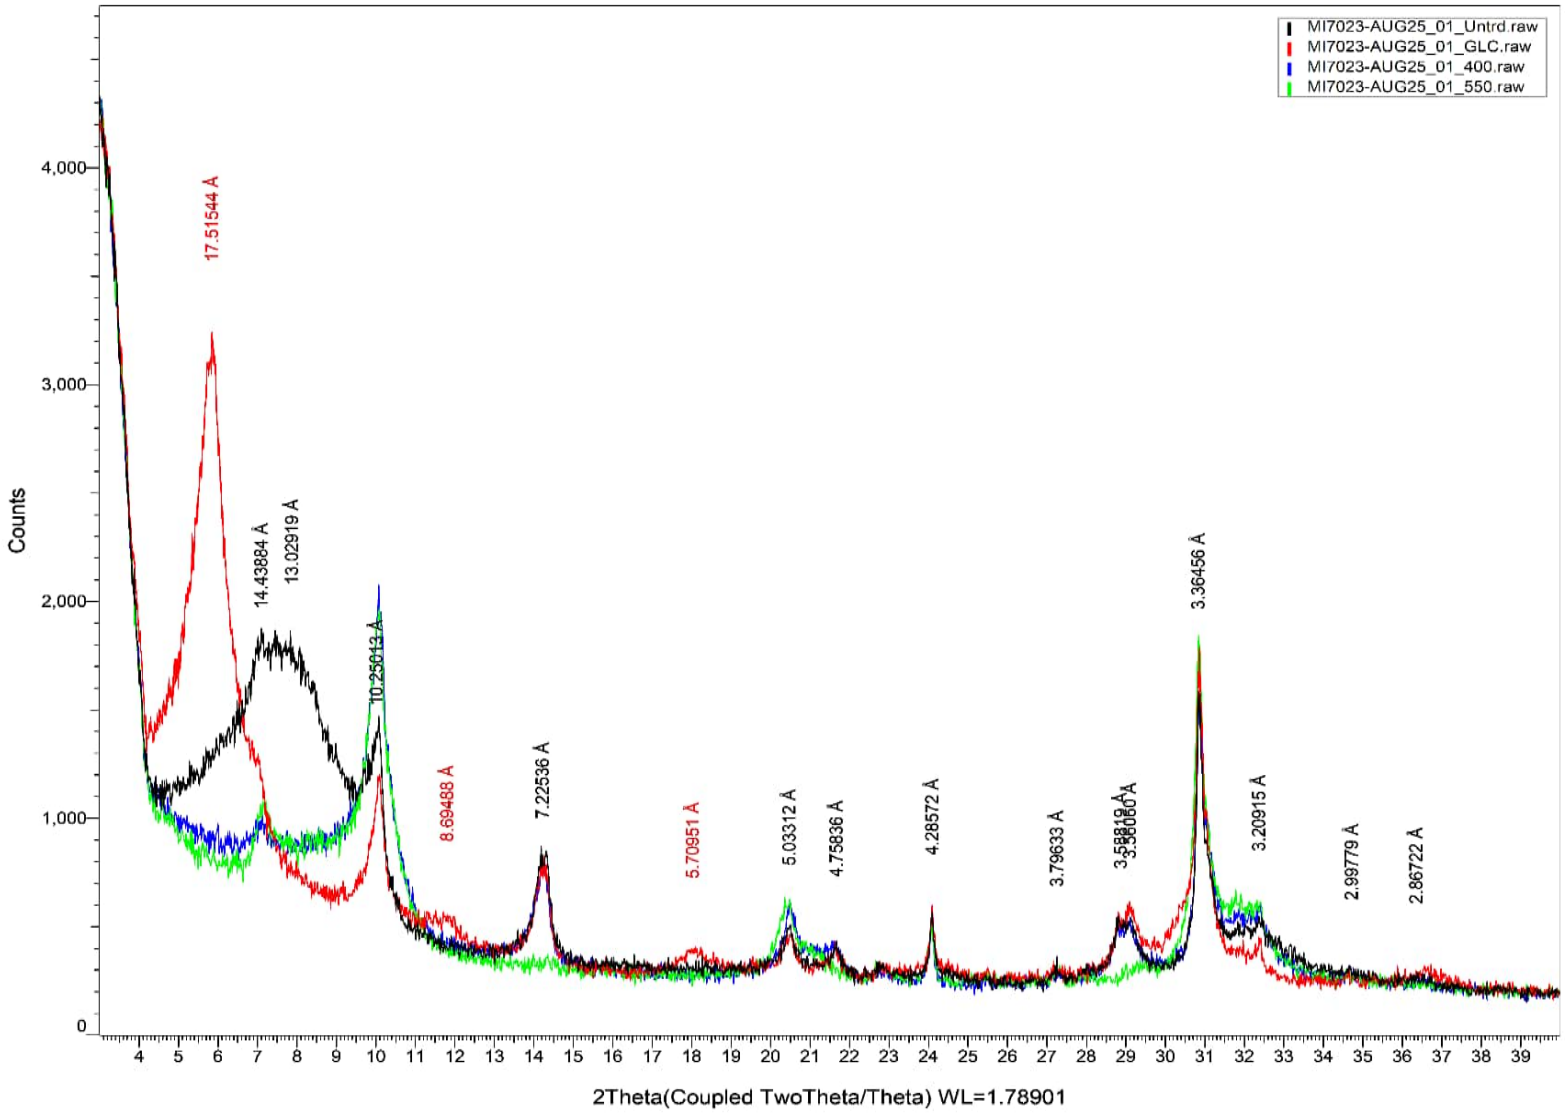
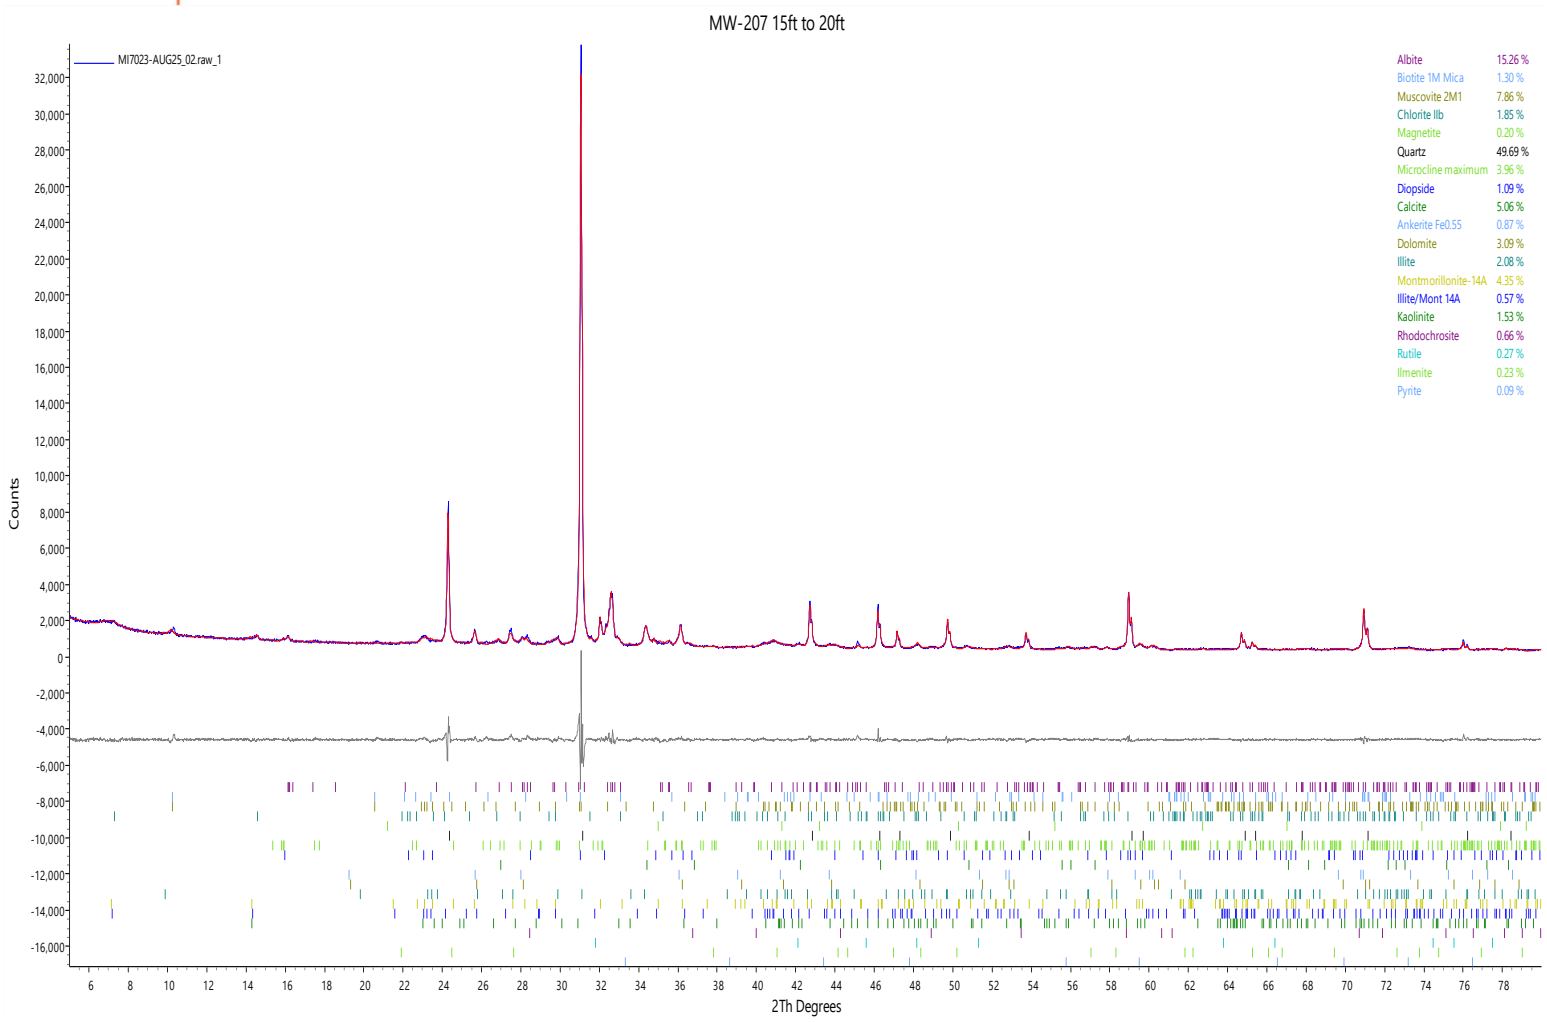
Clay					
Illite	2.3	5.6	5.3	2.2	4.1
Illite-Montmorillonite	0.7	0.3	0.1	0.0	0.0
Montmorillonite	5.7	8.8	2.8	1.1	6.8
Kaolinite	1.6	1.1	0.3	0.4	1.6
TOTAL	100	100	100	100	100

Zero values indicate that the mineral was included in the refinement, but the calculated concentration is below a measurable value.



Dashes indicate that the mineral was not identified by the analyst and not included in the refinement calculation for the sample.



The weight percent quantities indicated have been normalized to a sum of 100%. The quantity of amorphous material has not been determined.

Mineral/Compound	Formula
Quartz	SiO_2
Albite	$NaAlSi_3O_8$
Microcline	$KAlSi_3O_8$
Biotite	$K(Mg,Fe)_3(AlSi_3O_{10})(OH)_2$
Muscovite	$KAl_2(AlSi_3O_{10})(OH)_2$
Chlorite	$(Fe,(Mg,Mn)_5,Al)(Si_3Al)O_{10}(OH)_8$
Diopside	$CaMgSi_2O_6$
Calcite	$CaCO_3$
Magnetite	Fe_3O_4
Ankerite	$CaFe(CO_3)_2$
Dolomite	$CaMg(CO_3)_2$
Rhodochrosite	$MnCO_3$
Rutile	TiO_2
Ilmenite	$FeTiO_3$
Pyrite	FeS_2
Amphibole	$(Na,K)Ca_2(Fe,Mg)_5(Al,Si)_8O_{22}(OH)_2$
Fluorapatite	$Ca_5(PO_4)_3F$
Gehlenite	$Ca_2Al(AlSi)O_7$
Pyrrhotite	Fe_8S_9
Illite	$(K,H_3O)(Al,Mg,Fe)_2(Si,Al)_4O_{10}[(OH)_2,(H_2O)]$
Illite-Montmorillonite	$KAl_4(Si,Al)_8O_{20}(OH)_4 \cdot 8H_2O$
Montmorillonite	$(Na,Ca)_{0.3}(Al,Mg)_2Si_2O_{10}(OH)_2 \cdot nH_2O$
Kaolinite	$Al_2Si_2O_5(OH)_4$
